Selecting a Psychology Internship

An internship is only a year long, but it plays a major role in professional development. Every year, graduate students spend large amounts of time and money to examine internship sites, and many move long distances for what may be a single year of training. There are spirited debates across the country about the necessity of this system and the way it functions. Yet the internship has been an integral part of training since the Boulder conference in 1947, which established the scientist-practitioner model as the basis for professional self-definition of Clinical and Counseling Psychologists. Internship is a year when you can work in a setting primarily designed to provide direct health care services to patients, rather than those primarily designed to provide training. On internship you can use empirically-supported approaches, and you can work with problems for which there currently are no empirically-supported treatments. You can sharpen clinical and counseling skills, generate research ideas, and, if you choose, conduct clinically-relevant research. You will function at a new level of professional responsibility on internship, making a major transitional step in your journey from student to independent professional.

It is important that you think carefully about where you apply for internship. Do your interests fit the training philosophy, strengths, and values of the internship? Does this institution give you the kind of training you need for the career you want? Would you consider working for this institution? Would your knowledge generalize to other institutions or public service settings where you may want to work? Does the program provide the kind of environment that will allow you to thrive personally as well as professionally? Once you know what you are looking for, you will find that many internship sites could help you meet your goals.

The purpose of this brochure is to describe the internship program at the VA Palo Alto Health Care System and the training experiences offered. Our program has been continually accredited by the [American Psychological Association](#) (APA) since 1977 (our next accreditation site visit is scheduled for 2023). We have a complex, multi-faceted program, which can provide many kinds of training experiences. We believe it is one of the strongest internships in the country. At the same time, no internship program is perfect for everyone; you will be seeking the best match for your own interests and needs, just as we will be seeking the best matches for our program. We hope this brochure can help you decide whether you want to learn more about Palo Alto by being in more direct, personal contact with us.

"I have truly enjoyed my internship at VA Palo Alto, and feel like the skills I have learned and the experiences I have had here have helped me to develop a greater sense of professional identity and a clearer idea of what I want in a future career." ~Recent intern

You might wonder why the [Department of Veterans Affairs](#) would pay several million dollars a year across the country to fund psychology internship positions. Part of the answer is that training prepares staff who might work for the VA system. It gives VA an opportunity to develop a pool of psychologists experienced with the system and with the kinds of patients and problems that are common in VA. However, the training mission of VA is broader, and VA is explicitly committed to training for the nation, as well as for the VA system. We train interns who go on to VA jobs, and we train interns who go on to work in academia, other medical centers, the private sector, etc. The whole profession of Psychology and the whole health care system in this country are served by having well-trained, enthusiastic, and creative professionals. We strive to support VA's training mission, for VA's specific goals and for the nation.

Psychology Training Model and Philosophy

The VA Palo Alto Health Care System provides a particular kind of training, based on our view of the role of Psychology in the VA system. Specifically, we are committed to the **scientist-practitioner model** of psychology, and the internship training experience is organized accordingly. The internship program at VA Palo Alto is a member of the [Academy of Psychological Clinical Science](#), which is a coalition of doctoral training programs and internship sites that share a common goal of producing and applying scientific knowledge to the assessment, understanding, and amelioration of human problems. Our membership in the Academy indicates that the Internship Program at VA Palo Alto is committed to excellence in scientific training and to using clinical science as the foundation for designing, implementing, and evaluating assessment and intervention procedures. We place a high emphasis on training in the flexible application of evidence-based therapies and a scientifically-based approach to the treatment of Veterans and active-duty service members with complex medical and psychological presentations.

Palo Alto has extensive strengths in training. We have a **large staff of distinguished psychologists** who represent a broad range of areas of expertise and are **dedicated to training and supervision** of our future psychology colleagues. Supervision at Palo Alto emphasizes a developmental approach, evidence-based practice, and overall professional development within a **supportive, training-focused environment**. Palo Alto supervisors represent a range of theoretical orientations, with a preponderance of CBT, “third-wave,” and integrative approaches. Supervisors are highly invested in interns’ professional development and provide a supportive yet challenging training environment. We are committed to providing training that **values connection and relationships** between supervisors and interns, among team members, and within the internship class.

Recent or selected training program and staff awards and distinctions include:

- Director of Training Award, 2016 – VA Psychology Training Council (VAPTC) Antonette and Robert Zeiss Award for Outstanding Contributions to VA Psychology Training
- Outstanding Director of Training, 2008 – American Psychological Association, Division 18 (Veterans Affairs Section)
- Excellence in Behavioral Medicine Training Program Award, 2012 – Society of Behavioral Medicine
- Outstanding Training Program Award, 2000 – American Association of Behavioral Therapy (AABT, now ABCT)
- Recent and current presidents/chairs of the VA Psychology Training Council, Association of VA Psychology Leaders, International Society of Traumatic Stress Studies, and Society of Clinical Geropsychology (APA Division 12, Section II)
- Other leadership roles in multiple national professional organizations, including the Association of Behavioral and Cognitive Therapies, APA Division of Psychologists in Public Service (Division 18), APA Division of Rehabilitation Psychology (Division 22), Society of Clinical Psychology (APA Division 12), Society of Clinical Geropsychology (APA Division 12, Section II), Society for the Psychology of Women (APA Division 35), Society for Clinical Neuropsychology (APA Division 40), National Academy of Neuropsychology (NAN), and the VA Psychology Training Council (VAPTC)
- National psychology roles also include serving as APA Accreditation Site Visitors, journal editors, and editorial board members
- Multiple national trainers in VA evidence-based psychotherapies dissemination (e.g., CPT, PE, CPT-CP, CBT-I, CBT-SUD, ACT for Depression, PST) and the Motivational Interviewing Network of Trainers (MINT)
- Fellow status in the American Psychological Association and the Gerontological Society of America

- Recent APA Division 18 (Psychologists in Public Service, VA Section) Awards – Dr. Carey Pawlowski, 2019 Outstanding Supervisor or Mentor; Dr. Tiffanie Sim Wong, 2018 Outstanding Clinician
- Attainment of new Board Certification in Clinical Psychology, Clinical Health Psychology, Clinical Geropsychology, Clinical Neuropsychology, and Rehabilitation Psychology by 11 staff psychologists in since 2014

*“Palo Alto is indeed a special place, made so by so many who are dedicated and committed to training – but, more importantly, to serving Veterans. Personally, this has been a transformative year.”
~Recent intern*

Perhaps more than any other psychology internship program in the nation, Palo Alto has numerous opportunities for training in a **wide variety of settings** and, therefore, the program is able to offer a **training experience individualized to the particular intern’s training needs and goals**. There are rotations for training in psychological and neuropsychological assessment, and for training in interventions with adults and families in geriatric settings, medically-based settings including primary care and physical

rehabilitation, inpatient and outpatient mental health settings, and residential PTSD and substance use treatment settings. There are opportunities to do clinical research, either as part of rotations that are primarily clinically-focused, or in rotations that emphasize health services research, program evaluation and implementation/dissemination, or translational research. These experiences are intended to supplement and complement training experiences obtained in your graduate program. Our limitations include few clinical opportunities to see children, except as part of family treatment, or to work with developmentally disabled adults. In addition, although women Veterans increasingly use the VA system for their health care and behavioral health needs, there is clearly more work with men than with women in any VA internship.

Our program is committed to general clinical training in the internship year, but within that model there are opportunities for **special emphasis areas**. Some of these are represented by our training tracks: behavioral medicine, geropsychology, clinical neuropsychology, and geriatric neuropsychology. Other training emphases often sought by interns include: PTSD/trauma, traumatic brain injury and cognitive rehabilitation, rehabilitation psychology, serious mental illness, and substance use disorders. All of the track-related training and other training rotations are described more fully in this brochure.

In this introduction we describe the Training Program procedures such as application, selection, and how the program is organized. We also discuss our philosophy of training and expectancies about competencies that interns will acquire. The next sections describe the training sites, including specific details on program structure, patient population, theoretical orientation of the supervisor, and the nature of supervision for each training site. The appendix includes a listing of all the psychologists in the training program, with brief biographical sketches. *Tip:* You may find it most useful to read the introduction of the brochure and then peruse specific track and rotation descriptions of interest to find out if VA Palo Alto is a good fit for your training goals.

This brochure also contains a brief section on Psychology Postdoctoral Training within Psychology Service which is more fully described in the complete Postdoctoral Training Brochure, which can be found on the Psychology Training website. Some information is included here because we know that the availability of postdoctoral options is often important information for intern applicants when considering ranking decisions.

VA Palo Alto Health Care System Facilities

VA Palo Alto is part of a national network of hospitals and clinics operated by the Department of Veterans Affairs to provide comprehensive health care to men and women who have served in the armed forces. This health care system is responding to many national changes in the health care field; our training program changes in concert with the changing organization and emphases of health care.

The Veterans Affairs Palo Alto Health Care System ([VAPAHCS](#)) is a teaching hospital, providing a full range of patient care services across 10 different hospital/clinic sites, with state-of-the-art technology as well as education and research. As of July 2020, this health care system has over 7000 employees and volunteers, is located on more than 300 acres, and operates on a large annual budget of over \$1B. Our health care facilities operate 808 inpatient beds, including three Community Living Centers (formerly known as nursing homes) and a 100-bed homeless domiciliary, and over 50 primary care and specialty outpatient clinics, serving over 67,000 enrolled Veterans. Internship training sites are available at four campuses within the health care system (Palo Alto, Menlo Park, San Jose, and Livermore), with the great majority concentrated in the Palo Alto Division and the Menlo Park Division. The Palo Alto and Menlo Park Divisions are separated by 7 miles (15 minutes by car or shuttle).

The VAPAHCS is affiliated with the [Stanford University School of Medicine](#) and shares training programs for medical residents in psychiatry, medicine, surgery, rehabilitative medicine, and other medical specialties. In addition to these and the psychology training program, VAPAHCS also has training programs for audiology/speech pathology, dentistry, dietetics, hospital management, nursing, pharmacy, social work, recreation therapy, occupational therapy, and optometry. Over 1500 students, interns, fellows, and residents are trained each year across these multiple disciplines. Psychology operates in an interprofessional, collegial fashion with other disciplines, and interns obtain training and clinical experience in interprofessional work. The Psychology Internship Program is operated by Psychology Service, which reports to the Associate Chief of Staff for Mental Health Services. Psychology Service is a voting member of the Executive Review Board, and Psychology Service professional staff members have medical center privileges.

In addition to basic medical and mental health care programs, this VA has a variety of specialized regional programs, including a Polytrauma Rehabilitation Center, a Spinal Cord Injury Center, the Western Region Blind Rehabilitation Center, the National Center for PTSD (NCPTSD), the Men's and Women's Trauma Recovery Programs, the Homeless Veterans Rehabilitation program, a Geriatric Research, Educational, and Clinical Center (GRECC), and a Mental Illness Research, Education, and Clinical Center (MIRECC). Special psychological programs are available in health psychology, geropsychology, inpatient and outpatient psychiatric care, drug and alcohol treatment, and brain injury rehabilitation. Training opportunities are available in all of these programs.

VAPAHCS maintains one of the top three research program in VA and is a national leader in research. VA Palo Alto encompasses extensive research centers in geriatrics (GRECC), mental health (MIRECC), Alzheimer's disease (Stanford/VA Alzheimer's Research Center), spinal cord regeneration, schizophrenia, and post-traumatic stress disorder (National Center for PTSD). VAPAHCS also manages several centers supported by the VHA Office of Research and Development, including the Rehabilitation Research and Development Service, Health Services Research and Development (HSR&D) Center for Innovation to Implementation (Ci2i), Program Evaluation and Resource Center (PERC), and Health Economics Resource Center (HERC). Training resources are available for research or consultation at these and other programs.

VA Palo Alto has received numerous awards and recognitions in recent years, including the following:

- **2013 “Leadership in Excellence” Secretary of Veterans Affairs’ Robert W. Carey Performance Excellence Award.** VA Palo Alto HCS was awarded the Secretary of Veterans Affairs 2013 “Leadership in Excellence” Robert W. Carey Performance Excellence Award for implemented management approaches that resulted in sustained high levels of performance.

- **2014 California Awards for Performance Excellence (CAPE)TM Eureka Award.** The California Council for Excellence (CCE) awards the 2014 California Awards for Performance Excellence (CAPE) Eureka Award, the highest recognition for performance excellence in the state, to VA Palo Alto HCS for the silver level.
- **2014 Most Wired.** VAPAHCS was named "Most Wired" and is listed among HealthCare's 2014 Most Wired hospitals, by Hospitals and Health Networks.
- **2016 VA Secretary's Award for Outstanding Achievement to Homeless Veterans.** VAPAHCS Domiciliary Service received this nation-wide recognition from the Secretary of Veterans Affairs.

Psychology Internship Program Funding, Benefits, and Eligibility

The Psychology Internship Program is funded by the Office of Academic Affiliations of the Department of Veterans Affairs Central Office as an annual, earmarked allocation to the medical center. The current annual internship stipend at VA Palo Alto is \$31,831. This stipend requires a full calendar year of training; our start date is in late August each year. For the 2021-2022 year, the start date will be Monday, August 30, 2021. VA provides health care benefits for interns and postdoctoral fellows as for any other VA employee. Health benefits are also available to dependents and married spouses of interns and fellows, including to legally married same-sex spouses of interns and fellows. Unmarried partners are not eligible for health benefits, even those in legal civil unions or domestic partnerships. Insurance programs can be selected from a wide array of options. More information about VA stipends and benefits are available at www.psychologytraining.va.gov/benefits.asp.

Our training is geared to advanced level predoctoral students completing their doctoral degree from an American Psychological Association (APA)- or Canadian Psychological Association (CPA)-accredited clinical, counseling, or combined psychology program or PCSAS-accredited Clinical Science program, or to students who previously obtained psychology doctoral degrees and are now obtaining training for re-specialization in clinical or counseling psychology. Eligibility requirements for VA internships are determined nationally and we have no authority to over-ride these requirements locally. All information about VA eligibility requirements is available at www.psychologytraining.va.gov/eligibility.asp and www.psychologytraining.va.gov/docs/Trainee-Eligibility.pdf; please read these eligibility requirements carefully prior to applying to make sure you are eligible for a VA internship, including U.S. citizenship, health requirements, background investigations, and Selective Service registration. The training program may be released from a Match with an intern candidate due to the candidate not meeting all pre-employment requirements for hiring.

The number of internship positions available at VA Palo Alto is 15. For the coming year (2021-2022), seven of the 15 funded slots are labeled "general" slots and provide broad training, usually with considerable emphasis on PTSD, serious mental illness, and/or substance use disorders. Three other positions emphasize training in Geropsychology (including one position reserved for the Geriatric Neuropsychology track), and four positions emphasize Behavioral Medicine experience. Finally, one more position is designated for an emphasis in Clinical Neuropsychology. Each of these programs has a unique APPIC Match Number (below). Please see [next section](#) for more details on VA Palo Alto training tracks.

"Overall, the internship experience at Palo Alto surpassed my expectations. I was surprised at the warm interpersonal relationships cultivated with supervisors and the extent to which intern interests/goals guided the work assigned." ~Recent intern

Psychology Internship Structure at VA Palo Alto

The internship consists of a calendar year of full-time, supervised training, beginning in the last week of August each year. Training is based on a 40-hour work week (8:00am – 4:30pm Monday through Friday), so the total hours over a year come to 2,080. Out of those 2,080 hours, there is time off for vacation (13 days), illness (up to 13 days), Federal holidays (10 days, plus unplanned holidays, e.g., national day of mourning), and authorized absence for professional activities (up to 10 days).

The internship year is divided into two six-month periods. Within each six-month block, interns typically spend half-time at each of two sites (e.g., half time in the Mental Health Clinic and half time at the Hospice program). Occasionally, interns may do two full-time three-month rotations during a six-month period (e.g., 3 months in an Inpatient Psychiatry Unit and 3 months at the Trauma Recovery Program). Interns typically spend 25% to 37% of their time in direct service throughout the year (10-15 hours weekly) and receive at least 4 hours per week of supervision from psychology supervisors, at least 2 hours of which are individual, face-to-face supervision. The typical rotation schedule for the year can be represented by the table below:

First Rotation (August- February)	Second Rotation (February-August)
Rotation 1 – half-time	Rotation 3 – half-time
Rotation 2 – half-time	Rotation 4 – half-time

There also are optional mini-rotations that require 3 to 6 hours per week. Electing mini-rotations generally requires adding additional hours to the 40-hour work week, because the half-time primary rotations are already full training experiences and take precedence over mini-rotations. Some but not all possible mini-rotations are laid out in this brochure, since they are often individually tailored to meet specific intern training interests and needs. Examples of mini-rotations in recent years include learning about grant writing, doing research on anxiety in older adults, or carrying a long-term psychotherapy case. If you have an idea about a mini-rotation that you might be interested in doing, raise it with the Director of Training if you are invited for an interview.

You will have the opportunity to participate in the assignment of your rotations. We do not have a pre-set pattern of rotations for any of the training tracks. Each intern's year is designed, in collaboration with the Director of Training, to fit the intern's training needs and interests, as balanced with the expectations and resources of the program. Discussion of this process will be emphasized during your visit or in phone interviews, if you are invited for an interview. Final rotation assignments will be determined after the intern Match, sometime in the spring before internship begins.

In addition to training assignments, interns have Wednesday afternoons set aside for an intern seminar series throughout the year. That takes 4 hours each week, so each "half-time" rotation is actually 18 hours. In addition, some interns are involved in optional mini-rotations or research projects at their rotation sites that require additional time and

"This internship is an excellent training program, very well-organized and well-run. I feel so lucky to have been a VA Palo Alto intern. The internship provided me with a variety of clinical experiences that built upon my prior work and also challenged me to learn new areas. In addition, the research rotation has been very useful in giving me an understanding of what life as a VA researcher might look like." ~Recent intern

effort. Thus, it is usually difficult to work everything into the time allotted. Like staff, you get paid for 40 hours, no matter how much time you put in. Most staff do not get their work done in the allotted 40 hours, and we suspect you will not either. A key notion in VA is that we are a “Service,” not a department. To serve patients we must be available, and you will see considerable emphasis on being available, even if that means staying beyond your usual ending time occasionally. See below for a breakdown of a typical intern workweek for interns in clinical rotations (note that the focus on assessment and various therapy experiences will vary by rotation):

Supervision & Training	10
Individual (face to face) Super. with Primary Supervisor	2
Group Supervision with Primary Supervisor	1
Individual (face to face) Super. with Delegated Supervisor	
Group Supervision with Delegated Supervisor	1
Training Activities (e.g., Seminar, Case Conf., Didactics)	6
Professional Services Performed (Direct service)	15
Individual Psychotherapy	4+
Couples and/or Family Therapy	
Group Psychotherapy	3+
Testing & Assessment	(4+)
Intake assessment	2
Consultation/Education	1
Community meetings	
Treatment team planning	3
Case management	2
Providing supervision/teaching of trainees	
Other Work Performed	15
Staff Meeting	2
Administrative Duties (e.g., writing notes, documentation)	13
Research	
Other Prof. Activities _____	

On the other hand, this is not a 60-hour per week or more internship. You will work at least 40 hours intensively each week. How much more than that you work depends on many factors, including your interest in additional training experiences, your research involvement, how time-effective you are in completing clinical documentation, etc. The Director of Training will help you plan a realistic program that balances taking advantage of training opportunities with time for a full, rich life outside of work.

Internship Training Tracks

As indicated previously, interns are matched to one of 5 training tracks (General, Geropsychology, Behavioral Medicine, Clinical Neuropsychology, Geriatric Neuropsychology). All interns in the *General training track* must spend at least 25% of their training time, or one rotation, focusing on work in a medically-based setting and/or with older adults. Typically, general track interns meet this expectation by selecting one half-time, six-month rotation in a site emphasizing health psychology and/or Geropsychology chosen from rotations described under “[Geropsychology Training](#)” or “[Psychological Services for Medically-Based Populations](#).” Interns in the *Geropsychology, Clinical Neuropsychology, and Behavioral Medicine* tracks spend fifty percent of their training time (2 of 4 rotations) throughout the year with the relevant emphasis area. Interns in the recently designed *Geriatric Neuropsychology* track spend fifty percent of their training time (2 of 4 rotations) with neuropsychological assessment including with older adults, and a third rotation emphasizing intervention and treatment with older adults. All interns are also

required to choose one out of their 4 rotations in a site emphasizing work with serious or chronic mental illness chosen from rotations described under [Outpatient Mental Health Treatment Programs](#),” “[Inpatient Psychiatry and Serious Mental Illness](#),” or “[Specialty Mental Health Treatment Programs](#).” Outside of these requirements, all interns can choose from rotations in any area (e.g., a neuropsychology intern can choose to work in an Inpatient Psychiatry unit, a behavioral medicine intern can choose to work in a geropsychology rotation, a geropsychology intern can work in Addiction Treatment). In other words, regardless of training track, all training rotations are available to be chosen by any member of the intern class, and there can be considerable overlap in the rotation schedules of each member of the intern class. Thus, all interns get broad-based, generalist training that meets the program’s [training aims](#). In addition, the Geropsychology, Clinical Neuropsychology, Geriatric Neuropsychology, and Behavioral Medicine tracks prepare interns for clinical and/or research careers in geropsychology, neuropsychology, and health psychology, as well as for future Board Certification in these specialty areas. Please see subsequent sections describing training rotations for more details on available rotations. The selection of specific rotations are discussed between the Director of Training and Matched interns in the spring before the internship begins.

Intern Seminars and Meetings

Intern seminars are weekly and scheduled on Wednesday afternoons. Early in the training year, seminars are scheduled by the Director of Training and staff on the Seminar Committee. Each intern class selects representatives to the committee. As the year proceeds, interns have opportunities to decide on seminar topics and speakers. Interns evaluate each seminar speaker and topic, so the Committee has considerable data on who is available to speak and whether previous audiences have found their presentations valuable. The overarching goal in Seminar is to obtain training on topics essential to practice as a Psychologist, such as legal and ethical issues, handling patients in crisis, multicultural competence, and the interaction between research and clinical practice. We emphasize continual examination of what current research findings are relevant to clinical practice and what experiences in clinical practice might prompt valuable research questions. We also emphasize topics that support and promote interns’ professional development during this year of transition from student to professional, and topics which may broaden interns’ knowledge base of different clinical models and applications. Please see below for a selected list of seminar topics from a typical training year.

“I appreciated all of the seminars on professional development (e.g., career paths, financial planning, work-life balance). I also enjoyed the multi-day didactics in which I could really learn more deeply about a specific treatment modality.” “Everything [in the seminar series] felt extremely useful. I thought the variety of topics presented and the range of formats kept things interesting and fun. It was a great learning experience.” ~Recent interns

Basic Issues in Clinical Management

- Legal Issues – Tarasoff/risk management, child and elder abuse reporting, competency evaluations
- Suicide assessment and prevention
- Prevention and management of disruptive behavior
- Basics of firearms and evaluating for safety
- Dynamics of interpersonal violence
- Psychopharmacology

Multicultural Competence

- Understanding military culture
- Overview of Multicultural Psychology
 - Multidimensional assessment
 - Clinical applications
 - Experiences of microaggressions

Professional Development

- Postdoctoral decision-making
- Postdoctoral panels – clinical, research
- Vita preparation and interviewing skills
- Licensing information and process
- Integrating personal and professional lives
- Becoming a supervisor
- Financial planning for early career professionals
- Issues of early career psychologists
- Job search process and job negotiation skills

Clinical Models and Applications

- Motivational Interviewing (MI)
- Overview of Group Therapy
- Couple and Family therapy approaches
- Mindfulness-based approaches

<ul style="list-style-type: none"> • Cultural considerations in assessment • Clinical issues with lesbian, gay, and bisexual clients • Working with LGBT couples • Sexuality and disability • Promoting women's sexual wellness • Spirituality and mental health • Aging and mental health issues in older adults • Mental health care of transgender and gender nonconforming clients 	<ul style="list-style-type: none"> • Dialectical Behavior Therapy (DBT) • Acceptance and Commitment Therapy (ACT) • Cognitive Processing Therapy (CPT) • Prolonged Exposure (PE) • Functional Analytic Psychotherapy (FAP) • Integrative approaches and treatments • Compassion-focused therapies • Behavioral interventions for sleep problems • Assessment and interventions for substance use disorders • Unified Protocol for transdiagnostic treatment of emotional disorders
<p><i>Other Special Topics</i></p> <ul style="list-style-type: none"> • Ethical issues at the end of life • Ethical issues and the use of social media • Moral injury • Understanding and managing sexual behaviors in the therapy relationship • Clinical issues in forensic psychology • Policy and advocacy in psychology • Using technology and mobile apps in clinical practice • Dissemination and implementation science 	<p><i>Careers in Psychology</i></p> <ul style="list-style-type: none"> • Academic job panel • Job panel – clinical positions and private practice • Job panel – academically-affiliated medical centers • Non-traditional careers in psychology

California Psychology licensing law requires that psychologists have specific training in Human Sexuality, Child Abuse Assessment and Reporting, Partner/Spousal Abuse Assessment and Treatment, Aging and Long-term Care, and Substance Dependence Assessment and Treatment. With the exception of Partner/Spousal Abuse training (requiring 15 hours), we provide each of these classes during the year for you to attend. More information about licensure in California can be found at www.psychboard.ca.gov. Licensed psychologists in California are required to have continuing education; we are accredited by APA to provide that training, and most CE training for staff is open to interns and postdoctoral fellows. Each year there are several full-day CE conferences at the VA Palo Alto Health Care System attended by interdisciplinary staff and open to interns and postdoctoral fellows; topics vary from year to year though typically include topics such as supervision and legal/ethical issues in the practice of psychology.

In addition, several VA research centers such as the National Center for PTSD, GRECC, MIRECC, and Health Services Research, as well as Stanford Department of Psychiatry, have their own seminar series or grand rounds that are open to interns and fellows. Finally, many rotations have didactic seminars as part of their clinical training. Please reference descriptions of individual training sites for specific types of didactic opportunities offered.

“The structure and support of the internship program provided a solid and reliable foundation that enabled me to grow professionally and personally in a complex medical setting. The program did an excellent job of fostering cohesion in our cohort and providing opportunities such as the internship support group and the seminar series for us to build supportive relationships with one another.” ~Recent intern

Intern Group

The training program contracts with a clinical psychologist from outside the training program to run a weekly group for the interns. This is an optional training experience which takes place in additional time outside the basic 40-hour week, for interns who choose to be involved. A main purpose is to be a support group for interns, most of whom are new to the area as well as to each other. In addition, the group provides an opportunity to learn more about group process by being a participant, should interns wish to do so. Beyond arranging for the group facilitator and reviewing anonymous evaluations at the end of the year to ensure that we are providing a valuable experience, no training program staff, including the Director of Training, has anything to do with the operation of this group. It is directed by the facilitating psychologist and the participating interns themselves.

Research Opportunities and Mentoring

While participating in research is not a requirement of the internship program, there are many research opportunities here, and interns who have completed their dissertations are in an especially good position to take advantage of them. In general, having your dissertation completed will enable you to enjoy internship more and be able to concentrate better on training and other opportunities here. A number of training sites are excellent models of scientist-practitioner functioning, in which clinical work continually guides ongoing research, and in turn the research findings inform the clinical work. Interns can get involved in research (especially program evaluation) in these treatment settings; decisions about whether the intern will be involved in research and, if so, the level of research involvement will be determined by the intern with the primary supervisor in the setting. Since our internship requires interns to attain numerous clinical competencies to complete the internship, interns who request a primarily clinical research rotation may participate in only one such rotation (such as in health services research) out of the four total 6-month rotations. In these latter cases, the Director of Training works with interns to determine a combination of rotations that will provide optimal opportunities for clinical immersion and clinical research consistent with the internship program’s overall goal of broad-based, generalist training.

The internship program also facilitates a **Research Career Mentoring Program** that offers participating interns exposure to key elements of research through linkage to an established VA Palo Alto principal investigator and/or alumni. Potential mentors include researchers at VA Palo Alto (HSR&D C&I, MIRECC, NCPTSD), at Stanford, USF, and UCSF. Participation in this program is optional and is most relevant for interns pursuing academic careers or positions that involve a substantial research component. This program is not a research rotation or a mini-rotation but, instead, focuses on research career development topics including, but limited to:

1. Assistance in the postdoctoral research fellowship application and decision-making process
2. Networking with researchers and other colleagues, both locally and nationally, in your area of research
3. Learning about current VA and non-VA funding priorities and initiatives in your area of research
4. Mechanics of applying for VA grants, VA early investigator grants, or NIH grants as a VA investigator
5. Challenges and benefits of doing research with clinical samples

The arrangement between the mentor and intern is meant to be informal and flexible and would be structured according to the needs and interests of the intern. Accordingly, in the past, the frequency of the mentor-intern meetings has ranged from once per month to four or more times per year. In other words, the goals of this program are individualized and developed primarily by the intern – interns set the agenda and

decide how to utilize mentors to help further interns' research career in a particular area. That said, the intern and research mentor may certainly collaborate on a formal research project if they wish. This is not required though and any such work would need to be conducted in addition to the intern's regularly scheduled internship rotations.

Internship Training Aims and Competencies

Embodied in our training philosophy and policy is experience distilled from over fifty years of working with successive classes of interns. We believe that interns should receive well-rounded clinical experience that includes work with mental health and medical populations, and we expect all interns to obtain training on internship with geriatric patients or in a medical setting in addition to working in mental-health settings. Further, psychologists should be able to assess and provide at least initial clinical care to patients across the spectrum of severity; interns who have not had intensive doctoral-level training experiences prior to internship with assessment and/or patients with serious mental illness will be expected to do rotations that provide such experience here. We believe that psychologists should be prepared to work as members of interprofessional health care teams, interacting collaboratively with the full range of disciplines that provide health care services. Most of our care settings are interprofessional, because of the nature of service provision in a complex health care system like ours; thus, interns will have at least one rotation during which they work with an interprofessional team. Within these requirements, assignment to rotations and selection of supervisors primarily is based on the intern's training needs and interests.

Development of professional responsibility and a professional identity as a psychologist are major themes of our training. We affirm collaborative decision-making between interns and training staff regarding each intern's development. Formal, written evaluation takes place every 3 months, though we view evaluation as a mutual and ongoing process among interns, supervisors, and the training program as a whole. We believe this is necessary to insure continued growth for each intern and for the training program. For a copy of our complete Training Manual, including evaluation processes, due process and grievance procedures, and record-keeping policies, please email the Director of Training at Jeanette.Hsu@va.gov.

"I have definitely been challenged this year but in a way that has made me a better clinician, professional, and student. I am looking forward to my next role as a postdoctoral fellow and definitely feel prepared after my training here. I will miss everyone here at VA Palo Alto!" ~Recent intern

General Training Aims and Competencies

To capture and expand the principles described above, we define the following core training aims and competencies. In addition to meeting the general professional competencies indicated below, by the completion of internship all interns should demonstrate basic competence in at least four of five training areas: *assessment, outpatient mental health, serious mental illness, behavioral medicine and/or geropsychology*. Some key competencies within each of those training areas are outlined following the general professional competencies below that we expect all interns to demonstrate.

Science-Practice Integration:

- Articulates a personal theoretical or conceptual perspective that is comprehensive and flexible, and demonstrates understanding of a scientist-practitioner approach within that perspective.
- Demonstrates a systematic, hypothesis-driven approach to case conceptualization and treatment and/or research questions.
- Reviews the literature to identify evidence-based practices (EBP) for patients' problems and flexibly applies this knowledge to case conceptualization and treatment and/or research questions.
- Incorporates data from the literature into (a) conceptualizations and interventions for complex cases, and/or (b) formulation of research questions in which evidence-based interventions do not fully address the problems.
- Ability to compare and contrast EBP approaches with other theoretical perspectives and interventions in the context of case conceptualization and treatment planning and/or research questions.

- Demonstrates independent, critical, scientific thinking in presentations (e.g., clinical case presentations, in-service presentations) or research projects.
- Effectively communicates scientific knowledge or research through presentations, professional papers, program implementation, or other avenues of dissemination.

Ethical and Legal Standards:

- Shows awareness of ethical issues that arise in professional activities and demonstrates behavior consistent with APA ethical guidelines.
- Shows ability to accurately identify, analyze and proactively address complex legal and ethical issues (e.g., seeks consultation when appropriate; shows awareness of potential conflicts; demonstrates willingness to confront peers/organization when necessary)
- Demonstrates knowledge and awareness of California and Federal laws with respect to the practice of psychology as applicable in the setting.
- Knows and, if necessary, acts according to specific procedures for reporting child, elder, and/or spousal abuse as well as for Tarasoff situations in clinical and research contexts.
- Acts in accordance with APA ethical guidelines and the laws, regulations and policies at the State and Federal level as well as that of VA, and conducts self in an ethical manner in all professional activities.

Individual and Cultural Diversity:

- Demonstrates understanding of the current theoretical and empirical knowledge base regarding cultural and other diversity issues and of how these impact all professional activities, including research, training, supervision/consultation, and service.
- Integrates individual and cultural diversity factors into the conduct of professional roles (e.g., research, service, other professional activities), including case conceptualization and treatment planning in the clinical setting.
- Implements effective clinical strategies with patients and/or research participants different from self in diverse ways in clinical and research settings.
- Independently able to articulate, understand, and monitor own cultural identity, history, attitudes, and biases in relation to work with others in clinical and research contexts.
- Able to critically evaluate feedback and initiate consultation or supervision when uncertain about diversity issues in clinical and research work.
- Demonstrates the ability to independently apply own knowledge and approach in working effectively with the range of diverse individuals and groups encountered during internship.

Professional Values, Attitudes, and Behaviors:

- Demonstrates professional responsibility and maintains professional presentation, including being on time for appointments and dressing appropriately to the clinical or research setting.
- Reliably manages clinical and/or research workloads and documents work in a timely way.
- Prepares for supervision and utilizes supervision time effectively.
- Demonstrates self-direction and initiative within intern's scope of competence.
- Shows emotional maturity in professional contexts by tolerating ambiguity/anxiety and considering the views of others, even in charged situations.
- Engages in self-reflection regarding own personal and professional functioning and accurately evaluates own level of competency and limitations when working with patients and other recipients of professional services; knows when level of expertise is exceeded; seeks appropriate consultation.
- Demonstrates openness to feedback and consultation from supervisors and other professionals and responds to such with constructive action or changes.

- Demonstrates knowledge of self and the impact of personal characteristics, biases, and behavior on their professional practice.
- Views supervision as professionally enriching rather than primarily evaluative and uses supervision to expand awareness of personal strengths and limitations.
- Appropriately manages boundaries in professional contexts.
- Demonstrates willingness to challenge self and others for the sake of improving services provided and/or research conducted.
- Engages in activities to maintain and improve well-being and professional effectiveness.
- Responds professionally in increasingly complex situations with a greater degree of independence while progressing across levels of training.
- Understands professional roles and demonstrates development of emerging professional identity as a “Psychologist.”

Communication and Interpersonal Skills:

- Develops and maintains effective and respectful relationships with a wide range of individuals, including patients, peers, research participants, supervisors, staff, and providers from other disciplines.
- Demonstrates effective interpersonal skills and the ability to manage conflictual relationships and/or challenging communication.
- Understands diverse views in complex and difficult interpersonal interactions.
- Oral communication is clear and professionally appropriate.
- Written communication is clear, well-integrated, and professionally appropriate.
- Nonverbal communication is professional and appropriate.
- Demonstrates a thorough grasp of professional language, communication, and concepts.

Assessment:

- Demonstrates knowledge of (including strengths/limitations), and ability to select, assessment approaches from the best empirical literature on measurement and psychometrics and appropriate to the identified goals and questions of the assessment and the diversity characteristics of the patient.
- Systematically conducts clinical/diagnostic interviews as a basis for case conceptualization and treatment planning.
- Interprets assessment results following current research and professional standards and guidelines to inform case conceptualization, diagnosis, and recommendations.
- Understands differential diagnosis using a system appropriate to the setting.
- Demonstrates knowledge of, and applies concepts of, normal and abnormal behavior, to case formulation.
- Writes clear and concise assessment reports/progress notes/manuscripts, integrating behavioral observations, historical data, medical records, interview, and/or test-based information as appropriate.
- Formulates well-conceptualized recommendations.
- Effectively communicates, in oral and/or written form, assessment results and recommendations to patients/family members and/or relevant providers.
- Conducts ongoing assessment and modifies diagnosis/case formulation as necessary when new information is available.

Intervention:

- Demonstrates appropriate empathy, is responsive, and elicits cooperation from patients and/or research participants.

- Attends to, and responds effectively, to patients' interpersonal and internal process (e.g. impact on others, avoidance of emotions).
- Attends to, and responds effectively to, patients' and/or research participants' thoughts, actions, and feelings.
- Understands problems and/or diagnostic categories within an evidence-based theoretical/conceptual framework that guides appropriate assessment and/or treatment strategies.
- Uses formulation of problems and goals to inform treatment plans/expectations for treatment.
- Implements interventions informed by the scientific literature, assessment findings, diversity characteristics, and contextual variables.
- Communicates effectively with patients, their families, and other care providers throughout the treatment process using verbal and written means.
- Evaluates intervention effectiveness and adapts intervention goals and methods consistent with ongoing evaluation.
- Demonstrates ability to conduct a lethality assessment and knows actions to take when confronted with a patient or research participant who is a danger to self or others.

Supervision:

- Understands basic supervision concepts and principles and the developmental process of clinical supervision.
- Applies knowledge of supervision models and practices in direct or simulated practice with psychology trainees or other health professionals (examples of direct or simulated practice include but are not limited to, role-played supervision with others and peer supervision with other trainees).
- Provides effective constructive feedback and guidance to peers or supervisees, or trainees of other disciplines (e.g., direct, behaviorally specific corrective guidance presented in terms of plans).
- Demonstrates awareness of boundary issues and the power differential in supervisory relationships.
- Understands strategies for managing resistance and other challenges in supervision.
- Demonstrates the ability to integrate awareness and knowledge of individual and cultural diversity in the provision of supervision.
- Demonstrates awareness of and adherence to ethics in the provision of supervision.

Consultation and Interprofessional Skills:

- Able to clarify and refine referral (or research) questions based on analysis/assessment of questions (or gaps in the literature) raised by a referring provider or colleague.
- Knowledge of and ability to select appropriate and contextually sensitive means of assessment/data collection that answers consultation referral question from providers or colleagues.
- Understands the structure of teams/research groups to which intern belongs or with which intern consults.
- Understands different team members' roles, including the psychology intern's role and function, and demonstrates respect for the roles and perspectives of other professions.
- Contributes to the team in each relevant training site, such as communicating important information about patients, being sensitive to and responding appropriately to the needs of other team members, and/or using skills as a psychologist to facilitate team/research group functioning.
- Provides constructive consultation to other psychology colleagues and/or effectively teaches colleagues and other trainees in areas of own expertise.
- Effectively communicates about psychological issues to non-psychology staff.
- Demonstrates ability to negotiate conflictual, difficult, and complex professional relationships.

- Recognizes opportunities for, and engages in, effective collaboration with other professionals toward shared goals.

Training Area Competencies

As stated above, interns are additionally expected to develop basic competence by the completion of internship in at least four of the following five training areas: *assessment, outpatient mental health, serious mental illness, behavioral medicine, and/or geropsychology*. Your rotations have been mutually determined with the Director of Training to meet these breadth requirements. Expectations in each of these areas are highlighted below, many of which overlap with general professional competencies outlined above. Thorough documentation of site-specific competencies (if any) for specific rotations will be provided as you begin rotations. Evaluations in each rotation are based on attainment of the general and site-specific competencies as well as adherence to professional standards of ethics and responsibility.

Assessment

- Administer, score and interpret neuropsychological and psychodiagnostic screening tests
- Know limits as an assessor and when to ask for consultation or make a referral
- Communicate assessment results verbally and in writing to professionals, patients, and families
- Know how to provide specific suggestions, based on assessment that will improve treatment planning and quality of care for the patient

Outpatient Mental Health

- Assess the risk a patient poses to self or others
- Evaluate a patient's need and appropriateness for different types (individual, group, or family) and durations (crisis management, brief, long term) of therapy
- Utilize psychoeducational interventions
- Determine when brief therapy can be used to accomplish patient goals and provide brief therapy when appropriate
- Provide longer-term therapy to complex patients using a conceptual rationale and defining goals that can be evaluated over time

Serious Mental Illness (inpatient or outpatient settings)

- Understand the course of acute and/or chronic disorder and its treatment
- Accurately diagnose acutely disordered patients
- Provide interventions, in conjunction with the interprofessional team, for violent, extremely agitated, and self-destructive patients
- Increase comfort in working with acutely disordered patients
- Provide treatment in an intensive treatment environment where the impact and consequence of the treatment process can be immediately observed and discussed

Medically-based Settings/Behavioral Medicine

- Understand the role of psychology in interprofessional medical settings and work collegially with other health professionals in such settings
- Utilize health psychology principles and strategies to provide psychoeducational and/or psychotherapeutic interventions for promoting health and wellness
- Provide intervention for stress reduction, pain management, adjustment to physical injury or disease, and rehabilitation
- Work with terminally ill patients and support the dying patient and family/loved ones

Geropsychology

- Understand the continuum of care for elderly patients and the appropriate utilization of programs and strategies at various points along that continuum
- Learn similarities and differences in the experience and expression of psychopathology in older, as compared to younger, adults
- Implement diagnostic and psychotherapeutic adaptations to make assessment and treatment more appropriate for older adults
- Understand the role of the family in providing care for frail or demented older adults, and provide interventions to improve the caregivers' skills and/or quality of life
- Collaborate with a variety of medical and allied health professionals in consultative and integrated care of older adults
- Work with terminally ill patients and support the dying patient and family/loved ones

"My internship year at Palo Alto VA helped to solidify my career goals. The top-notch training and supportive environment provided me the expertise and professional development tools to reach my early career goals. I am proud to say that I am a graduate of the program." ~Recent intern

Commitment to Diversity and to Developing Multicultural Competence

Our Psychology Training Program emphasizes the development of multicultural competence through both required and infused curricula, as well as a wide range of clinical experiences with diverse populations (see below for demographics of the VA Palo Alto patient population). Psychology Service and the Psychology Training Program are strongly committed to promoting a professional environment that is positive and supportive of individual and cultural differences and in which diversity is acknowledged and respected. We are fortunate to live in a very diverse geographical region that is commonly regarded as open and accepting of diverse ethnic and racial backgrounds, religious/spiritual practices, gender identities, and sexual orientations. We aim to reflect that level of respect and acceptance in the work environment. Specifically, Psychology Service and the Psychology Training Program actively seeks to maximize representation of different backgrounds on all committees or other professional subgroups, and to ensure that staff from different backgrounds are in visible leadership positions, participate in training-related activities, and involved in the hiring process. We believe that such visibility demonstrates to Psychology trainees, and to current and prospective staff, that the Service actively supports the professional development of staff and trainees from diverse backgrounds. Finally, Psychology Service expects staff to be dedicated to the ongoing process of maintaining multicultural competence across their professional activities. Psychology Service supports such continuing education by sponsoring and organizing several recent CE conferences and workshops on various diversity topics as well as on issues in multicultural supervision. In the 2019-2020 training year, our Psychology CE Committee sponsored CE events including a conference on “Healing Communities from Collective Trauma” and a discussion forum for VA mental health professional on “Social Justice Advocacy.”

Psychology Service has a strong history of retaining staff and supervisors for many years, including supervisors from diverse backgrounds, reflecting a positive working environment for all staff and trainees. Currently, 33% of Psychology internship supervisory staff self-identify themselves as being from ethnic minority backgrounds; 71% are cisgender female and 29% are cisgender male. In addition, 10% of supervisory staff are openly gay, lesbian, or bisexual. Of the interns training in the Psychology Internship Training Program in the last 10 years (N=144), 39% self-identify as coming from ethnic minority backgrounds and 12% self-identify as lesbian, gay, bisexual, and/or queer. The majority of recent interns have been cisgender female (76.4%), with a smaller number of individuals identifying as cisgender male (22.5%) and transgender male (1.1%).

The intern seminar devotes a significant section of the seminar series to directly addressing multicultural competence and diversity issues (including a day-long discussion-based and experiential workshop), as well as encouraging presenters for all topics to model critical thinking about diversity issues throughout the seminar series. Furthermore, supervisors address multicultural competence and diversity

“This [day-long seminar] is probably the best multicultural seminar I have attended. The topics were relevant and the exercises were engagingly self-reflective. I feel more aware of my own biases and privileges and hope this greater awareness will translate to better and more culturally sensitive care for Veterans.” ~Recent intern

issues in each rotation and during the course of supervision. The internship program also takes seriously the support of interns’ professional development with regard to ethnic and racial identities, sexual orientation, gender identity, disability, and other significant identifications and intersectionalities. Towards this goal, our diverse supervisory staff and pool of alumni are available for mentoring of interns from a wide range of identities and backgrounds.

Opportunities to Work with Diverse Populations

VA Palo Alto serves an ethnically diverse population of Veterans and active-duty personnel ranging in age from 19-90+, with more and more younger ages represented due to our nation's recent military conflicts. While most of the patients are cisgender male, VA Palo Alto has specific women's mental health programs drawing cisgender and transgender female Veterans and active-duty personnel from around the nation. Female patients now account for approximately 10% of the VA Palo Alto patient population. While accurate numbers of transgender Veterans are not available, VA Palo Alto has specific medical and mental health services for transgender male and female Veterans. Patients also range in socio-economic status, from high-income employees of local technology companies to low-income and/or homeless Veterans. The overall VA Palo Alto patient population reflects the distribution of self-reported ethnic/racial backgrounds in the pie chart below. There are many rotations which serve a larger proportion of patients from ethnic minority backgrounds, and several focusing specifically on women's mental health.

VA Palo Alto Demographics

Multicultural/Diversity Committee

Psychology Service operates a Multicultural/Diversity Committee (including staff, interns and postdoctoral fellows) which discusses, evaluates, and works to improve the efforts of the training program in recruitment and retention of diverse trainees and staff and the training and education of trainees and staff in multicultural competencies. The Psychology Training Program Multicultural/Diversity Committee is an active and diverse community that enacts initiatives to address the needs of the training program and staff, including workshops, conferences, clinical consultation, and social gatherings. In recent years, the committee has developed and implemented/co-implemented several workshops and conferences on multicultural competence in clinical supervision, competence in working with LGBT Veterans, understanding microaggressions in clinical practice and supervision, and multicultural competence for interdisciplinary teams. Recent projects include implementing a Diversity Mentoring Program for interns and postdoctoral fellows (see below), facilitating a discussion forum with VA mental health providers on experiences of gender, sexism, and sexual harassment, and developing and distributing practical guidelines for supervisors in addressing issues of individual and cultural diversity in supervision. Multicultural competence is valuable to us and something we consider essential to ongoing professional development.

The **Diversity Mentoring Program** offers interns and fellows the opportunity to discuss diversity-related issues with established VA Palo Alto staff psychologists and training alumni. Potential mentors include current psychology staff members and VA Palo Alto psychology alumni currently working in clinical or research staff positions at other institutions. Participation in this program is optional, private, and non-evaluative. The purpose of this program is to provide a safe, non-judgmental place for interns and fellows to discuss diversity-related issues including topics such as:

- adjusting to working with Veterans

- managing/responding to micro-aggressions
- discussing aspects of identity and intersectionality (e.g., race, ethnicity, gender, sexual orientation, etc.)
- managing work-life balance, including personal choices impacting career decisions
- professional development related to diversity concerns
- experiences of working in the VA, including environment, political climate, and other concerns

The arrangement between the mentor and intern is meant to be informal and flexible and structured according to the needs and interests of the intern. The mentor match is made at the start of training. Mentor-mentees are expected to meet (by phone or in person) at least once per month throughout the training year(s).

Trainee Self-Disclosure in Training and Supervision

In the APA Code of Ethics (2010), APA described what a program can reasonably expect of students in training regarding personal disclosure. Because this clause is particularly relevant for clinical training programs, such as our internship and postdoctoral programs, we have reproduced this ethics clause and discuss how we approach this issue in our training program:

7.04 Psychologists do not require students or supervisees to disclose personal information in course- or program-related activities, either orally or in writing, regarding sexual history, history of abuse and neglect, psychological treatment, and relationships with parents, peers, and spouses or significant others except if (1) the program or training facility has clearly identified this requirement in its admissions and program materials or (2) the information is necessary to evaluate or obtain assistance for students whose personal problems could reasonably be judged to be preventing them from performing their training- or professionally related activities in a competent manner or posing a threat to the students or others.

We fully endorse the spirit of the clause, believing that trainees should not be forced to reveal more personal information than they feel ready to process, until they feel some comfort with the supervisory situation, and feel safety regarding how shared information will be handled. At the same time, self-disclosure is an important part of the training experience and serves at least two important purposes. First, the supervisor is ultimately legally and ethically responsible for the welfare of any patient seen by the trainee; thus, any important information about the trainee's internal experience that may affect the conduct of assessment or therapy is expected to be a part of the supervision process. Second, the general competencies expected in our program, especially those described under the category of Professionalism, include some particularly relevant to this new ethics clause, e.g.:

- Shows emotional maturity in professional contexts by tolerating ambiguity and anxiety and considering the views of others, even in charged situations.
- Accurately evaluates level of competency and considers own limitations when working with patients; knows when own level of expertise is exceeded; seeks appropriate consultation when needed.
- Demonstrates knowledge of self and the impact of self on the conduct of therapy, within the theoretical perspective being utilized.
- Views supervision as professionally enriching rather than primarily evaluative and uses supervision to expand awareness and understanding of personal strengths and limitations

Feelings and the thoughts, beliefs, and circumstances that propel them cannot be simply expunged by a psychologist when it comes time to see a patient or to interact with colleagues. Learning to identify, utilize, and control feelings, attitudes, and actions in the consulting room and all other professional interactions is a lifelong process for all psychologists. We believe it is important that supervision be a place where the intern (or other trainee) is assisted to explore and understand the qualities and experiences that he or she brings to every aspect of professional work and how these facilitate or hinder effective interactions. We intend that interns and other trainees will recognize, improve, and employ those personal qualities that will assist in forming effective working relationships with patients, peers, other Psychology staff, staff and trainees of other professions with whom they work in the health care system, etc. – all professional work is influenced by the personal qualities of the trainee, and these are appropriately included in the supervisory process. At the same time, we re-affirm that this needs to be done in a sensitive way, in which the intern is given time to develop a safe and effective working relationship with the supervisor. This work should occur such that the underlying APA philosophy is respected. Interns should not be required or forced to divulge information that is not relevant to the work they are doing or in a way that is not designed to promote and enhance professional development.

Training Considerations During the COVID-19 Pandemic

In the San Francisco Bay Area, there has been some form of a shelter-in-place order since 3/17/2020 with an indefinite end date; health care workers (including VA Palo Alto interns and fellows) are considered “essential workers” and allowed to travel to work. You can see the VA Palo Alto COVID updates and details of our county shelter-in-place order at links below. Given the uncertain and dynamic nature of the COVID-19 pandemic, we do not know whether and how the 2021-2022 year will be impacted. The information below is provided to show you the current impact of the pandemic and how we have modified training to protect your health and safety as well as meet your training goals.

VA Palo Alto COVID-19 Current Operating Status:

<https://www.paloalto.va.gov/emergency/index.asp>. Since March 2020, we have been fortunate that we have had relatively low numbers of COVID-19 patients hospitalized in our facility. You can see current and total patient and employee cases at any VA facility at this website, including at Palo Alto: <https://www.accesstocare.va.gov/Healthcare/COVID19NationalSummary>. VA Palo Alto has implemented universal masking, meaning that anyone who enters our campuses is required to wear a mask, including patients who have outpatient appointments. All screening checkpoints are ensuring that patients and their caregivers have a mask, or are provided a mask if they do not have one. You will be asked health screening questions at the entrance checkpoints. VA Palo Alto is committed to providing all necessary PPE for its employees and trainees, as well as providing a hygienic work environment. You will also be provided masks for use at work; these are cloth masks for non-clinical use, and medical procedure masks for clinical settings where in-person patient contact is expected (one per day). You will also be issued a plastic face shield for your use, if needed in your training setting. Training settings will also provide cleaning supplies to sanitize your work areas. Finally, under shelter-in-place orders, you are required to have your PIV ID badge when traveling to and from work to verify your standing as an essential government healthcare worker.

Santa Clara County COVID-19 Website: <https://www.sccgov.org/sites/covid19/Pages/home.aspx>

Modifications to Training:

The orientation of interns and fellows will be a combination of virtual and in-person orientation and will include a discussion of COVID-19 including information about how health and safety are maintained at VA Palo Alto. All new interns and fellows will complete telehealth TMS trainings during their first week, and Psychology Service will prepare ad hoc telework agreements for each intern and fellow to allow the training program the most flexibility in arranging training during the year. Trainees will not be providing services to patients with known COVID; these patients are treated in separate, isolated medical units on the Palo Alto campus. Please note the following:

- The VA campuses have strict restrictions on patients or other members of the public visiting (only for urgent patient care or limited specialty care). All employees and visitors must wear a mask in all public areas on campus as part of our universal masking policy, and are expected to follow social distancing guidelines (6-foot distance from others).
- All outpatient clinics stopped seeing patients in person in March 2020, providing services only via telehealth (telephone or video when possible). Starting at the end of June 2020, outpatient clinics were permitted to increase to 20% in-person capacity for the near future; other increases have been placed on hold at this time (August 2020). For most outpatient settings at the onset of the 2020-21 training year, all or nearly all psychology trainee patient encounters will be by phone or video. As these restrictions change, we will continue to have collaborative discussions with trainees regarding these matters. As much as possible, sites will work to limit in-person patient contact and will take into account individual trainee circumstances and preferences in returning to in-person patient care.

- In residential or inpatient settings, nearly all patient contacts are done through telephone or video visits. The exceptions are in the Polytrauma System of Care and the Spinal Cord Injury Center where they are practicing extra vigilant hand hygiene and social distancing, are using a gown/mask/glove protocol when appropriate, and have a no visitor policy to the units. In addition, inpatient psychiatry units have recently been conducting group therapy with small numbers of patients in outdoor courtyards with appropriate social distancing. The SCI Center will require COVID testing for trainees in SCI rotations.
- Some inpatient medical units with very vulnerable patients (e.g., CLC/nursing homes, hospice unit) are operating with limited in-person staff and trainee contact with patients. At this time, psychology trainees will be allowed on the CLC units with restrictions, including required COVID testing, as well as use of telehealth (phone, video) with in-person staff support as needed to provide services to CLC patients.
- Some of the residential treatment units (e.g., PTSD and SUD residential programs) currently have very few residential patients. Current services in these programs have included intensive outpatient formats, via telehealth, as the programs consider and plan for limited new admissions.
- Our clinical research centers have been operating remotely since March 2020. Interns and fellows working in these settings will also work remotely.
- All students will continue to receive the required hours of weekly supervision (individual and group in-person or video is preferable, telephone only when needed). Psychology trainees should expect routine supervisory observation using in-person or telehealth modalities, as well as co-treatment with supervisors and other licensed mental health staff.
- All didactics and seminars are currently held remotely. Any future in-person seminars will be planned with appropriate social distancing.
- Currently, in-person team meetings or group supervision may occur with 6 or fewer people and only with appropriate social distancing; otherwise, video or telephone conferencing is being used.

The training program will develop an individualized plan for each intern and fellow which may range from full-time on-site work, part-time telework, or full-time telework with remote access from home which can include telehealth, didactics, individual and group supervision, team meetings, clinical documentation, and other projects in line with their training goals. Telehealth from VA or from home will occur with supervision and provision of clinical services as appropriate to clinical setting, supervision plan, and trainee's level of training. Telework plans will to be made collaboratively with supervisors with discussion of the pros/cons of different arrangements, the range of what is possible, and how other trainees and staff have made these decisions. Note that these arrangements will differ by training setting and trainee circumstances, and can change over time.

All psychology trainees are expected to communicate with their supervisors regularly regarding health and safety concerns and issues. Trainees with exposure to a person with COVID and/or experiencing potential COVID symptoms or should not report to work and follow CDC guidelines for self-quarantine or self-isolation. All trainees should inform Occupational Health if they are diagnosed or tested positive for COVID-19, or who are exposed to a person with COVID, to allow for contact tracing of all potentially exposed staff and patients at VA. If possible, we ask that the trainee gets promptly tested and does not return to work until a confirmed negative test, or what the current CDC guidelines recommend at that time. See below for the current (August 2020) guidance from the CDC:

<https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/quarantine.html#:~:text=You%20should%20stay%20home%20for,after%20exposure%20to%20the%20virus.>

<https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-in-home-patients.html>

See the website below for multiple free COVID-19 testing sites in Santa Clara County:
<https://www.sccgov.org/sites/covid19/Pages/covid19-testing.aspx>

Application Procedure and Selection Process

Our application and selection process has been designed to be in accord with the policies and procedures developed by the [Association of Psychology Postdoctoral and Internship Centers](#) (APPIC), including participation in the [Match](#). It is our intention to be in full compliance with both the letter and the spirit of the APPIC policy. This internship fully abides by the APPIC policy that no person at this training facility will solicit, accept, or use any ranking-related information from any intern applicant.

All applicants must register for the Match using the online registration system on the Match website at www.natmatch.com/psychint. Each year, the newly updated internship training program brochure is available in September on the VA Palo Alto Psychology Training website located at www.paloalto.va.gov/services/mental/PsychologyTraining.asp. If you apply for this internship, you are expected to submit all your application materials via the APPIC online application system. Go to the APPIC website at www.appic.org and click on the AAPI (APPIC Application for Psychology Internship) Internship Application Information link. Completed internship applications are due in November each year; this year the due date will be **Monday, November 2, 2020. All application materials must be submitted and received by us on or before 11:59pm (Eastern time) on this date.** Incomplete applications will not be read by the Selection Committee.

All application elements (#1-6) should be submitted using the AAPI Online system. Follow all instructions accompanying the AAPI Online to either enter your information directly, or upload your documents (#1-3). We encourage all CVs to be uploaded as Microsoft Word or Adobe Acrobat files. Only the transcript (#4) should be mailed in hard copy form to the AAPI Online application address.

Please note that, due to the high volume of emails sent during the application season, you will not receive a confirmation email from us that your application materials have been received. You can check on the AAPI Online system if your application is complete and if your DCT and letter writers have completed their parts (#5-6). We will notify you by email on or before December 15th of your interview status. We will not be informing applicants of interview status on a rolling basis; rather, we will send invitations to interview or notification of not being invited to the entire applicant pool at the same time in early December.

Application Requirements List

1. Cover letter, including VA Palo Alto training interests addendum (see below)
2. All elements of the AAPI Online general application
3. Curriculum Vita
4. Transcripts of graduate work. The transcripts should cover all post baccalaureate course work. You should mail one official copy of all graduate transcripts to the AAPI Online application address at:
*AAPI Online Transcript Department
P.O. Box 9117
Watertown, MA 02471*
5. Verification of AAPI by your doctoral program through the DCT Portal of the AAPI Online system.
6. Three letters of recommendation from faculty members or practicum supervisors who know your clinical as well as your research work well. Letter writers should upload an electronic copy to the Reference Portal of the AAPI Online system.

VA Palo Alto Training Interests Addendum

At the end of your cover letter, please **indicate to which of the 5 program training tracks you want to apply** (General, Behavioral Medicine, Geropsychology, Clinical Neuropsychology, Geriatric

Neuropsychology). Do NOT rank order these tracks in your cover letter. We strongly prefer that you indicate no more than two tracks. If you indicate three or more tracks, you must clearly describe in your cover letter how you envision our internship site meeting your training goals and interests for each track you select, with particular attention to how quite divergent tracks could fit your training interests and goals. Each of these VA Palo Alto training tracks is included the APPIC Match as a separate internship program site with its own Match number. If your interests change, please inform us.

In addition, at the end of your cover letter, please **provide a list of five rotation interests** from this Training Brochure. This in no way commits you or us to these rotations if you come to Palo Alto for internship. This listing helps us to know about your interests particularly for interview scheduling. If you are invited for interview, you will have individual interviews with the Director of Training and Selection Committee members from the track(s) you have indicated, and an informational meeting over lunch with current interns and/or postdoctoral fellows. Given that the Palo Alto internship requires interns to obtain breadth in training, you may want to consider indicating at least one rotation outside your track(s) that you are interested in. We will then use this list to identify two additional staff members who may be scheduled to meet with you for informational meetings about training rotations.

The interview day is a full one, with multiple individual interviews and meetings that we hope provide a sense of the wide range of training opportunities available during internship and the individual attention each intern receives on internship at Palo Alto. However, please note that the logistics and the unavoidable stresses of the interview day will not accurately reflect the experience of being on internship at Palo Alto, which past interns have consistently described as warm, supportive, and professionally and personally enriching.

Please use the format below by copying and pasting into your cover letter.

Program Training Track Interest(s): _____

Preferred Training Rotations:

- A. _____
- B. _____
- C. _____
- D. _____
- E. _____

Selection Criteria

At minimum, candidates for internship must have completed 3 years of graduate training by the start of internship, and have completed at least 300 intervention practicum hours and 50 assessment practicum hours and at least 800 total practicum hours at the time of application. Note that matched interns typically report more than these minimum number of hours. Beyond these minimum requirements, selection of interns is based on the following criteria (list not in priority order):

1. The breadth and quality of previous clinical or counseling training experience, with weight given to applicants who are at an advanced level.
2. Preference is given to candidates whose dissertation will be completed prior to internship, or at least well advanced. Applicants who have defended their dissertation proposal at the time of application will be given priority over applicants who have not yet done so.
3. The quality of scholarship and the scope of training, as indicated partially by academic record, research, papers presented at national and state conventions, and publications (especially those in peer-reviewed journals).
4. The relationship between the clinical interests/experience of the applicant and his/her research interests.
5. Involvement in professional organizations, particularly with regard to fit with applicant's professional goals.
6. Evidence of personal maturity and accomplishments which distinguish the applicant from peers.
7. Thoughtfulness of answers to the application questions.
8. The goodness of fit between the applicant's stated objectives and the training program and medical center's resources.
9. The strength of letters of recommendation from the Director of Training at the applicant's university, as well as from other faculty and professionals who know the applicant well.
10. Presentation in internship application and interview of personal and professional characteristics such as self-awareness, collegiality, professionalism, open-mindedness, clear communication, critical thinking, awareness of multicultural and diversity issues, and openness to feedback and new learning.

The internship program follows a policy of selecting the most qualified candidates and is an Equal Opportunity Employer. While a quota system of affirmative action is not used, priority is given to ensuring diversity in our internship classes. Our commitment to diversity includes attempting to ensure an appropriate representation of individuals along many dimensions, including (but not limited to) gender, sexual orientation, age, ethnic/racial minority backgrounds, persons with disabilities, and geographical and institutional diversity.

Selection Committee and Interview Process

The Intern Selection Committee consists of the Director of Training, Dr. Jeanette Hsu, and six other staff psychologists on a rotating basis representing different training tracks and emphasis areas. Currently, those staff members are Kimberly Hiroto, Ph.D., Robert Jenkins, Ph.D., Lisa Kinoshita, Ph.D., Priti Parekh, Ph.D., Carey Pawlowski, Ph.D., ABPP-RP, and Erin Sakai, Ph.D. Based on initial reading of internship applications by the Director of Training and Selection Committee members, some candidates will be invited to schedule an interview. Typically, these have been done as a face-to-face visit at VA Palo Alto or as a series of telephone interviews; however, due to the COVID-19 pandemic, **all interviews during the 2021 interview season will be conducted virtually via Zoom**. No in-person interviews will be offered to ensure all candidates have a level playing field. Interviews will include discussions with the Director of Training, Selection Committee members, and supervisors from the kinds of rotations the applicant is considering, and an informational meeting over (virtual) lunch with at least one current intern or postdoctoral fellow. Interviews are scheduled for a full day between mid-December and late January. Requests to meet with

specific staff will be considered but cannot be guaranteed. The interview day is a full one, with multiple individual interviews and meetings that we hope provide a sense of the wide range of training opportunities available during internship and the individual attention each intern receives on internship at Palo Alto. However, please note that the logistics and the unavoidable stress of the interview day does not accurately reflect the experience of being on internship at Palo Alto, which past interns have consistently described as warm, supportive, and professionally and personally enriching.

When the Selection Committee has determined that an interview offer will not be made to a candidate, he or she will be notified by email by December 15th. Typically, we receive over 200 applications each year from many highly qualified applicants, and must screen out over half of our applicants. We then inform these applicants by December 15th that they are no longer under consideration.

“The clinical training is very exceptional and I loved all of the supervisors I met with. It is clearly an incredible internship and the opportunities at this site are abundant. I just really enjoyed getting the opportunity to learn more about the site and meet with everyone.” ~Recent internship interviewee

Internship Admissions, Support, and Initial Placement Data Tables

Internship Program Admissions

Date Program Tables are updated: 9/1/2020

Briefly describe in narrative form important information to assist potential applicants in assessing their likely fit with your program. This description must be consistent with the program's policies on intern selection and practicum and academic preparation requirements:

The VA Palo Alto Health Care System provides training consistent with the scientist-practitioner model of psychology. The internship program at VA Palo Alto is a member of the Academy of Psychological Clinical Science, which is a coalition of doctoral training programs and internship sites that share a common goal of producing and applying scientific knowledge to the assessment, understanding, and amelioration of human problems. Our membership in the Academy indicates that the Internship Program at VA Palo Alto is committed to excellence in scientific training and to using clinical science as the foundation for designing, implementing, and evaluating assessment and intervention procedures. Our program fits best with interns who have been trained as scientist-practitioners or clinical scientists at the graduate level.

Does the program require that applicants have received a minimum number of hours of the following at time of application? If Yes, indicate how many:

Total Direct Contact Intervention Hours		Yes	Amount: 300 hours
Total Direct Contact Assessment Hours		Yes	Amount: 50 hours

Describe any other required minimum criteria used to screen applicants:

Applicants must have completed least 3 years of graduate training and 800 total practicum hours by the start of internship. Preference is given to advanced candidates from scientist-practitioner or clinical science graduate programs who have defended their dissertation proposal at the time of application, show evidence of research scholarship in areas that complement the clinical training offered at VA Palo Alto, and are involved in professional organizations that fit with their professional goals.

Financial and Other Benefit Support for Upcoming Training Year*

Annual Stipend/Salary for Full-time Interns	\$31,831	
Annual Stipend/Salary for Half-time Interns	N/A	
Program provides access to medical insurance for intern?	Yes	
If access to medical insurance is provided:		
Trainee contribution to cost required?	Yes	
Coverage of family member(s) available?	Yes	
Coverage of legally married partner available?	Yes	
Coverage of domestic partner available?		No
Hours of Annual Paid Personal Time Off (PTO and/or Vacation)	184	
Hours of Annual Paid Sick Leave	104	
In the event of medical conditions and/or family needs that require extended leave, does the program allow reasonable unpaid leave to interns/residents in excess of personal time off and sick leave?	Yes	
Other Benefits (please describe): Up to 10 days of professional leave may be granted for conference attendance, job or postdoc interviews, dissertation defense and graduation ceremony. Up to \$1000 can be approved for reimbursement of conference attendance registration and other educational course fees. Basic life insurance, free parking, and available public transit subsidy benefit. For more details on VA benefits, see https://www.psychologytraining.va.gov/benefits.asp .		

*Note: Programs are not required by the Commission on Accreditation to provide all benefits listed in this table.

Initial Post-Internship Positions

	2017-2020	
Total # of interns who were in the 3 cohorts	44	
Total # of interns who did not seek employment because they returned to their doctoral program/are completing doctoral degree	1 (maternity leave)

Note: “PD” = Post-doctoral residency position; “EP” = Employed Position. Each individual represented in this table was counted only one time. For former interns working in more than one setting, the setting selected represents their primary position.

Professional Outcomes for Former Interns

Where do VA Palo Alto Interns Go?

VA Palo Alto interns choose a wide range of professional positions and work settings. Consistent with the table above, approximately 95% of interns over the past 10 years have gone on to postdoctoral fellowships, with the overwhelming majority within medical centers (approx. VA=52%, academically-affiliated medical center/medical school=30%, other medical center=6%). About 40% of these are research-based fellowships, while 60% are more clinically-focused fellowships (although both types of fellowship typically have some combination of research and clinical responsibilities). Typically, more than 60% of interns choose one of the numerous postdoctoral positions available in the San Francisco Bay Area in the year following internship. Of those former interns not going on to postdoctoral fellowship programs, about 5% accepted job offers, the majority of which were research positions in a research center or institute, or in industry.

Following internship and/or a postdoctoral fellowship, interns from the 2010-2018 years are currently in the following types of jobs: 40% are in academic or primarily research positions, and 60% of interns are in positions emphasizing clinical work but typically includes some combination of clinical, administrative, teaching/supervision, and and/or research responsibilities. Of the former interns' employment settings, 61% are working in medical schools or medical centers (including in VA) in clinical and/or research areas, and 40% are in VA staff positions in clinical and/or research positions..

*Academic and primarily research positions are represented by the Psychology Department, Medical School, and Other/VA Research categories above. Other Clinical Positions include community mental health and university counseling centers. The Other category includes digital health and consultation work.

Psychology Postdoctoral Training

Psychology Service at VA Palo Alto has an APA-accredited general clinical postdoctoral fellowship program with nine funded 1-year postdoctoral training positions that are primarily clinically-focused, as well as two specialty APA-accredited 2-year postdoctoral fellowship programs in Clinical Neuropsychology and Rehabilitation Psychology. For more details of these full-time postdoctoral fellowship positions, please see the VA Palo Alto Psychology Training Program website at: <https://www.paloalto.va.gov/services/mental/PsychologyTraining.asp>. Final updates for the following training year will be posted by October 1st each year; however, while some information will change from year-to-year, please note that the majority of the training program information on this website remains the same and can inform you about the training opportunities available at Palo Alto even before the final updates are posted for the next postdoctoral training year.

In addition, the Mental Illness, Research, and Education Center ([Sierra Pacific MIRECC](#)), the [National Center for PTSD](#), and the Health Services Research and Development (HSR&D) Center for Innovation to Implementation ([Ci2i](#)) have funded 2-year postdoctoral positions that are focused on clinically-relevant research and prepare fellows for academic and clinical research careers. The [MIRECC Fellowship program](#) and the NCPTSD fellowship program are each separately accredited by APA, and the research-focused postdoctoral positions (HSR&D) are not part of an APA-accredited program.

Applicants for postdoctoral positions within VA must be U.S. citizens who have attended a doctoral program accredited by the American Psychological Association (APA) or Canadian Psychological Association (CPA) accredited graduate program in Clinical, Counseling, or Combined psychology, or Psychological Clinical Science Accreditation System (PCSAS) in Clinical Science. In order to be eligible to begin the Fellowship, the selected applicant must have completed the dissertation and all other doctoral degree requirements before September 1. The training program may rescind offers of postdoctoral positions for applicants selected for the postdoctoral fellowship, but who have not completed all doctoral degree

“What a full and exciting two years these have been! I cannot tell you how much I enjoyed my time at the VA and what wonderful training I received. I feel that I have grown so much, both personally and professionally. I will miss the VA, all of the extraordinary people, and the lovely California weather!”
~Recent intern/postdoctoral fellow

requirements by September 1. Information about required application materials and the selection process can be obtained by visiting the VA Palo Alto Psychology Training [website](#) located at or by contacting the Postdoctoral Coordinator, William Faustman, Ph.D., preferably by email at William.Faustman@va.gov or at (650) 493-5000 x64950. Application materials need to be submitted by the deadline of December 29, 2020. Please specify which focus or specialty area(s) you are considering when you make inquiries about the fellowship program and when you submit your application materials.

In addition to clinical and research postdoctoral positions at VA Palo Alto, the greater Bay Area offers a plethora of postdoctoral training positions that Palo Alto interns have been offered and/or accepted, including at San Francisco VA, VA Northern California, UCSF, Kaiser Medical Centers, and Stanford University. Postdoctoral positions at Stanford include those within the Department of Psychiatry and Behavioral Sciences (both clinical and T32-funded research positions), the Stanford Prevention Research Center (SPRC), and the Stanford Clinical Excellence Research Center (CERC). While the majority of interns have stayed in the Bay Area for postdoctoral training, Palo Alto interns have been successful in national searches as well, with recent interns (2016-2020) training at San Diego VA and UC San Diego, Boston VA, Denver VA, Phoenix VA, Milwaukee VA, Memphis VA, Brown University, Weill Cornell Medical College, Memorial Sloan Kettering Cancer Center, VA Ann Arbor/University of Michigan Consortium, Medical College of South Carolina, Durham VA, and Yale School of Medicine.

Living in the San Francisco Bay Area

The San Francisco Bay Area is a geographically and ethnically diverse area surrounding the San Francisco Bay in Northern California. Home to world-class universities such as Stanford University, UC San Francisco, and UC Berkeley as well as the headquarters of leading Silicon Valley high-tech companies such as Google, Yahoo!, Apple, LinkedIn, Hewlett-Packard, Intel, Facebook, Twitter, Uber, Netflix, eBay, Nest, and YouTube, the Bay Area is one of the most culturally, intellectually, and economically dynamic areas of the country. Palo Alto is located on the San Francisco Peninsula about 35 miles south of San Francisco, which is referred to as “The City” and is the cultural center of the Bay Area.

The Bay Area has three major airports (San Francisco International, San Jose Mineta International, and Oakland), as well as an extensive freeway system. Public transportation on BART (Bay Area Rapid Transit) and local bus systems connect the cities and suburbs of the Bay Area, though most residents drive themselves. Housing for renters and homebuyers is one of the most expensive in the country.

The Bay Area is the fifth most populous metropolitan area in the United States, with high levels of international immigration. Palo Alto is part of Santa Clara County which has slightly different demographics than the Bay Area and the state overall, with greater numbers of Asians and Asian Americans and fewer numbers of African Americans. Also, thirty-eight percent of the people living in Santa Clara County were born outside the U.S. There are 55,763 Veterans living in Santa Clara County. See pie charts below for specifics on state and county demographics from U.S. Census data (retrieved August 18, 2020), from <https://www.census.gov/quickfacts/fact/table/santaclaracountycalifornia/PST045216> and <https://www.census.gov/quickfacts/fact/table/CA/PST045216>.

The region has a lot to offer, making the Bay Area one of the most desirable places to live in the country – mild weather, beaches, mountains, and open space perfect for outdoors enthusiasts, a thriving business

and technology sector, and excellent universities and academically-affiliated medical centers providing resources for intellectual and scholarly activities. Visitors and residents alike can enjoy the diversity of social and cultural attractions, such as museums, cultural events, top-rated restaurants, and wineries in the Napa and Sonoma Valleys. In addition to easily accessible outdoor recreation areas for skiing, surfing, hiking, and biking, sports fans can follow the many Bay Area professional sports teams (SF Giants, SF 49ers, Oakland A's, Golden State Warriors, San Jose Sharks) and college teams (Stanford, UC Berkeley).

Most interns live within a 30-40 minute drive to Palo Alto, with the majority of interns living in towns on the west side of the San Francisco Bay (e.g., San Mateo, Redwood City, Menlo Park, Palo Alto, Mountain View, Sunnyvale, Santa Clara). Some interns choose to live in San Francisco to take advantage of the urban lifestyle available in the city. Intern classes have typically been enthusiastic about planning regular (often weekly) get-togethers as well as periodic day trips and holiday parties.

Given the great weather, abundance of natural beauty, strong academic and business environment, cultural diversity, and lots of high-paying jobs, many people want to live in the Bay Area but can find it challenging to afford living here. The cost of living is much higher than most of the rest of the country, with some estimates of between 60-90% higher than anywhere excluding other expensive urban areas such as New York, Boston, Washington DC, Los Angeles, or Seattle. While many essentials such as groceries, clothing, gas, and utilities can be only slightly to somewhat higher, the biggest difference is the cost of housing (renting and buying). In considering moving to the Bay Area, you can explore a useful resource to compare the cost of living at: <http://www.bankrate.com/calculators/savings/moving-cost-of-living-calculator.aspx>. Interns living in the Bay Area have used the following strategies to cope with the high cost of living: careful budgeting, living with others to reduce the cost of housing (e.g., sharing housing with friend, partner, family member, or housemate), or utilizing savings, and (to lesser extents) accessing family financial resources or taking out additional loans.

Outpatient Mental Health Treatment Programs

Primary Clinical Rotations:

Addiction Consultation & Treatment (ACT) (Building 520, PAD)

Supervisor: Kimberly L. Brodsky, Ph.D.

Melissa Mendoza, Psy.D.

Melissa O'Donnell, Psy.D.

Daniel Ryu, Psy.D.

Joshua Zeier, Ph.D.

Patient population: Veterans struggling with substance use, substance related and addictive illnesses, comorbid trauma and stressor-related illnesses, mood and anxiety spectrum illnesses, severe mental illness, etc. Veterans are demographically diverse, with a significant portion homeless and OIF/OEF.

Psychology's role: Dr. Brodsky serves as the Program Director for the inter-professional team leading the Addiction and Consultation Treatment (ACT) service and as the current Acting Director of Addiction Treatment Services. Dr. Mendoza is a staff psychologist in our ACT clinic who specializes in dual diagnosis, trauma based interventions and Dialectical Behavioral Therapy. Dr. Zeier is a staff psychologist in our ACT clinic who specializes in motivational interviewing and enhancement, syndromes of disinhibition, group psychotherapeutic interventions and has a particular interest in common factors in psychotherapy and how these facilitate effective clinical interventions. Dr. O'Donnell is also a staff psychologist in our ACT clinic, specializing in evidence-based treatment for addiction and trauma-related disorders, with a special interest in the role of shame and stigma. Dr. Ryu is a staff psychologist in our ACT clinic who has a special interest in multicultural dialogue, systems- and community-focused interventions, traumatic stress in the context of oppression, and the role of social justice advocacy in mental healthcare. In these roles, psychology provides liaison and training within the hospital, our medicine service, our residential treatment programs and our inpatient psychiatric service. Dr. Brodsky and Dr. Zeier also serve as affiliated faculty with Stanford Medical School, working together with Dr. Mendoza, Dr. O'Donnell, and Dr. Ryu to provide training to our psychiatry residents in addiction medicine and treatment. Psychologists within the ACT team provide consultation and supervision to our LCSWs regarding evidence based treatments and complicated cases. The psychologist liaises with our ACT, Foundations of Recovery (FOR) and First Step psychiatrists in working with Veterans to provide Opioid Replacement Therapy (ORT) through our Pharmacotherapy of Addictions Resident Clinic (PARC), psychoeducation for families and Veterans, motivational interviewing to enhance engagement and treatment planning to meet Veterans' goals.

Psychologists within ACT also provide group therapy and serve as individual therapists for our Intensive Outpatient Program (IOP), which serves Veterans from a harm reduction standpoint, as an outpatient, step-down and step-up service with our residential treatment programs. Psychologists lead ATS case conferences discussing complicated cases and enhancing team collaboration to facilitate case conceptualization and derive individualized treatment plans for Veterans. In addition, psychologists collaborate in various multicultural dialogue spaces, including monthly multicultural consultation, veteran led IOP community diversity committee, and staff multicultural mornings. Psychologists are involved in consult triage for the hospital, for our Community Based Outpatient Clinics (CBOCs), with our Veterans Justice Outreach and HUD-VASH teams. Psychologists also assess for and implement emergent and planned hospitalization surrounding suicidality, homicidality, grave disability and medically supervised withdrawal. Psychologists work with the team to provide ambulatory, medicine and psychiatric detoxification, respond to and triage consults within and outside the hospital VISN and coordinate inter-facility services. Psychologists also provide telehealth services, including groups, individual sessions and evaluations.

Other professionals and trainees:

- Psychologists
- Addiction Therapists

- Psychiatrists
- Licensed Clinical Social Workers
- Nursing Staff
- Recreation Therapists
- Veteran Peer Specialists
- Marriage and Family Therapist
- Chaplaincy
- Post-doctoral Fellows
- Psychiatric Residents (2nd year)
- Medical students

Nature of clinical services delivered: Clinicians provide group and individual psychotherapy as part of our Intensive Outpatient Program, comprehensive evaluations and case management for individuals entering residential treatment, consultation, liaison and motivational interventions for Veterans receiving treatment within our hospital systems, through Veterans Justice Outreach and within other VA hospital systems. Interventions and theoretical orientation are focused on evidence based scientifically driven modalities. Current groups are focused on ACT, DBT techniques for emotional regulation, mindfulness, and distress tolerance, Motivation Enhancement Therapy, CBT techniques, Seeking Safety, Relapse Prevention and Harm Reduction, pain management, military sexual trauma, and groups to manage PTSD and the sequelae of traumatic experience.

Intern's role: Interns are full members of the inter-professional treatment teams. Interns participate actively, serving as individual and group therapists and co-therapists. Interns work with patients and their families and contribute to the medical record, documenting assessments and interventions. Interns are expected to integrate science and practice, being aware of current literature supporting their work. Interns assist in the training and education of professionals from other disciplines and within psychology. Interns provide evidence based trainings, consultation and liaison under the supervision of and in collaboration with the ACT psychology team.

Amount/type of supervision: Interns receive 1 hour of individual supervision each week and are often frequently engaged in ad hoc supervisory discussions, co-therapy and shadowing. Interns receive 2 or more hours of group supervision, including a supervision focused specifically on group facilitation. Interns also participate in a weekly DBT consultation group, consistent with full model DBT services provided within our Intensive Outpatient clinic. Interns work collaboratively with the ACT team in providing evaluation and treatment of all Veterans and function as co-therapists, with the psychologist, for the daily psychotherapy groups as part of our Intensive Outpatient Program.

Didactics: Interns are encouraged to participate in and present at the Mental Health Continuing Education Series, occurring at noon on Tuesdays, the FOR Continuing Education Series, occurring at 3PM on Mondays, and the Thursday didactic series for psychiatry residents through Stanford Medical School.

Pace: ACT is an extremely busy service providing addiction and dual diagnosis treatment, consultation, liaison and evaluations across VAPA and at times to other VISNs (e.g. SFVA, NorCal VA). Addiction treatment is inherently challenging and fast paced requiring responsiveness to emergent situations. Workload is heavy and requires development of skills necessary to organize time efficiently, manage liaison and consultation with professionals of various training backgrounds by role modeling evidence based interventions and flexibly responding to individuals with a broad range of presenting issues.

Use of Digital Mental Health tools: Consistent with ACT's integration of evidence-based treatments for addiction and co-occurring disorders, we integrate mental health mobile apps and online programs that compliment individualized treatment plans. These include applications developed by the National Center for PTSD and Stanford researchers (e.g., PE Coach, CPT Coach, Virtual Hope Box, Mindfulness Coach, Vet Change, and Motivational Enhancement assessment tools). Interns use telehealth and video connect to provide evaluations, individual and group therapy to remote clinics and Veterans' homes.

“One of the things that is most effective [about Dr. Brodsky’s supervision is her ability to create]...space for trainees’ competency while also providing scaffolding for learning and exploration.” ~Recent intern

Addiction related issues affect a massive proportion of our Veterans across all ages and demographics. While rotating through ACT interns have the opportunity to hone their general clinical skills while developing expertise in the treatment of substance use disorders and frequently co-occurring illnesses and enhancing motivation towards change through effective collaboration with a client to meet their goals. ACT is also an ideal rotation for professional development through liaison,

management of systems related issues, consultation with professionals from various backgrounds and cultivation of opportunities to provide evidenced based training and perspectives. The successful trainee will learn to function skillfully in team facilitation, enhance the skills of other professionals through mutual learning, participate in program development and respond to outcome driven data, respond functionally to emergent situations and creatively navigate systemic roadblocks while providing evidence based treatment, evaluations and assessments.

Mental Health Clinic, Menlo Park (Outpatient MHC, Building 321, MPD)

Supervisors: Jessica Cuellar, Ph.D.
Bruce Linenberg, Ph.D.
Erin Sakai, Ph.D.
Eliza Weitbrecht, Ph.D.

Patient Population: Predominantly male Veterans with a wide variety of psychiatric diagnoses, psychosocial issues, and co-morbid substance use, personality, and medical problems. Veterans’ ages range from 20s to 90s, tending to cluster around Vietnam-era and OIF/OEF/OND eras. Female Veterans are also seen in the clinic, though some choose to be seen in the Women’s Counseling Center.

Psychology’s Role: Psychologists often serve as Mental Health Treatment Coordinators, who conduct initial new-to-clinic assessments, create treatment plans, provide individual therapy, facilitate psychotherapy or psychoeducation groups, give consultation to other team members or services, and respond to immediate psychiatric issues which may entail voluntary or involuntary hospital admissions. Psychologists are integral members of our interdisciplinary treatment teams, consisting also of - psychiatrists, social workers, and nurses. We collaborate as well with specialists in Vocational Rehab, Art therapy, and Recreation therapy. Each team meets weekly to coordinate interdisciplinary care.

Other Professionals and Trainees: In addition to staff noted above, trainees may include: Psychology Postdoctoral Fellows, Psychology Practicum Students, Psychiatry Residents, Social Work interns, or other staff.

Nature of Clinical Services Delivered:

- Individual, group psychotherapy, and psychoeducational classes that may include a variety of therapeutic modalities including cognitive-behavioral, psychodynamic interpersonal, humanistic, and existential models. Supervision is available in ‘classic’ CBT, CBT-I, Acceptance & Commitment Therapy, Cognitive Processing Therapy, Problem-Solving Therapy, Motivational Interviewing, Interpersonal Therapy, Time-Limited Psychodynamic Therapy, and other evidence-based approaches.
- Mental health treatment coordination
- Intake evaluations and treatment planning

- Medication evaluation and follow-up
- Liaison/consultation with other programs and staff.
- Assessing and managing emergencies and hospital admissions as necessary

Intern's Role: Interns have the opportunity to function and contribute much as the Psychologist does, simply under supervision, and with variations depending upon experience and learning needs. Thus, Interns will have the opportunity to treat Veterans with a wide variety of diagnoses and disorders from mild to severe; provide individual psychotherapy; lead or co-lead psychotherapy or psychoeducational groups; conduct initial assessments; create treatment plans; liaise with other services, including Inpatient Psychiatry, Domiciliary Service, Compensated Work Therapy (CWT) program, Addiction Treatment Services, etc. Provision of services may be delivered in-person or, potentially, via videoconferencing.

Amount/Type of Supervision: Interns receive at least one hour of individual and one hour of group case consultation/supervision each week. Supervision can also include co-leading a therapy group or psychoeducation class with the supervisor, video/audiotaping sessions for later review in supervision, and observation during team meetings. Individual supervision addresses intake assessments and the intern's clinical caseload of individual and group therapy clients, including case conceptualization, treatment planning, and familiarization with new therapies. Supervision also covers diversity, professional development, treatment team functioning, and program development and systems issues. Group supervision includes readings on a variety of topics and issues, watching video of therapists from differing theoretical orientations, and opportunities for case consultation. It is meant to foster discussion about treatment, theory, issues around professional identity, systems problems, ethical concerns, etc.

The MHC Psychologists' theoretical orientations include cognitive-behavioral, psychodynamic, interpersonal psychodynamic, systems, psychosocial recovery, and integrative perspectives. Interns often receive informal supervision as needed.

Didactics: The weekly hour-long group supervision meeting includes readings on a variety of topics and issues, and watching video of therapists from differing theoretical orientations, and clinical case presentations. It is an open format, meant to foster discussion about treatment, theory, issues around professional identity/development, systems problems, ethical concerns, etc. There is also a joint didactic/consultation group with Psychiatry residents once a month, which can include discussions of Psychiatry/Psychology roles, case conceptualization, discussions of treatment approaches, current topics in mental health, etc.

Pace: Moderate and steady. The intern must be able to organize and prioritize time required to fulfill role requirements.

Use of Digital Mental Health tools: Mental Health apps are used as a supplement to therapy (as appropriate). During COVID-19, telehealth formats (e.g., telephone and audio-visual formats) have been the primary mode of service delivery. As such, trainees have the opportunity to become familiar with the practical and conceptual skills needed to deliver interventions via telehealth modalities.

Additional Information: Trainees have paired this rotation with mini-rotations or partnerships with Family Therapy, Acceptance and Commitment Therapy. There are also ample opportunities to receive supervision in CPT, ACT, couples therapy, TLDP, etc., even if a formal mini-rotation is not requested (depending on supervisor expertise).

Specialty Training Opportunity: Geriatric Outpatient Mental Health

Interns can also opt for a training experience within the MHC that focuses on older Veterans (65+). This training experience will utilize a biopsychosocial approach to case conceptualization given the complexity and diversity of geriatric presentation. Interns will also consider the appropriateness of assessments and interventions for older adults, making adaptations or adjustments when needed. Prior experience with geriatric populations is not required. For more information about this training experience, see the Geriatric Outpatient Mental Health rotation in the Geropsychology section.

Reviewed by: Erin Sakai, Ph.D

Posttraumatic Stress Disorder Clinical Team (Building 321, MPD)

Supervisor: Madhur Kulkarni, Ph.D.

Patient population: Men and women struggling with PTSD, many of whom have additional comorbid diagnoses. Traumatic experiences may include events from combat, training incidents, military sexual trauma, childhood, and civilian experiences.

Psychology's role in the setting: To provide individual and group psychotherapy, using evidence-based treatments for PTSD.

Other professionals and trainees in the setting: Psychology postdoctoral fellows, psychology practicum students, psychiatry residents, social workers, art therapists, nurses, and psychiatrists. The PCT team consists of psychologists, social worker, and an Art therapist/recreation therapist. Trainees include medical residents and social work interns. Psychologists also work closely with the Mental Health Clinic staff, coordinating care with mental health treatment coordinators, nursing staff, and psychiatrists.

Nature of clinical services delivered: The PCT places an emphasis on empirically-supported treatments for PTSD, but integrates treatment interventions from a variety of modalities. There are opportunities to provide individual psychotherapy (e.g., Prolonged Exposure Therapy, Cognitive Processing Therapy, Skill-Building/CBT, Acceptance and Commitment Therapy, Skills Training in Affective and Interpersonal Regulation, Motivational Interviewing) and group psychotherapy (e.g., PTSD Education, Seeking Safety, Anger Management). Interns will work in coordination with MHC and Substance Abuse Program staff.

Intern's role in the setting: Interns will have the opportunity to provide both individual and group psychotherapies. Depending on level of interest and skill, as well as clinic schedule, interns can choose to co-lead a PTSD-relevant group of interest to them. Interns are also involved in the triage, assessment, and treatment planning of PCT patients. Participation in team meetings and didactic trainings is also part of this rotation.

Amount/type of supervision: At least one hour of individual supervision will be provided and interns will participate in one hour of group supervision with other psychology trainees. Interns will also attend PCT team meetings. Supervision will include review of session recordings, role play, and presentation of case conceptualization.

Pace: The PCT clinic has a steady workload with a significant amount of direct clinical care. Because of the nature trauma-focused therapy, the work can be emotionally intense. Expectations around number of assessments, individual clients, and groups per week will be set collaboratively at the start of the rotation. Interns will be expected to write individual, group, and assessment notes in a timely and professional manner. Given the emotional intensity of some of the psychotherapies provided (e.g., prolonged exposure) there is also a strong emphasis on self-care.

Use of Digital Mental Health tools: PCT staff, including trainees, integrate the use of mobile applications in their work with Veterans to maximize treatment benefit, as well as deliver therapy via telehealth to outlying CBOCs and to home via clinical video telehealth (CVT).

This rotation is a great fit for anyone who is interested in gaining initial or additional expertise in the outpatient treatment of PTSD and its associated features. The PTSD Clinical Team (PCT) rotation aims to build foundational knowledge of PTSD, as well as an understanding of the triaging, assessment, case conceptualization, and multidisciplinary treatment of Veterans with PTSD. Skills are fostered through opportunities to conduct thorough PTSD assessments; to conduct individual psychotherapy; to co-lead

psychotherapy groups/classes; to participate in team meetings and didactic presentations; to take part in individual and group supervision; and to function as an integral part of a multidisciplinary team. Additionally, you will be exposed to numerous evidence-based treatments, including Prolonged Exposure, Cognitive Processing Therapy, Seeking Safety, CBT for PTSD, Motivational Interviewing, and Acceptance and Commitment Therapy. There are also opportunities for program development, as the PCT is continuing to assess and adjust our approach to treating Veterans with PTSD, based on new research findings, feedback from Veterans, and increasing experience with OIF/OEF Veterans.

PTSD Intensive Outpatient Program (Building 352, MPD)

Supervisors: Jaclyn Kraemer, Ph.D.

Dorene Loew, Ph.D.

Hong Nguyen, Ph.D.

Lizzie Sauber, Ph.D.

See description in the Specialty Mental Health Treatment Programs section.

Women's Counseling Center (Building 350, MPD)

Supervisor: TBD

Patient population: The Women's Counseling Center (WCC) is an outpatient mental health program for women-identified Veterans at the Menlo Park Division of VAPAHCS. Women Veterans are the fastest growing patient population within the VA. They have unique mental health needs, but have traditionally been underserved. This multidisciplinary program provides a range of services with the goal of increasing access to care and enhancing the mental health services provided to women Veterans at this facility. Women Veterans seen at WCC are demographically and diagnostically diverse. Many are likely to have significant trauma histories that have not been adequately addressed, or that may have been exacerbated as a result of their minority status in the military. As a result, the treatment of PTSD is a major focus (see below).

Psychology's role in the setting: Psychologists function as part of an interdisciplinary team (BHIP team) to provide treatment planning, intake evaluations and psychometric assessments, and individual and group psychotherapy. Trainees will work as part of a team whose goal is provide gender-sensitive care, including coordinated care with other health care programs to enable every woman to best address her specific needs.

Other professionals and trainees in the setting: This is an interdisciplinary setting with professionals from medicine, psychiatry, nursing, social work, recreational therapy and chaplaincy. This setting also includes psychology fellows, psychology practicum students, and social work interns.

Nature of clinical services delivered: Services include mental health promotion (e.g., transition assistance from military to civilian life, stress management, violence prevention), and evidenced-based treatment for conditions unique or prevalent among women Veterans including depression, anxiety, and PTSD in a building dedicated to women's mental health care. Treatments offered consist of Cognitive-Behavioral Therapy, Skills Training in Affect and Interpersonal Regulation, Acceptance and Commitment Therapy, and Dialectical Behavior Therapy as well as specialized treatment for PTSD and related issues (e.g., Cognitive Processing Therapy, Prolonged Exposure Therapy, Anger Management, and Seeking Safety). Psychometric assessment, which can include structured clinical interviews for PTSD (i.e., CAPS) are often administered to patients new to treatment. Treatment modalities include individual and group

therapy, as well as telemental health services for women who have difficulty accessing care (e.g., rural populations, caregiving responsibilities).

Intern's role in the setting: Interns function as part of an interdisciplinary team to provide clinical services. Interns will be responsible for managing their own client schedule, determining appropriate treatment strategies (with the assistance of the supervisor), and actively consulting with other providers within the VA system. Clinical research opportunities are also available in the areas of stress and trauma. These opportunities are ideal for interns interested in formulating research questions based on their clinical experiences in this rotation (i.e., application of the scientist-practitioner model), or mapping onto an existing project as part of their training. This rotation is also available as a mini-rotation as agreed upon by the intern and supervisor.

Amount/type of supervision: Supervision includes individual, face-to-face supervision on a weekly basis, live observation and group supervision. Additional meetings with the supervisor are scheduled as-needed.

Didactics: Participation in a weekly didactic series with a focus on women-specific mental health issues and the national Women's Mental Health Webinar offered monthly are offered to interns to complement their applied learning experiences.

Pace: This is a busy outpatient mental health clinic with opportunity to participate in a wide range of clinical services. Interns will work with the supervisor on an individualized training plan at the start of their rotation that will help guide the pace of their work. In general, interns are expected to conduct one psychodiagnostic interview per week, co-lead one group, and carry a small caseload of individual therapy patients. Therapy notes are expected within 24 hours of providing services.

Use of Digital Mental Health tools: The Women's Counseling Center staff regularly, including trainees, integrate the use of mobile applications in their work with women Veterans to maximize treatment benefit, as well as deliver therapy via telehealth to outlying CBOCs and to home via CVT.

The Women's Counseling Center rotation is an ideal opportunity for trainees interested in the provision of mental health services to the rapidly increasing number of women Veterans now being served by the VA. Interns will have the opportunity to:

- Participate in a new and important center for women Veterans
- Conduct mental health assessments and interventions sensitive to women's issues
- Learn and implement evidenced-based therapies such as CPT, PE, DBT, CBT, STAIR, and ACT
- Participate in evaluation/outcome research

"Training at WCC has been such a positive, and informative, experience. The clinic is a rich training environment for working with women Veterans with complex mental health needs; there is a true sense of community at every level. The psychologists at WCC are collaborative, warm, and approachable with even the smallest question or concern. The clinic operates as well-functioning team that models respect and empathy for clients, trainees, and staff, alike. I learned so much about effectively using trauma-focused therapy, DBT, and other interventions, that I will carry well beyond this year."

Mini-Rotations:**Acceptance and Commitment Therapy (Mini-Rotation)**

Supervisors: Robyn D. Walser, Ph.D.
Veronica Reis, Ph.D.

Acceptance and Commitment Therapy (ACT) is an empirically-supported intervention, and an EBP for depression, chronic pain, and other disorders. It is a behaviorally-based intervention designed to address avoidance of internal experiences such as negative thoughts, emotions and sensations while also focusing on making powerful life enhancing choices that are consistent with personal values. ACT demonstrates the role that language plays in human suffering and specifically undermines this role with experiential exercises, mindfulness practice, use of metaphor and focus on defining values. ACT is principle-based and focused on process implementation. As well, it has a number of manuals that can be applied with a number of populations. The mini-rotation is typically offered to interns in a number of different settings as supported by individual rotation supervisors (e.g., BMed, Inpatient Psychiatry, Women's Health Center, MHC, PTSD Clinics/residential programs). The mini-rotation is open to trainees new to ACT but is better suited to trainees who already have some familiarity with ACT theory and concepts.

Amount/type of supervision: At least 1.5 hours per week of group supervision/consultation with individual supervision as needed. Dr. Walser co-leads the mini-rotation via videoconference 2x/month as does Dr. Reis. It is standard for at least one of the supervisors to be present each week. Opportunities to be observed and recorded are available.

Didactics in the setting: Formal didactics providing an introduction/overview of ACT is limited. Participation in the ACT mini-rotation includes reading and reviewing articles, chapters, and books specific to ACT and the underlying theory. As well, trainees will be asked to view web material to support their training.

Mini immersion: During the 2nd half of the training year, participation in a 2-day Introduction to ACT workshop that is more experiential in nature is recommended to assist with learning ACT concepts and clinical implementation.

Small Project: Each supervisee will be asked to create an educational product related to ACT. This can include client exercises, therapist exercises, and/or review of literature (determined by supervisor and supervisee depending on interests).

Use of Digital Mental Health tools: Support for use of VA mobile apps, as appropriate.

Dialectical Behavior Therapy (Mini-Rotation)

Available at the Addiction Consultation and Treatment program

Supervisors: Kimberly L. Brodsky, Ph.D.; Melissa Mendoza, Psy.D.; Joshua Zeier, Ph.D.;
Melissa O'Donnell, Psy, D.; Daniel Ryu, Psy.D.

Dialectical Behavior Therapy (DBT) is a comprehensive and multimodal psychosocial treatment for individuals with complex, severe, and chronic behavioral problems and emotion dysregulation. DBT has garnered significant empirical support in terms of its effectiveness in reducing suicidal thoughts and acts, decreasing the frequency and duration of inpatient hospitalizations and residential treatment, increasing treatment retention, reducing substance use, and promoting improved coping and functioning for individuals who commonly present with suicidal behaviors and/or addictive behaviors. DBT is consistent with recovery-oriented initiatives, in that it provides a frame for active and collaborative treatment

relationships and shared decision making. DBT is a behaviorally-based intervention designed to enhance client capabilities, improve motivation, promote skills acquisition and generalization, support treating therapists, and structure the environment to support recovery. The DBT mini-rotation will provide a combination of didactic and supervised clinical experience in the use of DBT with dually diagnosed individuals participating in the Addictions Consultation and Treatment clinic and across trainees' rotation settings. ACT clinical staff have been intensively trained in DBT and the ACT Intensive Outpatient Program has all four modules of skills training DBT groups. As a part of this mini-rotation, trainees will have participate once monthly in a multicultural consultation space in which an ecological model is applied to understanding veterans in the context of intersecting systems of oppression. Trainees will have the opportunity to participate in a comprehensive DBT team providing individual therapy, group skills training, and phone coaching in addition to participating in a weekly DBT consultation team, once monthly multicultural consultation, and receiving DBT informed supervision. Additionally, other target populations can be included depending on interest and availability and as supported by individual rotations (e.g. opportunities to work with clients in PE/DBT, etc).

Amount/type of supervision: A minimum of 1.5 hours per week of group supervision in DBT consultation, trainees can also receive individual DBT informed supervision and participate in a group supervision focused on group modalities. Opportunities to be observed and recorded or to co-lead DBT skills groups are available.

Didactics in the setting: Participation in the DBT mini-rotation includes reading and reviewing articles, chapters and books specific to DBT and the underlying theory.

Mini immersion: During the training year, participation in a day long Introduction to DBT workshop to assist with learning DBT concepts.

Use of Digital Mental Health tools: None.

Small Project: Each supervisee will be asked to create an educational product related to DBT. This can include dissemination, evaluation, client interventions, therapist trainings, review of literature (determined by supervisor and supervisee depending on interests), etc.

Family Therapy Training Program (Mini-Rotation)

Supervisor: Elisabeth McKenna, Ph.D., Co-Director

Jessica Cuellar, Ph.D., Co-Director

Eliza Weitbrecht, Ph.D.

The Family Therapy Training Program at the VA Palo Alto Health Care System has an international reputation as a center that has been devoted to the treatment of couples and families, the training of mental health professionals, and the study of family processes. Family-systems theory represents the broad stance from which both clinical data and therapeutic change are considered, and the program's educational curriculum is focused on developing a full range of clinical skills including couples and family assessment, interviewing, intervention, and family-systems consultation.

Our training comfortably represents differing systemic theoretical orientations that include structural, psychoeducational, integrative behavioral, and emotionally focused approaches to couples and family treatment. Training in the Family Therapy Training Program concentrates first on fundamental systemic assessment and treatment skills that most family therapists draw upon, and exposure to specific evidence-based clinical approaches is provided. Throughout their rotations, psychology interns are asked to

continually define their evolving, personal models of psychotherapeutic process and change. In addition to careful case conceptualization, treatment planning and responsible execution, we encourage curiosity, individuality, and inventiveness.

Patient Population: Couples and families are directly referred to the Family Therapy Training Program's clinic for consultation and treatment from medical and psychiatric programs within the VA Palo Alto Health Care System and from the community. During their mini-rotation, each intern can expect to treat one couple or family with live supervision, and observe at least two other cases. Interns will see a range of cases, varying across presenting problem, couple and family composition, and family developmental stage.

Nature of clinical services delivered: Consistent with the VA's commitment to treating couples and families, the Family Therapy Training Program offers a continuum of services that include, but are not limited to: brief family consultations, couples and family therapy, and family psychoeducation.

Intern's role: Psychology interns are typically assigned to the Family Therapy Training Program for six months as a mini-rotation that can be combined with other half-time rotations offered by the psychology internship program. Interns who are assigned during the second rotation (February-August) are expected to continue working through mid-August.

Amount and type of supervision: The format for supervision is group consultation. Interns have the opportunity to observe each other and work together as a clinical team. From a teaching point of view, careful attention is paid to case formulation, the identification and resolution of clinical impasses, and development of the therapist's use of self in therapy. The clinic has two studios equipped with one-way mirrors and phone hook-up for live supervision.

Didactics: Didactics are woven into the training during the Friday morning clinic (8:00-12:00pm). In addition, the interns are provided with readings in couples and family therapy that provide a solid conceptual, practical, and intensive introduction to couples and family therapy.

Pace: The usual caseload for psychology interns and postdoctoral fellows is one couple or family.

Use of Digital Mental Health tools: None.

Summary. Specialized family therapy skills are highly valued in VA and academic medical centers, academic departments, and community-based mental health clinics throughout the country. Although we are supportive of trainees' efforts to continue their training in family therapy and family research, interns participating in the program need not plan to spend the majority of their professional time specializing in this area. However, at the completion of the rotation, we do expect that trainees will leave the program with greater proficiency in engaging couples and families, family assessment and consultation, formulating and executing systemic interventions, evaluating treatment progress, and planning termination. In addition, we hope to stimulate interns' creativity, intelligence, and resourcefulness in their ongoing development as clinical psychologists.

For additional information about the Family Therapy Training Program, please contact Elisabeth McKenna, Ph.D. at (650) 493-5000, extension 69389 (Palo Alto) or Jessica Cuellar, Ph.D. at (650) 493-5000, extension 22691 (Menlo Park), or Eliza Weitbrecht, Ph.D. at (650) 493-5000, ext. 23027 (Menlo Park).

Inpatient Psychiatry Treatment Units

Introduction and Overview

Psychiatric Intensive Care Unit (520C)
Intensive Treatment Unit (520D)
Intensive Treatment Unit (520B)

Supervisors: **Stephen T. Black, Ph.D.**
William O. Faustman, Ph.D.
Claire Hebenstreit, Ph.D.
TBD

Patient population: Male and female Veterans with serious mental illness in acute crisis

Psychology's role: All psychologists on the inpatient units serve as attending care providers, integral members of the interprofessional treatment teams, and provide group therapies, individual therapy, assessment, and supervision and training of psychiatry residents and medical students in psychological interventions.

Other professionals and trainees: Psychiatrists, Psychiatric Residents (1st and 2nd year, may not be present on all units), Medical Consultants, Pharmacist, Social Worker, Recreation Therapist, Nursing Staff (RNs, LVNs, and NAs), Chaplain, Nursing students, Chaplain students (may not be present on all units), Medical students (may not be present on all units), and Psychology practicum students (may not be present on all units).

Nature of clinical services delivered: The units provide comprehensive inpatient assessment and treatment for psychiatric illnesses that place a person or the community at risk. Concomitant medical problems are also addressed. The approach to treatment on all units is biopsychosocial. Each patient meets daily with the treatment team to evaluate progress, address problems, and to review the treatment plan. Careful attention is paid to medications, psychosocial factors, interpersonal behavior on the unit, medical problems, and practical circumstances.

Intern's role: Interns are full members of the interprofessional treatment teams and participate actively to the extent they are clinically ready. Interns work with patients and their families and contribute to the medical record, documenting assessments and interventions. Interns are expected to integrate science and practice, being aware of current literature supporting their work. Interns assist in the training and education of professionals from other disciplines. Interns provide group and individual interventions for Veterans

Amount/type of supervision: Interns receive 1 hour of individual supervision each week (more as needed). Interns receive 2 or more hours of group supervision weekly and participate in a weekly supervision on group psychotherapy. Interns work collaboratively with the treatment teams in providing assessment and treatment of all patients and function as co-therapists, with the psychologist, for the daily psychotherapy groups. Theoretical orientation varies with the individual supervisor, but a cognitive-behavioral, social-learning theory perspective is predominant.

Didactics: Interns are encouraged to participate in the weekly inpatient psychiatry didactic series.

Pace: Acute inpatient programs are very busy units, operating at nearly full capacity at most times. Inpatient work is inherently fast paced, with patients being admitted in acute crisis. Workload is heavy and requires development of skills necessary to organize time efficiently. Caseloads have frequent turnover, requiring the interprofessional teams to work quickly and intensively with their patients.

Use of Digital Mental Health tools: None. Videoconferencing platforms (VVC) is utilized for treatment rounds and team meetings.

The Acute Inpatient Psychiatric Programs, as is true in most areas of health care, have undergone significant programmatic change in recent years. These changes result from a philosophical shift in treatment focus within the Veterans Health Administration, from one of extended hospital-based,

inpatient care, to one of community-based outpatient care. Within the VA, this has meant the closure of many inpatient units and a transfer of those resources to enhanced outpatient care designed to prevent the need for hospitalization. The VA Palo Alto has been one of the national leaders in this movement and the inpatient units now deliver acute, short-term treatment to the patient with a serious mental health crisis.

At the Palo Alto Division, we have two 20-bed programs housed in a brand new, purpose build inpatient psychiatry building. This new building offers state-of-the-art facilities for acute psychiatric care, including large atriums, exercise rooms, and significant access for patients to have both privacy and support in a recovery oriented environment. .

Training Opportunities

Training in working with individuals with severe psychopathology is particularly important for those psychologists whose academic programs have not exposed them to the diagnosis, management, and treatment of acute psychiatric crisis in its many manifestations.

A number of training opportunities stem from the nature of inpatient units as total environments. An intern on an inpatient rotation will interact with patients with a wide range of psychopathologies, neuropathologies, and medical disorders. The intern has the opportunity to integrate psychological treatments with biological, medical, social, educational, and nursing interventions. The intern has an opportunity to observe the supervisor intervene with patients and staff and to discuss the rationale for interventions, as well as their success or failure. The intern also has the opportunity to develop multifaceted skills as psychologist, therapist, consultant, and leader.

*“Having ample opportunities to lead groups has helped increase my comfort with uncertainty and improved my ability to improvise clinically.”
~Recent intern*

Psychology interns are integral members of the treatment teams on all units. As team members, they participate in community meetings, group psychotherapy, daily progress reviews with individual patients, as well as daily rounds during which the team reviews every patient’s progress. While an intern is accepted as a full member of the treatment team, the program also prides itself on providing a supportive training environment for the intern. Levels of responsibility are geared to the intern’s readiness, with ample support

from staff and with increasing responsibility and independence as skills develop.

An intern may be involved in a variety of activities such as individual, group, and family therapy, assessment, case management, or consultation. Interns typically carry several individual cases for which they provide case management, assessment, and individual psychotherapy. A strong emphasis is placed on diagnostic assessment, documentation of psychopathology, and development and provision of treatment that addresses the psychopathology and psychosocial issues. Therapy groups are diverse and span the range of level of functioning of the patients. Interns frequently serve as co-leaders of these groups.

The inpatient setting provides an experience in which the impact of treatment is readily observed. A lack of response or deterioration in a patient’s condition is cause for re-evaluation of the diagnosis and treatment plan. Events are assessed for their impact on the ward as well as for their meaning for the individual patient.

Goals of training for intern rotations in inpatient psychiatry include:

1. Develop skills in performing comprehensive psychiatric evaluations, with emphasis on psychosocial issues and case formulation, as well as developing proficiency with DSM-5.
2. Develop familiarity with various types of major psychopathology.
3. Perform neuropsychological screening.
4. Develop crisis assessment and intervention skills, as with suicide risk.
5. Develop group therapy skills with groups having rapid turnover and shifting group dynamics.
6. Develop skill in brief psychotherapy with pragmatic outcomes.

7. Learn case management skills requiring an understanding of all aspects of treatment, including the biologic. Elicit patient cooperation and participation in treatment and discharge planning. Make timely decisions regarding treatment. Prepare comprehensive discharge summaries.
8. Gain familiarity with other VAPAHCS programs, so as to be able to make appropriate referrals and to coordinate treatment with other units.
9. Gain knowledge of legal procedures in which the psychologist is engaged (e.g., placing patients on holds, filing for conservatorships, and testifying in court).
10. Develop comfort working collaboratively with an interdisciplinary team, including developing theoretical and behavioral understanding of factors that facilitate and hinder effective teamwork.
11. Develop skills in providing informational and supportive family therapy.
12. Develop general knowledge of ethical and legal issues surrounding work with suicidal or assaultive patients and develop comfort in making decisions about involuntary commitments.
13. Develop basic familiarity with psychopharmacology.

“One of my biggest accomplishments [on the inpatient rotation] has been to design evidence-based interventions for groups and individual sessions, which has increased my confidence and skills.” ~Recent intern

Psychiatric Intensive Care Unit (520C, PAD)

Supervisors: Stephen T. Black, Ph.D.
William Faustman, Ph.D.

Patient population: Adult male Veterans with diagnoses of severe mental illness.

Psychology's role: The psychologist is an attending mental health care provider who supervises the evaluation and treatment of a Veteran while inpatient, as well as coordinating the transition to outpatient care. The Psychologist coordinates and supervises both individual and group psychotherapy components of treatment, neuropsychological screenings, behavioral interventions, forensic evaluations and court testimony.

Other professionals and trainees: Psychiatry, Social Work, Nursing, Pharmacy, Medical students.

Nature of clinical services delivered: Acute inpatient stabilization of Veterans with serious mental illness. Interventions include psychopharmacology, individual and group psychotherapy, behavioral interventions, and neuropsychological screening assessments.

Intern's role: The intern attends daily interdisciplinary team treatment rounds, opportunity to lead/co-lead groups, follows three to four individual psychotherapy cases, and conducts neuropsychological evaluations as needed. The Intern participates in forensic evaluations of patients and can go to court with attendings to observe expert witness testimony. The Intern may pursue research if interested.

Amount/type of supervision: Daily consultation and at least one hour weekly of face-to-face supervision to discuss all aspects of the training experience.

Didactics: One lunch meeting per week with psychiatry residents, medical students, psychology interns, and practicum students. Patient interviews and state of the art lectures are provided on a wide range of inpatient psychology/psychiatry topics.

Pace: Very fast pace; daily progress notes required with same day turnaround time.

Use of Digital Mental Health tools: None. Videoconferencing platforms (VVC) is utilized for treatment rounds and team meetings.

520D is a 20-bed acute care treatment program for male psychiatric patients. This is the unit on which the most severe psychiatric symptoms are managed. Treating Veterans of all ages who are in psychological crisis, the unit offers individual and group psychotherapy as well as psychopharmacologic and behavioral interventions. With up to 50% of patients on involuntary commitment at any one time, there is an opportunity to deal with a variety of psycho-legal issues. The Psychiatric Intensive Care Unit is affiliated with Stanford University School of Medicine and is a training site for psychiatric residents and medical students as well as for psychology interns and practicum students.

An added benefit of this rotation is working on a highly effective interdisciplinary team. You will learn about mandatory reporting laws, involuntary commitment issues, forensic evaluation, and expert witness testimony.

This unit is very supportive of research activities, with recent projects on the prediction of violence in psychiatric populations and on the efficacy of new anti-mania medications. This unit would be supportive of interns who wish to carry out research projects during this rotation in the spirit of the scientist-practitioner model.

Intensive Treatment Unit (520D, PAD) (Closed, scheduled to reopen Spring 2021)
Supervisor: To Be Determined

Patient population: Male Veterans with serious mental illness, addiction issues, and PTSD in acute crisis.

Psychology's role: The psychologist serves as an attending care provider and are integral members of the interprofessional treatment teams. Psychology provides group therapies, individual therapy, and assessment.

Other professionals and trainees: Psychiatrists (two), Psychiatric Residents (1st and 2nd year), Medical Consultants, Pharmacist, Social Worker, Recreation Therapist, Nursing Staff (RNs, LVNs, and NAs), Medical students, Psychology practicum students, and Nursing students.

Nature of clinical services delivered: Comprehensive inpatient assessment and treatment for psychiatric illnesses that place a person or the community at risk. Concomitant medical problems are also addressed. The approach to treatment on all units is biopsychosocial. Each patient meets daily with the treatment team to evaluate progress, address problems, and to review the treatment plan. Careful attention is paid to medications, psychosocial factors, interpersonal behavior on the unit, medical problems, and practical circumstances.

Intern's role: Interns are full members of the interprofessional treatment teams and participate actively to the extent they are clinically ready. Interns work with patients and their families and contribute to the medical record, documenting assessments and interventions. Interns are expected to integrate science and practice, being aware of current literature supporting their work. Interns assist in the training and education of professionals from other disciplines. Interns provide group and individual interventions for Veterans

Amount/type of supervision: Interns receive 1 hour of individual supervision each week (more as needed). Interns receive 2 or more hours of group supervision and participate in a weekly supervision on group psychotherapy. The typical day includes several hours of meeting with patients with attending psychologists and psychiatrists present. Interns work collaboratively with the treatment teams in providing assessment and treatment of all patients and function as co-therapists, with the psychologist, for psychotherapy groups. Interventions and theoretical orientation is focused on brief, evidence based interventions. Current groups are focused on ACT, DBT techniques for emotional regulation, mindfulness, and distress tolerance, Motivational Interviewing, sleep and relaxation, CBT techniques, Seeking Safety, Relapse Prevention and Harm Reduction, and groups to manage PTSD and the sequelae of traumatic experience.

Didactics: Interns are encouraged to participate in the inpatient psychiatry didactic series occurring once a week. Supervisor provides didactic material and instruction as needed or indicated based on the intern's clinical interests or needs of the patient population.

Pace: Acute inpatient programs are very busy, operating at nearly full capacity. Inpatient work is inherently fast paced, with patients admitted in acute crisis. Workload is heavy and requires development of skills necessary to organize time efficiently. Caseloads have frequent turnover, requiring the interprofessional teams to work quickly and intensively with their patients.

Use of Digital Mental Health tools: None.

520C is an acute treatment unit for male Veterans, with a capacity for 20 patients; the number of Veterans varies by need. Treating Veterans of all ages who are in psychological crisis, the unit offers individual and group therapy as well as psychopharmacologic and behavioral intervention. The majority of patients are voluntary and there is a unit emphasis on addiction and PTSD. The Intensive Treatment Unit is affiliated with the Stanford University School of Medicine and is a training site for psychiatric residents and medical students as well as for psychology interns. The overall level of acuity and severity of symptoms is generally less than on the other locked units.

Intensive Treatment Unit – Female and Geriatric Veterans emphasis (520B, PAD)

Supervisor: Claire Hebenstreit, Ph.D.

TBD

Patient population: Veterans with serious mental illness, with an emphasis on female Veterans and geriatric Veterans. Presenting disorders range from bipolar disorder and schizophrenia, to severe depression, to PTSD, to drug and alcohol addiction.

Psychology's role: The psychologist serves as an attending care provider and is an integral member of the interprofessional treatment teams. Psychology provides group therapies, individual therapy, and assessment facilitate family meetings when indicated, and collaborate with regards to discharge/disposition and coordination of ongoing treatment.

Other professionals and trainees: Psychiatrist, Pharmacist, Social Worker, Recreation Therapist, Nursing Staff (RNs, LVNs, and NAs), Medical students, Psychology practicum students, Nursing students, and Geropsychiatry Fellows.

Nature of clinical services delivered: Comprehensive inpatient assessment and treatment for psychiatric illnesses that place a person or the community at risk. Brief cognitive assessment as needed. Concomitant medical problems are also addressed. The approach to treatment on all units is biopsychosocial. Family meetings and/or meetings with outpatient treatment providers facilitated as indicated. Each patient meets daily with the treatment team to evaluate progress, address problems, and to review the treatment and discharge plan. Careful attention is paid to medications, psychosocial factors, interpersonal behavior on the unit, medical problems, and practical circumstances.

Intern's role: Interns are full members of the interprofessional treatment teams and participate actively to the extent they are clinically ready. Interns work with patients and their families and contribute to the medical record, documenting assessments and interventions. Interns are expected to integrate science and practice, being aware of current literature supporting their work. Interns assist in the training and education of professionals from other disciplines. Interns provide group and individual interventions for Veterans. Interns may help with the facilitation of community meetings. Interns may have opportunities to conduct brief neuropsychological assessment if desired.

Amount/type of supervision: Interns receive 1 hour of individual supervision each week (more as needed). Interns receive 2 or more hours of group supervision and participate in a weekly supervision on group psychotherapy. The typical day includes several hours of meeting with patients with attending psychologists and psychiatrists present. Interns work collaboratively with the treatment teams in providing assessment and treatment of all patients and function as co-therapists, with the psychologist, for the daily psychotherapy groups. Interventions and theoretical orientation is focused on brief, evidence based interventions. Current groups are focused on ACT, DBT techniques for emotional regulation, mindfulness, and distress tolerance, Motivational Interviewing, sleep and relaxation, CBT techniques, Seeking Safety, Relapse Prevention and Harm Reduction and groups to manage PTSD and the sequelae of traumatic experience.

Didactics: Interns are encouraged to participate in the inpatient psychiatry seminar series (noon on Tuesdays).

Pace: Acute inpatient programs are very busy, operating at nearly full capacity. Inpatient work is inherently fast paced, with patients admitted in acute crisis. Workload is heavy and requires development of skills necessary to organize time efficiently. Caseloads have frequent turnover, requiring the interprofessional teams to work quickly and intensively with their patients.

Use of Digital Mental Health tools: None. Videoconferencing platforms (VVC) is utilized for treatment rounds and team meetings.

520B is an acute treatment unit for male and female Veterans, with a capacity for 20 patients; the number of Veterans varies by need. Treating Veterans of all ages who are in psychological crisis, the unit offers individual and group therapy as well as psychopharmacologic and behavioral intervention. This is the only inpatient psychiatric unit that treats female Veterans; interest in and sensitivity to the unique issues

and cultural factors experienced by women in general (and women in the military in particular) is critical. Further, this unit has an emphasis on geriatrics that would make this rotation a good fit for those with an interest in co-occurring mental health and age-related cognitive issues. Opportunities for some assessment are available based on the interests of the intern.

Specialty Mental Health Treatment Programs

Domiciliary Service (Building 347, Menlo Park Division)

- A. First Step Program – A 90-day residential substance abuse treatment program**
- B. Homeless Veterans Rehabilitation Program – 180-day residential National Program of Clinical Excellence**

First Step Residential Rehabilitation Program, Domiciliary Service (347-A, MPD)

Supervisors: Timothy Ramsey, Ph.D.
Leighna Harrison, Ph.D.

Residents: The population includes men and women with substance use disorders (SUDs) ranging from Veterans in their mid-twenties to late 60's. Most of the residents are middle-aged men, usually with chronic and severe SUDs, often complicated by histories of social and occupational impairment along with concurrent moderate, though stable, psychiatric and/or medical disorders.

Services: Milieu treatment including community meetings, case management, psychoeducational skills-building classes (e.g., relapse prevention, 12-Step facilitation, emotion regulation/coping, relationship/communication, cognitive-behavioral skills, Acceptance and Commitment Therapy, sexual health), recreational and leisure activities, and a weekly aftercare outpatient group. All Veterans receive individual psychotherapy from program staff or trainees. Veterans also receive wrap-around service of case management, psychiatry, and medical care. Program attends regular outings or hosts BBQs for invited family members as part of learning to socialize without substances.

Staff and trainees: Two Psychologists, one psychiatrist, two social workers, one recreation therapist, a chaplain, two addiction therapists, five health technicians, nurse, nurse practitioner, four LVNs, and a Medical Support Assistant. Trainees have included psychology, recreation therapy, and social work interns, psychology practicum students, chaplain and nursing students. There are between 2 and 4 trainees at a time in this setting including Practicum Students, Interns, and Postdoctoral Fellows.

Psychology's role: Psychologists manage the program, and, along with the other staff, design the community groups and interventions based on empirically supported methods), assess and provide therapy for patients, participate in individualized treatment planning, co-lead psychoeducational groups/classes, and provide consultation and training for staff.

Intern's role: The intern functions as a regular clinical staff member:

- Interns maintain a caseload of 4-5 individual clients for individual psychotherapy to address issues that arise in the treatment setting and provide treatment for the commonly associated mental health issues in this population (PTSD, MDD, Bipolar Disorder, Psychotic Disorders, Cognitive Impairments, and Personality Disorders).
- Interns serve as mental health consultants to the para-professional substance abuse treatment staff. Interns meet with the Veterans on their case load and create a mental health treatment plan to address the Veteran's goals and needs.
- Trainees co-lead community meetings and psychoeducational groups/classes (e.g., relapse prevention (CBT based), 12-Step facilitation (MAAEZ), emotion regulation/coping (STAIR), relationship/communication, and general cognitive-behavioral skills). Document clinical activities including treatment plans, suicide safety plans, individual therapy and group/class progress notes, provider admission/intakes, and discharge summaries.
- Additional optional activities depend on interests of the intern (e.g., completing assessments, designing psychoeducational interventions, conducting clinical research with existing dataset, facilitating or co-facilitating specialty groups to address specific clinical issues often associated with substance dependence.

Supervision: One hour of weekly individual supervision, one hour of group supervision, and one hour of optional group supervision/ consultation for Cognitive Processing Therapy and/or CBT for Substance Use Disorders; daily staff meetings, co-facilitation of groups, reviewing notes, and frequent informal contacts.

Didactics: Principles of therapeutic community and groups (interactional and psycho educational), and, in March, a 16-hour class on SUD is provided for all interns.

Pace: Typical intern workday:

- Attend and eventually lead staff meetings (twice daily)
- Co-lead community meeting (weekly)
- Co-lead psychoeducational group (once or twice weekly)
- Provide individual psychotherapy to small caseload (5-6 hours per week).
- Write electronic notes (treatment plans, progress notes, provider admission/intakes, and discharge summaries, comprehensive suicide risk evaluation, and suicide safety plans) .

"I appreciate Dr. Ramsey's care and attention to supervision. He was very warm while also challenging me to demonstrate my skills, explain my rationale, and take risks." ~Recent intern

Use of Digital Mental Health tools: Opportunity to assist Veterans with VA-approved apps for substance use, PTSD, and memory assistance. First Step recently created an App for emotion management and self-soothing. We utilize V-tel for psychiatry coverage and encourage trainees to sit in on initial assessments. During COVID 19, we also expanded our treatment to include more than 20 weekly telehealth outpatient groups, and telehealth sessions for individual psychotherapy, case management, and nursing assistance. We have been able to work more extensively with Veterans who are continuing some form of substance use and practice MI and harm reduction strategies which are not practical in a residential setting.

Substance use disorders (SUDS) are the most prevalent of all psychiatric disorders. Most First Step residents use multiple substances, with alcohol, nicotine, cannabis, methamphetamine, cocaine, and heroin being the most common. Nearly all of our patients are dually diagnosed and benefit from individual psychotherapy in addition to the general classes, groups and therapeutic community. Therapeutic interventions are drawn from CBT, DBT, psychodynamic, solution focused, and interpersonal models.

First Step is a 90-day Residential Rehabilitation, therapeutic community that provides ongoing assessment, recovery planning, psychoeducation, and support within a social setting that values personal responsibility, problem-solving, practice, personal relationships, and play. An ongoing weekly aftercare

"I think the biggest strength about doing a rotation with the First Step program is the exposure that you can get to so many different treatment modalities, including individual psychotherapy, group therapy (process groups and skills-based groups), community meetings and milieu treatment, and consultation work with other professionals." ~Recent intern

group is also offered. For orientation, First Step trainees observe experienced staff in various programs (e.g., outpatient clinic, 30-day inpatient, 6- month residential therapeutic community, intensive outpatient, day treatment program for dual-disordered patients).

By the end of the rotation an intern can expect to be familiar with the full continuum of empirically-supported treatment and rehabilitation services for patients with SUDs of varying severities and co-morbidities, become skilled in assessments, counseling, and facilitating large groups, understand the operation of a therapeutic milieu, and develop effective methods of managing personal reactions that may arise when working with complex and challenging patients.

Reviewed by: Timothy Ramsey, Ph.D.

Date: 9/1/20

Homeless Veterans Rehabilitation Program, Domiciliary Service (347-B, MPD)
Supervisor: Amy Wytiaz, Ph.D.

Patient population: Male and female Veterans who have been homeless for periods ranging from less than one month to over 10 years. Nearly 100% have active, chronic Substance Use Disorders, and the majority carry at least one other psychological condition (i.e., 60% mood disorder, 75% PTSD or other anxiety disorders, 3% Schizophrenia or psychotic spectrum disorder and 8-10% Personality Disorders). Rates of PTSD have dramatically increased among our population, such that HVRP has implemented EBTs for PTSD, including individual and group therapies. We are also experiencing a rise in a range of mild to moderate Cognitive Disorders, such that cognitive screens and use of compensatory strategies and adapted interventions are common. HVRP is a setting in which trainees may expect to see a variety of comorbid psychological and medical conditions.

Psychology's role:

Direct clinical service: participation in all milieu activities, including facilitation of larger community meetings, individual psychotherapy, small process group therapy and psychoeducational classes; intake assessments and diagnostic interviews; therapeutic support delivered as “micro-interventions within the milieu; treatment planning and risk assessment and safety planning. Psychologists and their trainees also provide case-conceptualizations and serve as clinical consultants to other services on the treatment team (e.g., Psychiatry, Social Work, Addiction Therapists, Nursing, etc.). Every trainee at HVRP in the past 4 years has developed and implemented a group of their choice with support from their supervisor.

Administration: Social Workers fill the positions of Chief and Assistant Chief of the Domiciliary Service and Program Manager. Psychologists serve as Coordinators of Clinical Services and are responsible for a number of administrative tasks, such as implementing EBTs and new clinical material; medical records review; participation on VACO and local VISN 21 work groups; and general program development activities. Psychologists also serve as Acting Program Director, when needed.

Research: A psychologist has been the principal investigator on every study conducted at HVRP. There is one psychologist dedicated to 50% time on program evaluation and development. This psychologist is also responsible for presenting quarterly data on HVRP's established goals and benchmark outcomes. Trainees may elect to participate in these activities.

Other professionals and trainees:

- 5 Social Workers (Domiciliary Chief, Domiciliary Assistant Chief, Program Manager, and 3 staff Social Workers)
- 3 Psychologists (2 100% clinical and 1 50% clinical and 50% research)
- 3 Registered Nurses
- 6.5 LVNs
- .75 RNP
- 2 Addiction Specialists
- 1 Recreation Therapist
- 1 Psychiatrist
- 1 Physician
- 13 Paraprofessional Health Technicians or Peer Support Specialists (functioning as peers with the professional staff)

Pre- and post- doctoral psychology, social work, recreation therapy, chaplain interns and nursing students

Clinical services delivered: Empirically supported cognitive-behavioral techniques in an integrated therapeutic community approach. HVRP is a therapeutic community model with EBTs and other clinical practices embedded into the milieu structure in the form of groups, classes, and individual therapies. Services delivered in various settings, including all-resident milieu meetings, group therapy, skills training and psychoeducational classes, for example, relapse prevention, cognitive behavioral therapy, communication skills classes, Skills Training in Affective and Interpersonal Regulation (STAIR), Acceptance and Commitment Therapy, Problem Solving Therapy, CBT for SUDs, Twelve Step

Facilitation, CPT- and PE-based Trauma Recovery Group, Moral Reconnection Therapy, and individual therapy, intake and diagnostic assessments and micro-interventions. Micro-interventions typically consist of brief “in-the-moment” Motivational Interviewing and CBT interventions for any Veteran struggling to integrate into the therapeutic community or to reach their goals. Individual therapy may range from general supportive psychotherapy to structured EBTs, including: CPT and PE for PTSD; CBT for Depression, Insomnia, Anxiety and PTSD; IRT for nightmares; in vivo exposure skills; Seeking Safety and DBT skills; and ACT for depression and anxiety. Depending on available opportunities, Dr. Wytiaz will provide supervision for couples’ therapy using Emotion-Focused Therapy. Given the complexity of the Veterans we serve, psychologists have typically taken an integrative approach to therapy with individual Veterans to allow flexibility and more individualized treatment planning and therapy. Interns and other trainees are encouraged to participate in National VA roll outs, such as CPT, Problem-Solving Therapy; Motivational Enhancement; etc., and to deliver these services to Veterans at HVRP with supervision.

Intern’s role: Individualized training programs negotiated with supervisors. Supervision at HVRP varies by individual supervisor, but always aims to help the trainee meet their individualized goals within this setting or by negotiating with other Domiciliary programs to enhance unique training opportunities. Programs may be designed to include observation of and participation in many program components:

Residential treatment: Facilitating groups and skills-based psychoeducational classes described above, participating in larger milieu meetings, conducting motivational interviews, conducting individual therapy for SUDs and PTSD (and other conditions), performing intake and diagnostic assessments, providing micro-interventions, cognitive screening and may administer psychological testing (e.g., MMPI-2; WAIS-IV; and other assessments for malingering or effort, personality structure and specific cognitive domains). Interns are also expected to attend staff meetings and are encouraged to be an active member of the interdisciplinary team. Interns are accepted as an active member of our treatment team and we encourage all trainees to practice establishing their professional roles and identity.

Clinical research: Participating in ongoing research and program evaluation and development projects concerning the treatment of homelessness, substance abuse, posttraumatic stress disorder and personality disorders with attention to the integration of research and outcome data in the clinical treatment of a homeless Veteran population. Research opportunities may range from evaluation of a group to larger program evaluation efforts to joining an ongoing research project of interest at PAVAHCS.

Outreach and screening: Informing homeless Veterans and service professionals about available services; assessing applicants using a biopsychosocial model. Interns may participate in Outreach and Screening more based on person interest.

Aftercare: Facilitating weekly evening support groups, assisting in developing support systems and managing life problems, vocational counseling and being a liaison between HVRP and other services Veterans are referred to as part of their aftercare plan. Also, HVRP is in the process of rebuilding their Alumni Association and trainees are welcomed to attend outings and events and help plan activities.

Additional training opportunities may include: Attending Veteran’s Court with VJO psychologists and social workers. Working with HUD-VASH and CWT staff. Receiving training in Moral Reconnection Therapy (MRT), Cognitive Processing Therapy (CPT), Prolonged Exposure (PE), Twelve Step Facilitation, and Skills Training in Affective and Interpersonal Regulation (STAIR). If available, training and supervision in Emotion-Focused Therapy for couples. All trainees are encouraged to participate in trainings available at the VA and Stanford. HVRP strongly supports trainees in continued development clinical and research skills.

Amount/type of supervision: Weekly supervision provided by primary supervisor, with additional group supervision with other trainees and staff, including but not limited to daily staff meetings. Treatment approaches include cognitive-behavioral, humanistic, attachment-based psychodynamic, and interpersonal, with consultation available from any of the psychologists on staff across multiple Domiciliary programs.

Didactics: Participation in weekly didactic trainings which have primarily focused on in-depth and interactive exercises on CBT for SUDs, Motivational Interviewing and CPT for PTSD manualized protocols.

Pace: Timely documentation is expected following clinical contact with residents in the program. Interns are expected to complete clinical assessments at the time of admission, treatment plans, group and individual progress notes, and discharge plans. HVRP is a fast-paced training environment and supervisors will collaboratively work with Interns on developing and titrating work load appropriately.

Use of Digital Mental Health tools: Due to the COVID-19 pandemic, clinical services are temporarily being provided via telehealth methods. Interns are also encouraged to become familiar with available VA apps to assist in individual therapies, such as PE Coach and other mindfulness- and SUD-related apps.

The treatment program is characterized by the concept of “personal responsibility” (i.e., “I create what happens to me”) and attention to individual autonomy and strengths, as well as faith in the individual’s capacity for learning new behavior. The program ethic is expressed as “The Five P’s”: Personal Responsibility, Problem Solving, Practice, People (Affiliation), and Play. A unique aspect of the treatment program is its emphasis on play, which is viewed as a competing reinforcer to drugs and alcohol and as a means to lifestyle change. Residents participate in activities such as rock climbing, rowing, sailing, fishing, sports teams (e.g., city-league softball and basketball); holiday, birthday, and graduation parties; and program parties and dances. Within the treatment program, individual therapies and micro-interventions reinforce and supplement group work. Residents move through three phases of treatment during the typical 6-month inpatient stay. To advance from phase to phase, residents must demonstrate increased proficiency in skills and ongoing practice of those skills in an expanding range of settings. In addition, residents are expected to demonstrate leadership, a willingness to consider feedback from staff and peers, and the application of the personal responsibility concept to their lives. Graduation from the program occurs with an additional 13 weeks of aftercare treatment and allows the Veteran to become a part of the Alumni Association.

The overall goal of the internship rotation at HVRP is to provide trainees with a variety of experiences in an applied setting, using a scientist-practitioner framework, and stressing the importance of building an effective, comfortable, professional identity. Trainees are encouraged to participate in the full array of treatment approaches, ranging from the traditional (e.g., group therapy) to the nontraditional (e.g., participation on sports teams or in other program outings and activities). In addition to acquiring and refining clinical skills, goals for interns include the following: developing competency as a member of an interdisciplinary team; acquiring a sense of professional responsibility, accountability, and ethics; becoming aware of how one’s experience and interpersonal style influence various domains of professional functioning; and developing abilities necessary for continuing professional development beyond the internship year (e.g., ability to assess one’s own strengths and limitations, and seek supervision/consultation as needed). HVRP is also dedicated to supporting Interns in seeking Post-Doctoral Fellowships and ultimately professional careers in Psychology.

Trauma Recovery Services (Buildings 350 and 352, MPD)
Residential Men's Trauma Recovery Program (MTRP)
Residential Women's Trauma Recovery Program (WTRP)
PTSD Intensive Outpatient Program (PTSD IOP)

Supervisors: Jean Cooney, Ph.D.
Robert Jenkins, Ph.D.
Jaclyn Kraemer, Ph.D.
Dorene Loew, Ph.D.
Hong Nguyen, Ph.D.
Kendra Ractliffe, Ph.D.
Lizzie Sauber, Ph.D.

Patient population: The Trauma Recovery Services (TRS) treat Veterans with Posttraumatic Stress Disorder (PTSD) and co-occurring conditions who have experienced a wide range of military-related traumatic experiences, including but not limited to war zone and combat-related trauma, and/or military sexual trauma (MST), and/or childhood sexual or physical trauma. We see a diverse group of Veterans with a wide range of intersecting identities, including diversity in age, disability, religion and spiritual orientation, ethnicity/race, socioeconomic status, sexual orientation, and gender. Interns will also become familiar with military culture and impact on the process of clinical service provision.

Psychology's role in the setting: Members of the interprofessional treatment team and lead Clinical Coordinators of each program, providing a wide range of clinical services including biopsychosocial intakes/admissions, treatment planning and reviews, treatment coordination, individual and group psychotherapy, psychoeducation, team meetings with Veterans, being a liaison for aftercare coordination, and transfer/discharge summaries. We value a strengths-based team approach emphasizing cultural humility in treating Veterans. We celebrate the diversity represented in our interprofessional team, including trainees, and the Veterans we serve.

Other professionals and trainees in the setting: Psychiatrists, Nurses, Social Workers, Readjustment Counselor, Recreational Therapists, Chaplain, Art Therapist, Peer Support Specialist, Service Dog Trainers, and trainees from other disciplines.

Nature of clinical services delivered: TRS use both individual and group therapy modalities and prioritize evidence-based treatments (EBTs) for PTSD, including Prolonged Exposure (PE), Cognitive Processing Therapy (CPT), Cognitive Behavioral Therapy (CBT), and CBT for Insomnia. An additional emphasis is concurrent evidence-based treatment for co-occurring substance use disorders, including Motivational Enhancement Therapy (MET), CBT for Substance Use Disorders (SUDs), Dialectical Behavior Therapy (DBT) for SUDs, Nicotine Cessation Therapy, and Contingency Management (CM) for Stimulant Use Disorders. A final area of treatment emphasis includes third-wave interventions, such as DBT, Acceptance and Commitment Therapy (ACT), and mindfulness. Interns will learn challenges to EBT implementation in residential and IOP treatment settings, including translations to Telemental Health Care modes and adaptations to evidence-based approaches for PTSD within a rolling cohort while maintaining fidelity to treatment protocols.

Distinctions between the Residential Men's and Women's Trauma Recovery Programs and PTSD IOP:

Conceptually, the MTRP and WTRP are very similar; they share the same clinical mission to address military-related PTSD using cognitive-behavioral approaches in the context of a residential community. The WTRP currently treats a greater proportion of residents with MST and, conversely, the MTRP treats a greater proportion of residents with combat-related trauma. However, often within the MTRP, 30-40% of residents have experienced MST. Additionally, the women's program carries a smaller daily census and places a greater emphasis on gender-specific service delivery. The PTSD IOP is a time-limited (8-week) program that provides intensive and frequent trauma-focused psychotherapy (PE or CPT or Concurrent Treatment of PTSD and SUD using Prolonged Exposure [COPE]) with Veterans for whom residential treatment is not indicated (i.e., Veterans who are working or attending school, have home

commitments, or who are ambivalent about abstaining from substance use). The PTSD IOP emphasizes concurrent evidence-based treatment for SUDs and/or emotion dysregulation (i.e., DBT) to facilitate successful completion of trauma work. Currently, due to COVID-19, the PTSD IOP is a fully Telemental Health Care program.

Intern's role in the setting: Interns often provide services across all three programs. Each intern will function as an important member of the interprofessional team and will assist with intakes/admissions, case conceptualizations, diagnoses, treatment planning and reviews, treatment coordination, transfers/discharges, and direct provision of clinical services, including individual and group psychotherapy. It is expected that interns will learn and deliver CPT and/or PE and/or COPE, and facilitate or co-facilitate one or more additional psychotherapy group(s) of their choice. The intern's role will be commensurate with his/her comfort level and experience. TRS welcomes interns' input for program development based on areas of expertise and interest as the opportunity arises.

Amount/type of supervision: At least one hour per week of individual supervision, and many opportunities for in-vivo supervision within the therapeutic community. Our setting is unique in that it is the norm for both providers and trainees to do treatment openly in front of each other, which allows for incredible learning and feedback opportunities. Interns often comment that a unique aspect of this rotation is the opportunity to participate in co-therapy with their supervisors and observe various members of the interprofessional team conducting a variety of interventions. Additionally, trainees are provided with the opportunity to participate in the CPT Implementation Program to become certified as a CPT provider, which includes a 2-3 day training and weekly consultation calls for at least six months.

Didactics in the setting: Regular in-service trainings on PTSD-related topics by our clinical staff and invited experts. Group supervision and DBT consultation group may be offered depending on availability of trainees and staff.

Pace: TRS is a fast-paced setting where flexibility and team work are crucial.

Use of Digital Mental Health tools: Currently, due to COVID-19, we are primarily implementing Telemental Health Care (e.g., Veterans Video Connect and Zoom) and have the option of working remote. We collaborate with the National Center for PTSD (NCPTSD) and implement mental health mobile apps based on Veterans' preference. Some current apps in use include PE Coach, CPT Coach, ACT Coach, Virtual Hope Box, CBT for Insomnia, and Mindfulness Coach.

The TRS rotations are ideal training sites for trainees interested in developing and expanding their general clinical skills, as well as, developing and refining their expertise in PTSD and other stress-related disorders. The residential Trauma Recovery Programs are affiliated with NCPTSD and are the first and longest-standing residential treatment programs for Veterans with PTSD in VA.

Many of our Veterans have experienced multiple traumatic events and have co-occurring disorders. The clinical complexity of our population and the program intensity ensure that trainees acquire solid skills in working with PTSD from evidence-based approaches, as well as, the ability to function effectively on an interprofessional treatment team.

The programs focus on approach-oriented coping skills and relapse prevention strategies. Veterans are provided psychoeducation regarding the various effects of PTSD and have the option to participate in PE or CPT or COPE where they learn to interrupt patterns of avoidance and challenge beliefs associated with past traumas, while managing the thoughts, feelings, and physiological symptoms these experiences evoke. TRS has established a reputation for innovation, wherein cutting edge therapies are thoughtfully applied and assessed.

Psychological Services for Medically-Based Populations

Introduction and Overview

The provision of psychological services to medically-based populations provides psychologists with unique opportunities for interdisciplinary treatment. At Palo Alto, these opportunities are found in outpatient and inpatient settings emphasizing traditional medicine, surgery, and rehabilitation. The psychological techniques employed with medically-based populations do not differ greatly from those used with psychiatric populations. However, the philosophy of treatment is unique in several respects.

Aside from the physical aspects of disability, medical patients differ from psychiatric patients in a number of ways. Initially, they tend to see their problems as physical and do not seek psychological intervention. Clients that a psychologist would be seeing may have no preexisting psychological dysfunction. Sometimes, patients with disabilities often evoke strong initial feelings of personal vulnerability and anxiety in staff who work with them.

Assessment and therapy in traditional medical settings focuses on interventions designed to alter health-related problems and treatment of anxiety and depression related to medical illness. Patients are helped to take action to improve their health or cope with a chronic illness. Work with primary care or specialty medical clinic populations is characterized by an emphasis on environmental/functional issues, intermittent short-term interventions, and treating the patient from an interdisciplinary systems perspective. The approach to assessment and therapy with medical rehabilitation populations emphasizes adaptive coping with a difficult situation. The psychologist seeks to help patients learn how to adapt to the challenges of their circumstances. Not only is part of the problem outside the person, at times the solution is also outside. Thus, modifying the environment in which people with disabilities find themselves may be an appropriate therapeutic intervention for the psychologist. This can be accomplished by teaching staff and families appropriate interaction strategies and by working to remove architectural, legal, and attitudinal barriers.

The psychology staff at the VA Palo Alto Health Care System who provide services to medically-based populations recommend that any interns who expect to have contact with people with cognitive, physical, or sensory disabilities consider a medically-based psychology rotation. Each of the training sites described below offers supervised experience with specific disabilities with medical/rehabilitation disciplines, and with patients whose primary problem is not psychiatric. *Interns in any track may choose to train for 6 months in any of the rotations described below*, with the exception that a full year of training in the Behavioral Medicine Program is available only to Behavioral Medicine track interns.

The training goals for rotations serving medically-based populations are to help the intern:

1. Learn to use assessment tools designed for non-psychiatric patients. Focus on strength and coping resources of the individual and learn to adapt traditional assessment techniques where appropriate.
2. Demonstrate knowledge of psychological adaptation to illness and disability and appropriate interventions for non-psychiatric patients. Be able to identify the differences between the effects of trauma, abnormal functioning, and the coping of a "normal" person. The intern must learn to provide short-term counseling for patients and integrate their work within a team treatment plan.
3. Learn specific psychological interventions for this population. Some examples are: CBT for insomnia, relaxation training and CBT for pain, cognitive-behavioral interventions for management of problematic use of food, alcohol, tobacco, and other substances, therapy for sexual dysfunction, and social skills training for the patients with disabilities to manage the social and interpersonal effects of disability.
4. Learn the role of a psychologist on interdisciplinary and multidisciplinary settings. Develop an understanding of the work other disciplines do in treating the illness or disability of your patients.

5. Learn to collaborate effectively with other disciplines in interdisciplinary and multidisciplinary settings, especially in outpatient medical settings where continuity and prompt response to patient needs are a focus.
6. Become aware of the possible pre-existing positive and/or negative prejudices about illness or disability and how to deal with personal feelings of vulnerability and anxiety.
7. Learn the resources available to assist the client after treatment, provide regular follow-up to promote maintenance of treatment gains, and refer to other appropriate psychological resources when you are beyond your limits of expertise.

Behavioral Medicine Program (MB3, PAD)

Supervisors: Stacy Dodd, Ph.D., ABPP
Jessica Lohnberg, Ph.D.
Priti Parekh, Ph.D.
Lianne Salcido Psy.D.

Patient Population: Medical and surgical patients from culturally diverse backgrounds

Psychology's role: Provide consultation, assessment, and intervention to medical patients.

Other professionals and trainees: Medical Attending Physicians, Fellows, Residents, Nurse Specialists, Nurse Practitioners, Pharmacists, Dietitians, Physical Therapists, Social Workers.

Nature of clinical services delivered: Psychological assessment and intervention of behavioral issues related to illness; treatment of anxiety, depression and other DSM-5 diagnoses related to medical problems.

Intern's role: Provide consultation, assessment, and treatment for individuals, couples, groups in specialty medical clinics and the behavioral medicine outpatient clinic.

Amount/type of supervision: One hour individual and 1.5 hours group supervision per week, audio and/or videotaping of sessions expected.

Didactics: One and a half hour Behavioral Medicine seminar weekly September thru May.

Pace: Moderate to fast pace, time is structured, fast turn-around on most notes, more time for comprehensive assessments (e.g., transplant evaluations)

Use of Digital Mental Health tools: Use of video telehealth-to-home technology for assessment and therapy sessions is an option for Veterans. Each intern office is outfitted with a webcam for telehealth services and video meetings. Use of mobile applications to supplement psychological therapies.

The Behavioral Medicine Program at VAPAHCS received the Excellence in Training Award from the Society of Behavioral Medicine in 2012. Ours is the first VA program to have received this honor.

"The BMed track won that SBM award for a reason! My training experience was exactly what I'd hoped for. I thank the BMed supervisors for their time and support, as well as their dedication to their role as supervisors."
~Recent intern

Intern Schedule: Interns opting for the *Behavioral Medicine track* spend a full year, half-time on this rotation. Interns from other training tracks may choose a 6-month, half-time experience on this rotation in the first half of the internship year only. Interns carry a caseload of patients referred directly to the Behavioral Medicine Clinic from anywhere in the hospital. Interns also have the opportunity to co-facilitate group treatment within the Behavioral Medicine Clinic for patients with chronic pain, obesity, and/or insomnia. For more specialized experience, interns are also expected to select two

different Focus Clinics (4 hours each) every six months. Within Focus Clinics, interns are provided with relevant research articles and/or summaries of psychological issues, medical procedures, and

pharmacological information specific to the clinic population. For an overview of each of those clinics, please see the listing below.

For additional information regarding this rotation/training track, please see our website at:

<https://www.paloalto.va.gov/services/mental/behavioralmedicine.asp>

Focus Clinics:

PAIN CLINIC: Assessment and brief treatment of patients with chronic pain from a multidisciplinary perspective. From a Behavioral Medicine perspective, the focus in clinic is primarily on assessment with some brief intervention (e.g., sleep management, use of pacing, relaxation strategies), although there are opportunities for follow-up outside of clinic. Interns gain familiarity with a broad range of pain syndromes and medical interventions, learn brief in-clinic psychological assessment/intervention with this population, gain skills in doing some pre-surgical evaluations (e.g., spinal cord stimulator placement), and learn strategies for integrating into a multidisciplinary team.

4 hrs/week; usually see 3-5 patients/week

On-site Supervisors: Jessica Lohnberg, Ph.D. & Priti Parekh, Ph.D.

HEMATOLOGY/ONCOLOGY CLINICS: Assessment and treatment (brief and longer-term) of patients diagnosed with Hematological and/or Oncological disorders/disease from a multidisciplinary perspective. For interns, the focus in clinic is on introduction of Behavioral Medicine services and distress screening, assessment for patients with identified behavioral medicine concerns, and conducting brief interventions (e.g., pain management, sleep hygiene, behavioral activation, relaxation strategies) or longer-term interventions (e.g., adjustment to life-threatening illness, addressing end of life issues) for patients at different timepoints along the illness trajectory. There are also opportunities for follow-up outside of clinic which include seeing patients while hospitalized and working with patient's family members. Interns gain familiarity with a broad range of Hematological and Oncological disorders/disease, medical interventions, and related sequelae; learn brief in-clinic and longer-term psychological assessment/intervention with this population; and develop strategies for effectively integrating into a multidisciplinary team.

4 hrs/week; usually see 3-4 patients/week

On-site Supervisor: Stacy Dodd, Ph.D., ABPP

MOVE TIME CLINIC (INTENSIVE WEIGHT MANAGEMENT AND BARIATRIC SURGERY): MOVE! is the stepped-care, nationwide VA program aimed at helping Veterans with overweight and obesity lose weight and improve comorbid health conditions. The MOVE TIME Clinic is an interdisciplinary intensive weight management clinic that includes psychologists, physicians, physical therapists, dietitians, surgeons, and often medical students or residents. The goal of the clinic is to provide intensive assessment and treatment for patients who continue to struggle with weight loss despite multiple attempts, and for patients who are medically/psychologically complicated. This clinic serves both patients within the VA Palo Alto HCS as well as patients from other VA hospitals in neighboring VISNs (e.g., from Montana, Idaho, Washington, Oregon, and Nevada). The patients are seen every 3-4 months and clinic appointments typically last 2-4 hrs. Most patients are considering bariatric surgery, but some come for medical management of obesity, including consideration of weight loss medications. The team works closely with the bariatric surgery team. Interns will gain experience working on an interdisciplinary team and conducting assessments with new patients focused on the relationship between obesity and their psychological health. Interns may also provide brief interventions for obesity, depression, anxiety/stress, sleep difficulties, and pain management. Interns will gain experience participating in the weekly interdisciplinary team meetings and with conducting triage and coordination of services with other members of the team and/or providers at other VAs. There is also an interdisciplinary journal club integrated into the clinic that provides the opportunity for interns to learn from and teach to providers from multiple

disciplines. Interns may also conduct pre-bariatric surgery evaluations, join the monthly bariatric team meeting, and observe a live bariatric surgery, if scheduling allows.

4 hrs/week; usually see 2-4 patients/week

On-site Supervisor: Jessica Lohnberg, Ph.D.

ANDROLOGY: Individual assessment and brief intervention for male patients experiencing difficulties with their sexual functioning from a multidisciplinary perspective. Interns conduct assessments with patients and provide consultation to the medical team and/or provide brief cognitive behavioral interventions to individuals or couples to improve sexual functioning (e.g. psychosexual education, cognitive restructuring, communication skills, stimulus control, squeeze technique, sensate focus, etc.). Interns gain familiarity with various sexual difficulties in men across the life span and increase familiarity with medical interventions for male sexual dysfunction. Interns will work closely with the clinic physician, and will learn strategies for integrating into a multidisciplinary team. Interns who choose the Andrology Focus Clinic will also have the opportunity to do assessments for transgender Veterans prior to initiation of cross-sex hormone therapy during their time in the Andrology Clinic.

4 hrs/week; usually see 2-3 patients/week

On-site Supervisor: Stacy Dodd, Ph.D., ABPP

LIVER CLINICS: Individual assessment and brief intervention with patients in Hepatitis C, general Liver, and Liver Transplant Clinics from a multidisciplinary perspective. In the Hepatitis C Clinic, interns become familiar with antiviral treatments for Hepatitis C, learn what factors may be an obstacle to beginning treatment, make recommendations to help patients achieve readiness for treatment, and intervene as needed during treatment to assist with coping and adherence. Interns also see patients through the general Liver Clinic, identifying psychological or behavioral factors that may interfere with effective management of liver disease, and providing brief interventions to target issues such as alcohol use, health behaviors, and/or adherence. In the Liver Transplant Clinic, interns work with patients who are pre-liver transplant and those who have already undergone transplant, with goals of improving patients' psychological adjustment to and management of their medical condition. Patients in the liver clinics tend to have significant drug and/or alcohol histories. Assessments and interventions may therefore include brief motivational interviewing and relapse monitoring and prevention strategies. Interns learn how to work effectively within a multidisciplinary team.

4 hrs/week; usually see 2-4 patients/week

On-site Supervisor: Priti Parekh, Ph.D.

Supervision: Supervision consists of a minimum of one hour of individual and 1.5 hours group meetings each week. Additional, often impromptu, individual sessions are scheduled as needed. Supervision includes, but is not limited to: review of the trainee's cases, problems the trainee identifies, and personal issues related to clinical work or professional development. Interns regularly videotape or audiotape patients and take turns presenting their cases each week during group supervision. A postdoctoral fellow helps interns prepare their case presentations for group supervision and facilitates the peer supervision that occurs in this setting; the fellow may also provide additional individual supervision for some interns. The goals of group supervision are to help the intern become accustomed to consulting with peers and for peers to develop skills at providing such help. Additionally, a portion of group supervision includes Journal Club. Presenters share research articles relevant to the case they are presenting. We strongly emphasize observation (taped and live) of both supervisors and trainees. Trainees have an opportunity to watch their supervisor's clinical work, particularly in the focus clinics.

Our orientation is integrative in nature. Cognitive-behavioral approaches are fundamental to modern clinical health psychology. The experience of major illness raises many issues about what is meaningful in a patient's life and how family and others' reactions to the patient's disease can be understood. Thus, we believe that systems, interpersonal, acceptance-based, and existential approaches also contribute

significantly to clinical health psychology. Our job is to sort out such divergent orientations in a productive and flexible way.

Seminar: We have a Behavioral Medicine seminar that meets each week for one and one-half hours. It starts the first week interns are on service and usually ends at the end of May. The early topics deal with how to function in a medical setting, including: assessing lethality, how psychiatric symptoms can be manifest by medical illness and medication, abbreviations used in charts, and how to negotiate the hospital computer system, write progress notes, and respond to electronic consults. Later we move on to seminars on medical problems, such as: pain, diabetes, cancer, obesity, hepatitis, tobacco dependence, sexual dysfunction, hematological disorders, HIV, organ transplantation, sleep disorders, visual impairment, cardiology, adherence, spinal cord injury (SCI) and death and dying. Seminars typically include: focus on evidence-based treatment, review of relevant topic-specific assessment measures, relevant research articles, and reference to additional recommended texts or articles.

"This year has been amazing! I feel that I've learned so much in the BMed rotations and from the supervision and professional mentoring by BMed supervisors. I feel so lucky and grateful for my time with you all over the past year." ~Recent intern

Cardiac Psychology Program (Building 6, PAD)

Supervisor: Steven Lovett, Ph.D.

See description under Geropsychology section.

Community Living Center (CLC, Building 331, MPD) – Short-Stay/Rehab & Long-Term Care Units

Supervisor: Margaret Florsheim, Ph.D.

Patient population: Patients with complex medical problems requiring either short-term or long-term skilled nursing care with interprofessional team support.

Psychology's role: Clinical services to patients and their families, clinical consultation with other disciplines, psychology-related education of staff and trainees, and participation in the management of team dynamics.

Other professionals: Medicine, Nursing, Pharmacy, Social Work, Occupational Therapy, Physical Therapy, Recreational Therapy, and Dietetics. Trainees from these disciplines may be present. As indicated, the Palliative Care Consult team also works collaboratively with CLC staff.

Clinical services: Screening for cognitive functioning and psychological disorders; neuropsychological and capacity assessment; individual, family and group therapy; behavioral interventions to address problematic behavior; consultation with other disciplines; and psychology education of staff.

Intern's role: Serves as team psychologist for either the short-stay/rehab or long-term care unit.

Supervision: At least one hour of individual supervision per week with additional informal supervision obtained from working side-by-side with the staff psychologist. Opportunities exist for observation during team meetings as well as audiotaped review of patient therapy sessions.

Didactics: Opportunity to participate in VA central office webinar/CLC mental health provider calls and to participate in educational presentations for CLC staff.

Pace: 4-6 contacts a week (patients and families). Progress notes for each contact. Progress notes should be drafted within a day of patient contact. Assessment reports should be written within a week of completing the evaluation.

Use of Digital Mental Health tools: Use of telephone apps, such as Mindfulness Coach, to support healthy coping and enhance psychological interventions.

Unit Assignment: Interns are assigned to either the short-term/rehab or the long-term care unit. No prior experience working with elders or in medical settings is required for either unit.

Pikes Peak Competencies: Training at the CLC offers exposure to clinical work utilizing a biopsychosocial perspective for understanding patients' physical, social and psychological experiences within the setting. Trainees learn about normal and illness-related changes in late life including cognitive, functional changes and end-of-life concerns. Training offers experience in developing rapport with frail elders coping with illness, cognitive and sensory impairments, and institutional placement. The setting offers opportunities to provide assessment and intervention services to medically frail older adults and to learn about modifications to clinical practice needed due to sensory, cognitive and physical limitations. Treatment is provided within an interprofessional context. Trainees learn about the scope of practice and work styles of other CLC disciplines. Trainees develop their ability to work collaboratively with team members representing these other disciplines. The setting also provides multiple opportunities to consider issues related to geropsychology professional practice. These include exposure to ethical and legal issues, such as decision-making capacity and elder abuse reporting, and cultural and individual diversity influences on CLC resident functioning and care.

Building 331 CLC is a medically-focused, 60-bed skilled nursing facility located at the Menlo Park Division. The building is divided into two units. Each unit has a specialty focus – Short-Stay Unit, or long-term care. Patients must be eligible Veterans requiring skilled nursing or intermediate care services, but not intensive medical care. The population is comprised primarily of patients with multiple medical problems, neurological conditions (e.g., stroke, dementia, Parkinson's disease, multiple sclerosis and spinal cord injury) and cancer. Trainees choose to work on one of the two units. Psychological services to both units include assessment of cognitive status and mood, psychotherapy (individual, family and/or group) and consultation to other team members on behavioral issues impacting care. Training in the setting offers opportunities to provide psychological services at bedside and in other non-traditional

settings, and to adapt traditional psychological interventions to suit the physical, cognitive and sensory challenges faced by residents. Trainees learn about the experience of receiving nursing care and its impact on mood and quality of life, work closely with other disciplines to address challenging behaviors that interfere with care, address end-of-life concerns, and provide practical support and education to building staff.

The **CLC Short Stay Unit** bridges the gap between hospital and home. The unit is designed for individuals who no longer need hospitalization in the acute care setting but still require additional medical, nursing, rehabilitative and/or supportive services that cannot be provided in the home. The goal is to assist patients to function more independently at home and in the community. Patient stays can range from weeks to months, with an average stay being 30 days. Training offers interns an opportunity to work in an inpatient medical setting as a member of an effective and collaborative interprofessional team including with nursing staff, physical therapy, and occupational therapy. The age range of unit residents are between 30's-90's, although residents typically are in their 60's and 70's. Many also present with psychiatric and social concerns, such as depression, PTSD, substance abuse, and homelessness. Psychology interventions support the Veteran's rehabilitation needs, adjustment to current medical concerns, and hospitalization, as well as support the interprofessional staff in meeting the Veteran's goals of care. Psychological interventions include screening for cognitive functioning, psychological disorders, and neuropsychological and capacity assessment using instruments including the Montreal Cognitive Assessment, the Hamilton Depression Rating Scale, and the Hopemont Capacity Assessment Interview. Empirically-validated psychotherapy interventions are adapted to cognitive, sensory, and physical limitations, and are used to assist residents with their emotional response to health concerns (e.g., pain and sleep problems) and hospitalization. Interns consult with other team members regarding problematic behaviors and may offer behavioral interventions to increase medical compliance. Opportunities also exist to work with CLC staff and palliative care staff to address end-of-life concerns, particularly with Veterans receiving supportive care during cancer treatments.

The **Long-Term Care Unit** strives to create a sense of community for Veterans to whom the CLC is a permanent home. Training offers experience with multidisciplinary teamwork with medically frail elders. As they offer psychological interventions, interns develop a detailed understanding of daily care as experienced by both staff and residents. Psychological interventions support adjustment to disability and institutional living, and include grief counseling, management of negative emotions, and interventions to address problem behaviors. In addition to individual and family psychological interventions, opportunities exist for interns to co-facilitate psychotherapy groups. Assessment experiences can include assessment of cognitive functioning and psychological disorders, and neuropsychological and capacity assessment. There are also opportunities to work collaboratively with CLC staff to support end-of-life care, since Veterans entering the terminal phase of an illness may request to remain in this familiar environment to receive palliative services.

GRECC/Geriatric Primary Care Clinic (GRECC-Bldg 4, Clinic-5C2, PAD)

Supervisor: Christine Gould, Ph.D., ABPP-gero

Erin Sakai, Ph.D.

See description under Geropsychology section.

Headache Center of Excellence in the Polytrauma Network Site (Bldg 7, B-Wing, PAD)

Supervisors: Joelle Broffman, Psy.D.

Kristina Agbayani, Ph.D., ABPP-CN

Setting Description and Patient Population: The Headache Center of Excellence (HCoE) is a relatively new and rapidly developing outpatient treatment clinic nested within the outpatient Polytrauma Network Site (PNS) of the VA Palo Alto Health Care System. Patients treated in the HCoE have a history of chronic headaches including chronic migraines, which often (though not always) present after, or are otherwise complicated by, traumatic brain injury history. The portion of the patient population treated for posttraumatic headaches often have mild TBI histories (concussions) though given the spectrum of care in the VAPAHCS polytrauma system, it is not uncommon to work with patients stepping down from more acute levels of care after moderate-to-severe TBI and stroke. Also, given that PNS is part of the larger VAPAHCS polytrauma system, patients served in the HCoE can include both veterans and active duty service members. HCoE patients often have additional medical and psychological comorbidities beyond their chronic headaches which uniquely contribute to their headache profiles. Some of the patients are treated by the full HCoE PNS team in an eight-week intensive outpatient treatment program, where they participate in weekly interdisciplinary, non-pharmacological headache management (working with occupational therapy, physical therapy, recreation therapy, psychology, and dietician as clinically indicated). Other patients are treated by individual disciplines, which can include psychology.

Psychology (and Trainee's) Role in the Setting: Direct patient care (typically individual intervention, though there may be group intervention opportunities down the line) and interdisciplinary team consultation. There may also be opportunities for program development (e.g., developing, planning, and implementing evidence-based behavioral health interventions relevant to headache and pain management) as well as program evaluation and clinical research (e.g., contributing to ongoing projects evaluating various elements of the growing HCoE program). The latter opportunities may depend on the length of time the trainee rotates in clinic, amount of time devoted to rotation, and specific needs/activities of the HCoE at time of rotation.

Clinical Services Delivered: Psychodiagnostic/psychosocial intakes with patients including administration, scoring, and interpretation of well-validated measures of pain-related cognitions, self-efficacy, and coping; providing evidence-based interventions to patients for headache and chronic pain management (for instance, cognitive behavioral therapy for chronic headache); routine interdisciplinary team consultation regarding psychological and related variables that may impact patient experience and progress in the interdisciplinary headache management program.

Other Professionals in the Setting: Blind/low vision rehabilitation specialists, Dietitians, Nurse case managers, Occupational therapists, Physiatrists, Physical therapists, Recreation therapists, Social workers, Speech therapists. Trainees from each of these disciplines may also be present. Sometimes patients are also co-managed by specialty disciplines consulted on their care (e.g., Polytrauma Optometry, Neurology).

Didactics: Opportunity to attend monthly National HCoE calls and virtual presentations (they are more process-development oriented and are geared toward medical professionals, though are often interesting and informative). Supervisor(s) will also provide relevant literature for trainees to review as needed and desired.

Amount/Type of Supervision: At least one hour of individual supervision per week, with increases in supervision relative to frequency of direct patient contact as appropriate. Supervisor(s) and trainee will

establish a standing supervision day/time at the outset of the rotation, and there is an open-door policy such that additional supervision can be utilized as often as is needed. Co-treatment with, shadowing of, and observation of the supervisor(s) during team meetings is ongoing.

Pace: Moderate. Client contact can range anywhere from 2-6 clinical contact hours a week, depending on the needs in the HCoE at the time; as group interventions are developed there may be additional clinical contact hours. Psychodiagnostic intake reports and/or progress notes are written for each contact. Psychodiagnostic reports are expected to be in the medical record within 10 business days, and should be submitted to supervisor within five business days for review. Progress notes should be drafted within one business day of patient contact for supervisory review.

Rotation Requirements: Tuesdays (at least 9-11am for IDT), Fridays (at least during the HCoE interdisciplinary intake clinic which runs 12-3pm); remaining hours are flexible and can be tailored to the trainee's schedule. The PNS Headache Center rotation is best fashioned as a half-time (18-hour) rotation; it would also work well in combination with the PNS Neuropsychology rotation on a half- or full-time basis. Please note that in the event of a combined PNS Neuropsychology/Headache Center rotation, prior neuropsychology training is required. For a half-time Headache Center rotation ONLY, no prior experience is required.

Use of Digital Mental Health Tools: The HCoE is using a smartphone app for patients to track their headache characteristics, triggers, use of headache medications, and so forth that has provided a rich repository of data and is an excellent clinical tool that can be used to individualize patient interventions. The HCoE also appreciates the role of telehealth in the clinic to reach a larger demographic of VAPAHCS' catchment area, which has been a boon for many patients to participate in the program when they would be otherwise unable to take time off of work or travel long distances from their home for in-person care. As such, trainees may have the opportunity to conduct clinical interviews and behavioral health interventions via VA Video Connect (VVC) technology.

Competencies Met on this Rotation: a) psychological assessment, b) intervention, c) consultation and interprofessional skills, c) scholarly inquiry and research, d) organization, management, program development, and program evaluation, e) professional issues/development, f) ethical, and legal issues, and g) cultural and individual diversity

**Spinal Cord Injury and Disorders Outpatient Clinic
(Building 7, F143, PAD)**

Supervisor: Jon Rose, Ph.D.

Patient population: Persons with spinal cord injury/dysfunction, ages 18 to 90, but predominantly older adults; duration of injury from a few days to 70 years, living in Northern California, Hawaii, The Philippines, American Samoa, Guam, and parts of Nevada. Although spinal cord dysfunction typically results in permanent physical disability, people often become more functional and socially active as a result of their rehabilitation experience. In the VA, once one has sustained a spinal cord injury or dysfunction, the SCI Service treats any complications and performs health care maintenance. When Veterans live close enough, we also serve as their primary health care team. Therefore, the Psychology intern sees many different problems, including psychological antecedents and sequelae of medical/surgical problems, depression, substance use disorders, parenting, retirement and cognitive deficits in older adults. Due to the great diversity of our patient population, interns also have the opportunity to learn from assessing a full range of human adaptation and achievement, from homeless Veterans to Nobel prize nominees. Most of our patients do not see themselves as mental health patients, even when receiving psychological interventions. We follow our patients at least once a year for life, so there is an opportunity to observe how people adapt to disabilities throughout adulthood, and how adult development and aging interact with disability.

Psychology's role: Clinical services to patients, consultation with other disciplines, psychology education of staff and trainees, and participation in the management of team dynamics.

Other professionals and trainees: Medicine, Nursing, Occupational Therapy, Physical Therapy, Recreation Therapy and Social Work.

Safety: During the pandemic, everyone entering the VA campus is screened for symptoms of COVID. Entrance to our building is restricted to staff, trainees and scheduled patients. No family or other visitors are admitted and everyone is screened again plus has their temperature taken at the entrance. Trainee work stations are > 6 feet apart and masks are required for everyone in the building when this social distance cannot be maintained. Additional precautions are being developed for neuropsychological assessments and we will not begin testing until we are confident this can be done safely. At this time I anticipate we will be performing formal assessments long before the 2021/22 training year.

Nature of clinical services delivered: Screening for cognitive functioning and mental health disorders, neuropsychological and personality assessment, individual brief and long-term therapy with some family therapy, sexuality counseling, behavioral medicine interventions, (obesity, pain, etc.), substance abuse treatment, interdisciplinary dementia treatment, consultation with other disciplines, psychological education of staff and trainees, and participation in the management of team dynamics. Some care is given by telephone or video telehealth to home due to the large catchment area and some patients being on bedrest.

Intern's role: Essentially the same as the Staff Psychologist, including opportunity to supervise practicum students.

Amount/type of supervision: Live supervision of new skills, 1-hour individual supervision, significant informal consultation time and 1-hour group supervision. Interns are supervised in a developmental model of supervision for their two students. Interns are encouraged to become active in the interdisciplinary Academy of SCI Professionals, The Society of Clinical Geropsychology, and/or Division 22 (Rehabilitation Psychology) of The American Psychological Association, and provided appropriate mentorship in professional development. Level of autonomy is negotiated according to training goals.

Didactics: SCI Grand Rounds Thursdays from 8:15 – 9:00 typically consist of reviewing spinal cord and some brain MRIs related to current treatment decisions. Interns have the opportunity to become more familiar with neuroanatomy and the limits of imaging techniques. Occasionally staff will present special topics of interest to all disciplines. Interns may present assessment findings with suggestions to improve care of difficult patients. Tuesday psychology rounds teach concise record review and assessment planning, with an emphasis on what psychology can offer each patient. Group supervision initially provides orientation to the clinic and SCI/D, then covers a variety of topics chosen by trainees including specific disorders, specific tests, psychotherapy orientations, biofeedback, clinical hypnosis, and professional development. Interns schedule individual supervision weekly with Dr. Rose and with each of their own trainees.

Pace: Frequently fast and demanding in clinic, with plenty of time for writing reports and notes on other days. Progress notes should be drafted on the day of patient contact. Assessment reports should be written within a week of completing the exam. Supervisor reviews all notes and reports via e-mail. Workload can be managed within the allotted time.

Use of Digital Mental Health tools: Video Telehealth to Home is frequently used due to our vast catchment area. Since this was already part of our standard training, SCI clinic trainees were able to begin working from home relatively soon after the onset of the COVID-19 pandemic. Currently interns and staff are onsite to facilitate team coordination, but most patients are seen via telehealth. We utilize some mental health apps developed by VA as needed. Examples are ACT Coach and Virtual Hope Box.

Pikes Peak Competencies: are covered in both formal didactics (during group supervision) and supervised practice. Interns will gain knowledge of research and theories of psychological aging. Psychotherapy will include awareness of how normal adult personality development can contribute to vulnerability or resilience. The effects of changes in military culture and other societal developments on various cohorts will be explored in psychotherapy supervision. Biological aspects of aging are often accelerated in persons with spinal cord injuries. This interacts with sociocultural and economic issues that result in age-related challenges in daily living. Interns will gain competence in cognitive assessment of people with sensory and motor deficits, phenomena that often complicate the assessment of older adults. They will observe both positive and negative aspects of cognitive changes associated with aging, and associated ethical concerns such as reluctance to give up driving despite impairment. They will also become proficient in collaborating with professionals from other healthcare professions.

The major goal of the rotation is to learn how to function in a medical setting as a member of an integrated health care team, providing services for the prevention and treatment of psychological distress, coping with cognitive and physical disability and chronic pain, and managing chronic medical conditions. Significant training is also provided in the psychology of aging and its clinical application, so this can be considered a **geropsychology** rotation as well as offering opportunities for training in physical **rehabilitation** and

neuropsychology.

Interdisciplinary assessments are usually done Mondays from 10:00 to 4:00, Tuesdays from 9:00 to 4:00 and Fridays from 10:00 to 3:00. Further psychological interventions and assessment are done at times convenient to the intern. The rotation requires 18 hours per week including Tuesdays from 7:30-2:30. An ideal schedule to allow time for supervision of practicum students includes all day Monday or Friday, Tuesday 7:30 to 2:30 and 4 hours on Thursday.

"I had a wonderful training experience in SCI! I felt well-supported and well-respected by my supervisor and very much appreciate that he broadened my horizons." ~Recent intern

Therapy supervision is available for behavioral, cognitive, client-centered, psychodynamic, motivational interviewing, ACT and systems approaches. Neuropsychological assessment is both actuarial and qualitative. Assessments are targeted to specific questions and designed to take sensory and motor deficits unrelated to brain functioning into account.

Spinal Cord Injury Center (Building 7, PAD)

Supervisors: Daniel Koehler, Psy.D.

TBD

Patient population: Persons with spinal cord injury/dysfunction, ages 18 to 90, mean age 55; duration of injury from a few days to 60 years. Admitted for rehabilitation, medical/surgical problems/complications, neurologic, psychiatric co-morbidities and annual evaluations.

Psychology's role: Assessment and treatment of cognitive, psychological, and social functioning for all patients admitted for acute rehabilitation, annual evaluation, or medical/surgical problems. All patients admitted are screened for SCI Psychology services. Emphasis is on utilizing assessment informed intervention to support immediate and ongoing coping effectiveness with SCI and associated medical and psychiatric conditions. This includes psychological intervention to address issues of mood, coping, pain, treatment adherence, behavior, sleep, etc. SCI Psychology frequently consults and cotreats with the other treatment disciplines as part of a close interdisciplinary treatment approach to address barriers to treatment participation and optimize recovery. Brief neuropsychological evaluations and assessment of patients' functional cognition are often completed to provide recommendations to the IDT and patients regarding strategies to enhance the recovery process. Capacity assessments are also common. SCI Psychology provides psychoeducation and training to staff, patients, and families/caregivers to address cognitive and behavioral considerations associated with immediate and long-term adjustment and coping with SCI/D and complex medical needs.

Other professionals and trainees: Physicians, nurses, dietitians, physical, occupational and recreational therapists, and social workers along with trainees for each discipline.

Nature of clinical services delivered: Brief and extended neuropsychological and psychological assessment, individual and family therapy, sex therapy, social skills training, system consultation, cognitive remediation, staff training, pain management, patient education, and psychological rehabilitation.

Intern's role: Coordinate and participate in the provision of psychological services; assist with team functioning for a designated part of the Service. Interns are assigned a caseload for which they assume full responsibility for all aspects of the patient's psychological care. Comprehensive neuropsychological evaluations requiring interns to select, administer, score, and interpret a battery of tests in order to address the referral question. Opportunities for research are available and encouraged. Several presentations,

publications, and dissertations have been accomplished here by students and the integration of science and practice is supported.

Amount/type of supervision: Individual supervision (at least one hour/week) as well as one hour of group supervision focuses not only on patient and team interaction but also on systems issues. Early in the rotation, goals are mutually agreed upon and set by the intern and supervisor. In addition, an open door policy ensures frequent opportunities to drop in and discuss specific situations.

Didactics: SCI Grand Rounds, frequent SCI In-services, and Patient Education Classes are available for interns.

Pace: Approximately 4-6 patients are admitted weekly, so that interns will be asked to see 2 or 3 for initial evaluation, participate in treatment planning and write appropriate documentation. Number of patients seen per week for follow-up depends on clinical decisions made jointly with interns and supervisor, but has averaged approximately 5 per week. Interns will carry 1-2 neuropsychological cases at a time. The evaluation is encouraged to be timely in order to provide necessary recommendations to the team and patient. The pace is relatively fast, requiring the intern to be self-initiating and self-structured.

Use of Digital Mental Health tools: Active use of various Mindfulness Meditation apps as well as other mental health based smart phone apps.

Time requirement: Full-time 3 months or half-time, 6-month rotation

Specialty Competencies Emphasized in Training Rotation:

Rehabilitation Psychology

Neuropsychology

Geropsychology

The Spinal Cord Injury Center is a 48-bed facility located in Building 7 at the Palo Alto Division. The SCI Center is internationally recognized for providing excellent, state-of-the art care to newly injured Veterans as well as long-term follow-up. In the VA, once one has sustained a spinal cord injury or dysfunction, the SCI service treats any complications as well as performs health care maintenance. Therefore, many different problems are seen by the Psychology intern during this inpatient medical/surgical rotation. Although spinal cord injury is a serious medical condition, people often become more functional and socially active as a result of their rehabilitation experience. SCI rehabilitation patients are often hospitalized for a number of months, and the staff has an opportunity to get to know them and their families quite well. Usually patients are not admitted for psychological reasons, so providing psychological services may require the intern to function informally and casually, while maintaining a professional, helpful demeanor.

"I absolutely loved Spinal Cord Injury. I loved learning about SCI, associated health/medical/psychosocial problems, and being part of a very well-rounded interdisciplinary team. The work was dynamic – individual therapy, case consultation, some supervision, co-treatment with PT and OT, and an opportunity to participate in a home visit. I found the supervisors to be extremely supportive of me as an individual intern and Psychology as an integral part of the SCI team." ~Recent intern

The major goal of the rotation is to learn how to function in an inpatient rehabilitation and medical/surgical setting as a member of an interdisciplinary team, providing services for the assessment, prevention, and treatment of neuropsychological and psychological symptoms.

The Western Blind Rehabilitation Center (Building T365, MPD)

Supervisor: Laura J. Peters, Ph.D.

Patient population: Primarily geriatric Veterans coping with visual impairment and other health issues. A subset of Active Duty, younger and older Veterans who have brain injuries and sight loss for our Comprehensive Neurological Vision Rehabilitation Program.

Psychology's role: The psychologist provides direct care to Veterans and serves as a consultant to rehabilitation therapists and other supportive services.

Other professionals and trainees: Other staff members are Masters and Baccalaureate level trained Blind Rehabilitation Therapists focusing on orientation and mobility, visual skills, manual skills, living skills and technology. Orientation and Mobility and Living Skills Trainees are often present, as are Psychology Fellows. Other staff present include Medical Provider, Nursing, Recreation Therapy and Social Work.

Clinical services provided: Intake Evaluations and Cognitive Screens of Veterans on admission; participation in treatment planning meetings; provision of short-term psychotherapy; Psychoeducational and Relaxation group leader; and interventions with staff working with the Veterans. The psychology intern could also meet with Veterans' family members who come to the Blind Center for Family Training.

Intern's role: Interns participate in evaluations of Veterans, provision of short-term individual psychotherapy, running a large Psychoeducational support group and Relaxation Group, presenting at treatment planning meetings, and interventions with staff working with patients.

Amount/type of supervision: Two hours of formal supervision would be offered for a half-time rotation. Informal supervision would be readily available as the supervisor is on site. Fulltime three month rotations might also be available.

Didactics in the setting: Interns are given didactic and hands-on Blind Rehabilitation Training. Trainees are sensitized to the issues of working with Veterans with acquired disabilities.

Pace: For a half-time intern, working-up one to two patients a week with written report with turn-around of one to two working days is required. The Intern may also carry two to three patients for short-term psychotherapy as available. Progress notes are written on each psychotherapy session as soon as possible. Attendance at patient treatment planning meetings and consultation with staff would also be part of the interns' weekly duties as possible.

Use of Digital Mental Health tools: Have used Mental Health Apps for smart phones and tablets.

Pikes Peak Competencies: Cognitive Psychology and Change; Social/Psychological Aspects of Aging; Biological Aspects of Aging; Psychopathology Issues Relevant to Aging; Problems in Daily Living; Sociocultural and Socioeconomic Factors; Specific Issues in Assessment of Older Adults; Assessment of Therapeutic and Programmatic Efficacy; Treatment Modalities adapted for those who are aging with sensory deficits: Individual Psychotherapy (Psychoeducational, Cognitive-Behavioral, Mindfulness, Motivational Interviewing, Acceptance and Commitment Therapy, Relaxation, Pain Management, Sleep Interventions; Smoking Cessation) ; Group Psychotherapy (Psychoeducational and Peer Support); Family Psychoeducation; Risk Management: Suicide and Elder Abuse and Self-Neglect Screening; Suicide Safety Plans; Coordinating Mental Health Follow-up Care; Decisional Capacity; Application for Probate Conservatorship; Consultation with Psychiatry as appropriate; Daily interaction with an interprofessional team; Special Ethical Issues: Confidentiality is at the Team Level.

The Western Blind Rehabilitation (WBRC) is recognized internationally as a leader in rehabilitation services, training, and research. WBRC is a 24-bed residential facility, which provides intensive rehabilitation to legally blind Veterans learning to adjust to and manage sight loss. It is staffed by 30 blind rehabilitation specialists and over 200 Veterans go through the program each year.

The typical client is approximately 75 years old and is legally blind due to some progressive, age-related disease, although the age range is from the 20's through the 90's. The individual whose vision becomes impaired often must face a variety of losses. Those with partial vision, as opposed to those who

are totally blind, often must learn to live with a "hidden disability," that is a disability not readily identifiable by others. Such hidden disabilities often elicit suspicion and discomfort in others, and lead to interactions in which the visually impaired individual is "tested". Finally, many of the individuals who are admitted to WBRC, in addition to losses and changes associated directly with vision loss, face losses associated with retirement from employment and from chronic illness. Fortunately, losses and changes experienced by those with vision impairment are offset by the acquisition of adaptive skills and personal reorganization. The psychologist's role at WBRC is to facilitate the process of adaptive adjustment to sight loss through the provision of assessment, psychotherapy, and staff consultation. The orientation of the supervisor is Cognitive-Behavioral. The focus is on brief psychotherapy since Veterans are in the program for six to eight weeks on average. Both concrete actions Veterans can take to improve their lives as well as changes in thinking patterns related to how to go on in the face of a catastrophic disability are addressed. Initially interns observe the supervising psychologist. Interns then move toward being observed while on the job and then working autonomously with supervision.

Date: 8/19/20

Women's Health Psychology Clinic (Building 5, A-wing, PAD)
Supervisor: Veronica Reis, Ph.D.

Patient Population: Medical and mental health patients from culturally diverse backgrounds

Psychology's role: Triage, treatment planning, assessment, individual psychotherapy, opportunities for collaboration with primary care behavioral health psychiatrist, collaboration with medical providers, consultation to interdisciplinary Women's Health Pain Clinic team.

Other professionals and trainees: Attending Physicians, Attending Psychiatrist, Medical trainees (medical students, interns and residents), Primary Care Behavioral Health Psychologists, Psychology Technician, Nurse Practitioners, RNs, LVNs, Pharmacists, Dieticians, Social Workers, Clerical Staff.

Nature of clinical services delivered: Clinical services provided range from brief behavioral health interventions and/or problem solving sessions, to 8-12 sessions of psychotherapy focused on meeting specific goals identified during assessment. Bibliotherapy, integration of technology and referral to specialty mental health are utilized.

Intern's role: Triage, assessment, treatment planning, psychotherapy, consultation to interdisciplinary team,. Consultation opportunities in Women's Health Center Oncology Clinic, Gynecology Clinic and Women's Chronic Pain Clinic.

Amount/type of supervision: One hour individual supervision plus "on the fly" supervision during triage.

Pace: Moderate pace. Progress notes and triage assessments should be drafted within 24 hours. Evaluations should be written within one week of initial meeting.

Use of Digital Mental Health tools: Encourage and support use of VA mobile apps, as appropriate, as well as VA Video Connect (telehealth) appointments.

Women's Health Psychology (WHP) can be conceptualized as a hybrid of Primary Care Behavioral Health, Behavioral Medicine, and Women's Mental Health. The clinic is co-located in the Women's Health Center (the General Medical Clinic for women) so as to address barriers to mental health treatment engagement among patients. Via "warm handoffs" initiated by the patients' medical providers, especially primary care providers, we increase the likelihood that patients will engage in care and if warranted, facilitate the transfer of patients requiring higher level treatment to the Women's Counseling Center (WCC). The WHC psychologist's primary responsibilities can be summarized as detection, prevention, and stabilization. *Detection:* We provide follow-up to positive alcohol, depression, IPV and PTSD screenings administered in the primary care clinic and respond to referrals from primary care and other medical providers. *Prevention:* We offer primary or secondary prevention interventions to stave onset or forestall worsening of mental health disorders and/or medical conditions. We administer brief behavioral health interventions targeting unhealthy behaviors such as overeating, smoking, sedentary lifestyle, and poor sleep hygiene to promote wellness among our patients. *Stabilization:* We offer evidence based psychotherapies to help stabilize patients with acute psychiatric issues, such as PTSD, depression, and anxiety disorders. We refer to Women's Counseling Center following or concurrent with treatment in our clinic, if it is determined that the patient requires a higher level of care.

The clinic theoretical orientation is primarily ACT and CBT. Individual treatment ranges from very brief behavioral health-oriented interventions (2-4 sessions) to 8-12 sessions of evidence-based psychotherapies such as CBT, CPT (Cognitive Processing Therapy), Prolonged Exposure (PE), Acceptance & Commitment Therapy (ACT), or Dialectical Behavior Therapy (DBT). Periodically we provide individual treatment via Telemental Health, including telephone and video appointments. Individual therapy in WHC may be augmented by group therapies provided at WCC. For those interested in ACT, Dr. Reis co-leads the ACT mini-rotation with Dr. Robyn Walser and seamlessly blends the 2 to augment the mini-rotation experience.

Interns have the potential to function as part of a multidisciplinary team providing triage assessment during primary care and Women's Health subspecialty clinics. They also engage in treatment planning, intake evaluations, and time-limited individual treatment interventions. They provide consultation to medical providers within the VA system regarding women's mental health and collaborate with the women's primary care based psychiatry clinic. Interns have the potential to co-lead groups with the postdoctoral fellow or Dr. Reis and are encouraged to develop new groups based on their clinical interests; however, it is often challenging to recruit enough women to sustain a group at any given time. Interns are expected to serve as part of the Women's Pain Clinic on Tuesdays (3-4 mornings per month and afternoons once per month), collaborating with a medical pain specialist (anesthesiologist) and physical therapist. There are also opportunities to serve as a psychology consultant to the Oncology Clinic on Mondays, based on intern's interest. Structured supervision is a minimum of 1 hour each week and also occurs within the context of the primary care setting.

Geropsychology Training

Introduction

Interns in the Geropsychology track will have at least 50% of their internship training in Geropsychology and the other 50% in rotations with a broader or different clinical focus. Currently we have two slots reserved for broad Geropsychology training and one slot reserved for an intern with both Geropsychology and Neuropsychology interests and training goals (please see the “[Geriatric Neuropsychology](#)” section for more information about this internship track training opportunity). Interns in the Geropsychology track will work with the Director of Training and Geropsychology staff to determine rotation experiences in their track from those listed in this section. *Interns in any track may choose to train in any of the rotations described below*; however, interns in the Geropsychology track have preference in the assignment of these rotations. Most of the rotations listed here may be selected for a six-month, half-time training experience (in some cases, three-month, full-time rotations may be possible).

Most of the Geropsychology rotations occur in interprofessional treatment settings, an approach to care deemed especially effective for older adults with complex needs (American Geriatrics Society Geriatrics Interdisciplinary Advisory Group, 2006). Interprofessional teams, in which professionals from many disciplines work collaboratively, can respond to the multiple and often interactive needs of older adults. For a psychology intern, this experience offers the opportunity to learn about the physical and mental health care needs of older adults, creative use of VA resources to meet their needs, and how to represent a psychological point of view effectively to physicians, nurses, pharmacists, social workers, and other health care professionals. In addition, interprofessional team members develop skills for effective group communication, problem solving, conflict resolution, developing interprofessional team treatment plans, and sharing of leadership roles.

In these settings, psychology collaborates actively with other professions in developing a holistic assessment of the older adult patient and the home support network. The psychologist prioritizes problems, defines what psychological interventions should be offered and how they can be integrated with the care provided by other team members. The psychologist works with the team in evaluating the outcomes of individual and team interventions, and in refining or redesigning treatment plans. Psychology interns, therefore, will strengthen their own assessment and therapy skills, and they will also learn how geropsychology's specialized knowledge and skills combine with those of other team members when providing care to older adults and their families.

As mentioned earlier, interns are expected to participate in a training experience focused in geropsychology or in a medically-based setting. Many intern applicants wonder whether working with older adults might be boring, depressing or morbid. We think just the opposite. We view aging as a privilege and an experience that differs widely based on a person's developmental experiences, access to resources, and other factors both within and beyond a person's control. Working with older adults requires a high dose of cultural humility, a strong commitment to diversity and awareness of intersectionality, and a desire to engage in self-reflective practice given the topics that can often surface when working with this population (e.g., one's view of aging, illness and disability; being seen by a patient as a grandchild). Older adults constitute a highly diverse population of individuals with a range of life experiences across multiple sociohistorical and political eras (e.g., various Civil Rights movements, the Vietnam War). They often deal courageously and resiliently with problems posed by changes to their health, sensory abilities, and mobility, multiple losses (e.g., retirement, death of loved ones), and the need to adapt to environments that challenge or support their functioning. Older adults bring a wealth of lifetime experiences to these endeavors and often hold perspectives about themselves and life more broadly that come with advanced age and cohort experiences (e.g., evolving views of LGBTQ+ identities). Given the aging demographics of our Veteran population, interns interested in working with Veterans benefit from some Geropsychology training. When interns

approach older adults with an attitude of respect and dignity, as well as compassion and a desire to provide care, they find that they can learn about themselves and their own lives, as well as offering valuable psychological services to older patients.

Pikes Peak Competencies

The Geropsychology track is designed to offer training experiences consistent with the Pikes Peak Model for Training in Professional Geropsychology (Knight, Karel, Hinrichsen, Qualls, Duffy, 2009). The VA Palo Alto internship program uniquely offers the opportunity to deliver geriatric services in a number of settings (e.g., outpatient mental health, outpatient medicine, inpatient medicine, inpatient psychiatry, long-term care, rehabilitation, hospice, in-home, and research). In these settings, trainees work on interprofessional teams and provide conceptualizations from a psychological perspective while collaborating with providers from a number of disciplines. In addition, trainees may also educate other providers on these teams about psychological and/or aging issues. Rotations also help trainees solidify assessment (e.g., psychological, cognitive, neuropsychological, decision-making and capacity, risk) and intervention skills commonly used with older adults (e.g., grief, end-of-life, caregiving, chronic health problems, healthy aging). Older adult care often is complex and includes the broader family unit; trainees often have opportunities to work with families on various rotations or through the Family Therapy mini-rotation. Finally, trainees solidify their understanding of biopsychosocial conceptualizations, specific ethical and legal issues (e.g., informed consent, capacity and competency, elder abuse and neglect), and cultural/individual diversity issues in individual supervision with staff geropsychologists and through the various didactics offered.

Geropsychology Didactics

The Geropsychology Seminar and monthly Geropsychology journal club are required for geropsychology trainees. The seminar meets on the first and third Thursdays of each month from 2:30-4:30pm and occurs in tandem with the Neuropsychology seminar which meets at the same time on the alternate Thursdays of the month. Both seminar series present topics that may be of interest to trainees with geropsychology and/or neuropsychology interests. The seminar provides an opportunity for geropsychology trainees (practicum students, interns, fellows) to gather as a peer group and meet with clinical and research geropsychologists in addition to their clinical supervisors. The seminars start each year in September and end the last week of July or early August. Seminars typically include a presentation from an invited speaker from within or outside of our VA system. Trainees also have the opportunity to present clinical cases from their rotations as well as their own research. The seminars address a wide range of topics in neuropsychology and geropsychology, as well as many topics which bridge these connected areas of interest such as dementia, substance abuse, psychopathology, and working with caregivers. Recent topics have included medication use and polypharmacy in the elderly, geriatric ethical issues, loneliness, elder abuse, intimate partner violence, role of culture in evaluating decision making ability, and older adults in forensic settings. Professional development topics, such as working on interdisciplinary teams, board certification, and roles of geropsychologists are also discussed. The Geropsychology journal club is a new addition to our training program and will occur monthly. This series is also required for Geropsychology interns and focuses on addressing the foundational knowledge, attitudes, and skills needed for competent geropsychological practice. The day/time of this series is pending.

In addition, the GRECC (Geriatric Research, Education, and Clinical Center) has a weekly seminar series focusing on current issues in geriatric care. The seminar currently occurs on Tuesdays from 3-4pm.

Another optional didactic for interns is the Geriatric Psychiatry and Neuroscience Grand Rounds series showcasing the work of distinguished Geriatric Psychiatry researchers. This series features experts who have informed and pioneered the field of geriatric psychiatry using innovative frameworks, tools, and techniques from neuroscience, cognitive psychology, clinical psychology, genetics, and more. Depending

on availability, speakers typically present monthly on Mondays from 4-5pm. As this series serves to facilitate discussions between Stanford and VA Palo Alto researchers, experts from both systems often present and attend. This Grand Rounds successfully attracts researchers from both institutions ranging from trainees to senior faculty. Esteemed presenters have included Mary Mittelman, PhD from NYU who presented on caregiver stress interventions; Nancy Pachana, PhD from the University of Queensland in Brisbane, Australia who spoke about her geriatric anxiety assessment from an international perspective; and Bill Seeley, MD from UCSF who presented on brain imaging and other biological markers of frontotemporal dementia spectrum disorders. The schedule for this didactic is posted on the Stanford website at <https://med.stanford.edu/psychiatry/education/gpngrandrounds.html>.

Cardiac Psychology Program (Building 6, PAD)

Supervisor: Steven Lovett, Ph.D.

Patient population: Patients with congestive heart failure (CHF), recent cardiac events (heart attacks, bypass surgery) and other forms of cardiovascular disease. Patients being considered for heart transplants and those receiving post-transplant care.

Psychology's role: Direct service to patients and families; participation in multidisciplinary patient education programs; consultation with other program staff and cardiologists; & participation in the Cardiology Transplant Clinic.

Other professionals: The Cardiac Transplant clinic includes medicine, nursing, and cardiology fellows in medicine.

Clinical services: Assessment, psychotherapy, & behavioral medicine interventions with cardiac patients and their families when referred by cardiologists within Cardiology service. Pre-transplant evaluations, interventions for diet & medication compliance, sleep disturbance and mood disorders for the Cardiac Transplant clinic patients.

Intern's role: Serves as the team psychologist for the Cardiac Transplant Clinic, and a consulting psychologist for Cardiology Service.

Supervision: 2 hours individual supervision per week. 1 hour of group supervision when more than one trainee is working with the program. Some observation during patient therapy sessions, patient education groups, and team meetings. Audiotape review of patient therapy sessions, when taping is feasible. Theoretical orientation emphasizes a social learning perspective within a brief treatment model. Evidence based interventions are emphasized.

Didactics: Part of supervision sessions, as needed.

Pace: 1-4 patients seen during the Cardiac Transplant Clinic. Up to six CHF or Transplant Clinic patient follow-up or cardiology consultation sessions per week outside of the clinic.

Use of Digital Mental Health tools: We encourage the collaborative use of VA mobile apps if indicated for the particular patient.

The Cardiac Psychology Program provides psychological services to patients with heart disease. We participate in the weekly Cardiac Transplant Clinic and accepts referrals for patients with other forms of heart disease. Specific services provided by psychology interns include

- Neuropsychological screenings, including administration of the Cognistat, RBANS, and other screening instruments as needed.
- Individual and family therapy for depression, anxiety, anger management, sleep disturbances, issues of grief and loss, caregiver stress, and other forms of emotional distress.
- Assistance in developing adherence programs for medication usage, dietary restrictions and exercise maintenance.
- Consultation with other CHF team and cardiology staff about methods of enhancing patient adherence to treatment regimens.

Interns are also directly involved in any on-going program evaluation and research efforts associated with the clinical activities listed above. Supervision includes joint clinical sessions with the supervisor as well as 1 – 1.5 hours of individual supervision per week and periodic group supervision when more than one trainee is involved in the rotation. The predominant theoretical orientation is social learning theory with an emphasis on shorter-term treatment. Training and supervision about health care team dynamics is also included.

Community Living Center (CLC, Building 331, MPD) – Short-Stay/Rehab & Long-Term Care Units**Supervisor: Margaret Florsheim, Ph.D.**

Patient population: Patients with complex medical problems requiring either short-term or long-term skilled nursing care with interprofessional team support.

Psychology's role: Clinical services to patients and their families, clinical consultation with other disciplines, psychology-related education of staff and trainees, and participation in the management of team dynamics.

Other professionals: Medicine, Nursing, Pharmacy, Social Work, Occupational Therapy, Physical Therapy, Recreational Therapy and Dietetics. Trainees from these disciplines may be present. As indicated, the Palliative Care Consult team also works collaboratively with CLC staff.

Clinical services: Screening for cognitive functioning and psychological disorders; neuropsychological and capacity assessment; individual, family and group therapy; behavioral interventions to address problematic behavior; consultation with other disciplines; and psychology education of staff.

Intern's role: Serves as team psychologist for either the short-stay/rehab or long-term care unit.

Supervision: At least one hour of individual supervision per week with additional informal supervision obtained from working side-by-side with the staff psychologist. Opportunities exist for observation during team meetings as well as audiotaped review of patient therapy sessions.

Didactics: Opportunity to participate in VA central office webinar/CLC mental health provider calls and to participate in educational presentations for CLC staff.

Pace: 4-6 contacts a week (patients and families). Progress notes for each contact. Progress notes should be drafted within a day of patient contact. Assessment reports should be written within a week of completing the evaluation.

Unit Assignment: Interns are assigned to either the short-term/rehab or the long-term care unit. No prior experience working with elders or in medical settings is required for either unit.

Use of Digital Mental Health tools: Use of telephone apps, such as Mindfulness Coach, to support healthy coping and enhance psychological interventions.

Pikes Peak Competencies: Training at the CLC offers exposure to clinical work utilizing a biopsychosocial perspective for understanding patients' physical, social and psychological experiences within the setting. Trainees learn about normal and illness-related changes in late life including cognitive, functional changes and end-of-life concerns. Training offers experience in developing rapport with frail elders coping with illness, cognitive and sensory impairments, and institutional placement. The setting offers opportunities to provide assessment and intervention services to medically frail older adults and to learn about modifications to clinical practice needed due to sensory, cognitive and physical limitations. Treatment is provided within an interprofessional context. Trainees learn about the scope of practice and work styles of other CLC disciplines. Trainees develop their ability to work collaboratively with team members representing these other disciplines. The setting also provides multiple opportunities to consider issues related to geropsychology professional practice. These include exposure to ethical and legal issues, such as decision-making capacity and elder abuse reporting, and cultural and individual diversity influences on CLC resident functioning and care.

Building 331 CLC is a medically-focused, 60-bed skilled nursing facility located at the Menlo Park Division. The building is divided into two units. Each unit has a specialty focus – Short-Stay Unit, or long-term care. Patients must be eligible Veterans requiring skilled nursing or intermediate care services, but not intensive medical care. The population is comprised primarily of patients with multiple medical problems, neurological conditions (e.g., stroke, dementia, Parkinson's disease, multiple sclerosis and spinal cord injury) and cancer. Trainees choose to work on one of the two units. Psychological services to both units include assessment of cognitive status and mood, psychotherapy (individual, family and/or group) and consultation to other team members on behavioral issues impacting care. Training in the

setting offers opportunities to provide psychological services at bedside and in other non-traditional settings, and to adapt traditional psychological interventions to suit the physical, cognitive and sensory challenges faced by residents. Trainees learn about the experience of receiving nursing care and its impact on mood and quality of life, work closely with other disciplines to address challenging behaviors that interfere with care, address end-of-life concerns, and provide practical support and education to building staff.

The **CLC Short Stay Unit** bridges the gap between hospital and home. The unit is designed for individuals who no longer need hospitalization in the acute care setting but still require additional medical, nursing, rehabilitative and/or supportive services that cannot be provided in the home. The goal is to assist patients to function more independently at home and in the community. Patient stays can range from weeks to months, with an average stay being 30 days. Training offers interns an opportunity to work in an inpatient medical setting as a member of an effective and collaborative interprofessional team including with nursing staff, physical therapy, and occupational therapy. The age range of unit residents are between 30's-90's, although residents typically are in their 60's and 70's. Many also present with psychiatric and social concerns, such as depression, PTSD, substance abuse, and homelessness. Psychology interventions support the Veteran's rehabilitation needs, adjustment to current medical concerns, and hospitalization, as well as support the interprofessional staff in meeting the Veteran's goals of care. Psychological interventions include screening for cognitive functioning, psychological disorders, and neuropsychological and capacity assessment using instruments including the Montreal Cognitive Assessment, the Hamilton Depression Rating Scale, and the Hopemont Capacity Assessment Interview. Empirically-validated psychotherapy interventions are adapted to cognitive, sensory, and physical limitations, and are used to assist residents with their emotional response to health concerns (e.g., pain and sleep problems) and hospitalization. Interns consult with other team members regarding problematic behaviors and may offer behavioral interventions to increase medical compliance. Opportunities also exist to work with CLC staff and palliative care staff to address end-of-life concerns, particularly with Veterans receiving supportive care during cancer treatments.

The **Long-Term Care Unit** strives to create a sense of community for Veterans to whom the CLC is a permanent home. Training offers experience with multidisciplinary teamwork with medically frail elders. As they offer psychological interventions, interns develop a detailed understanding of daily care as experienced by both staff and residents. Psychological interventions support adjustment to disability and institutional living, and include grief counseling, management of negative emotions, and interventions to address problem behaviors. In addition to individual and family psychological interventions, opportunities exist for interns to co-facilitate psychotherapy groups. Assessment experiences can include assessment of cognitive functioning and psychological disorders, and neuropsychological and capacity assessment. There are also opportunities to work collaboratively with CLC staff to support end-of-life care, since Veterans entering the terminal phase of an illness may request to remain in this familiar environment to receive palliative services.

Geriatric Outpatient Mental Health (MHC, Building 321, MPD)

Supervisor: Erin Sakai, Ph.D.

Patient population: Older Veterans (65+) typically from the Vietnam, Korean, and WWII-eras. Individuals in this setting often have multiple and co-occurring diagnoses, medical and substance use issues, and psychosocial stressors and trainees are challenged to develop skills in implementing evidence-based treatments in complex real-world situations.

Psychology's role: Psychologists serve as Mental Health Treatment Coordinators, who conduct initial new-to-clinic assessments, create treatment plans, provide individual therapy, facilitate psychotherapy or psychoeducation groups, consult with other team members or services, engage in clinic committees, and respond to immediate psychiatric issues which may include voluntary or involuntary hospital admissions.

Other professionals: Psychiatrists, Social Workers, Nurses, Art Therapists, Vocational Rehabilitation staff (CWT), Psychology Postdoctoral Fellows, Psychology Practicum Students, Psychiatry Residents, Social Work Interns.

Clinical services: Intake evaluations and treatment planning, individual and group psychotherapy, Mental health treatment coordination, Medication evaluation and follow-up, Liaison/consultation with other programs and providers, Assessing and dealing with emergencies and hospital admissions as necessary. Interventions often target issues such as depression, anxiety, PTSD, substance use, role/life transitions (e.g., retirement, health changes, etc.), anger, assertiveness, caregiver stress, medical issues (e.g., pain, sleep, weight, etc.), and end-of-life concerns utilizing cognitive-behavioral, acceptance-based, and interpersonal approaches.

Intern's role: Interns have the opportunity to function and contribute much as the Staff Psychologist does, simply under supervision, and with variations depending upon experience and learning needs. Thus, interns will have the opportunity to treat Veterans with a wide variety of diagnoses and disorders from mild to severe; lead or co-lead psychotherapy or psychoeducational groups; provide individual psychotherapy; conduct initial assessments; create treatment plans; liaise with other services, including Inpatient Psychiatry, Domiciliary Service, Compensated Work Therapy (CWT) program, addiction treatment services, etc. Interns often include the Family Therapy or ACT mini-rotation as part of their MHC training experience and may have opportunities to provide services to rural Veterans through Telemental Health.

Supervision: Interns receive at least one hour of individual and one hour of group case consultation/supervision each week. Supervision can also include co-leading a therapy group or psychoeducation class with the supervisor, video/audiotaping sessions for later review in supervision, and observation during team meetings. Individual supervision addresses intake assessments and the intern's clinical caseload of individual and group therapy clients, including case conceptualization, treatment planning, and familiarization with new therapies. Supervision also covers diversity, professional development, treatment team functioning, and program development and systems issues.

Didactics: The weekly, hour-long group supervision meeting includes readings on a variety of topics and issues, watching and discussing video of therapists from differing theoretical orientations conducting therapy, and clinical case presentations. The structure is an open format meant to foster discussion about treatment, theory (e.g., cognitive-behavioral, psychodynamic, interpersonal, humanistic, and existential models), ethics, systems issues, and professional identity/development.

Pace: Moderate and steady. 4-6 contacts a week. Chart review and progress notes for each contact. Preparation for individual and therapy/psychoeducation groups.

Unit Assignment: No prior experience working with older adults is required.

Use of Digital Mental Health tools: Mobile Apps, telemental health.

Pikes Peak Competencies: The Geriatric Outpatient Mental Health rotation offers opportunities to integrate aging theory into clinical practice. Use of psychometrically sound screening instruments for cognition and psychopathology and risk assessments are common in this setting. Interns will provide interventions that target common issues for older adults, making adaptations or adjustments when needed. Consideration of biopsychosocial factors will be an important part of case conceptualization and

intervention. Collaboration as part of an interprofessional team is expected. Consultation with families, other professionals and programs, agencies or organizations may also be included in outpatient work as appropriate. Trainees can be involved in providing training about geropsychological issues through in-services.

The Geriatric Outpatient Mental Health setting offers opportunities to work with older adults representing the wide range of health and personal factors reflected in the outpatient setting. This includes individuals with a variety of experiences associated with racial/ethnic, socioeconomic, cognitive, spiritual, and medical factors. Interns learn to conceptualize and integrate the presenting issues to develop a strong treatment plan and intervention while working with the Veteran and care team.

Date: 8/24/2020

GRECC/Geriatric Primary Care Clinic (GRECC-Bldg 4, Clinic-5C2, PAD)

Supervisors: Christine Gould, Ph.D., ABPP-Gero
Erin Sakai, Ph.D.

Patient population: Older adults with complex medical and psychosocial problems who require an interdisciplinary team for optimal primary health care.

Psychology's role in the setting: Clinical services to patients both as a part of the team clinic and outside of clinic, consultation with other disciplines, psychology education of staff and trainees from different disciplines, participation in the management of team dynamics, and participation with ongoing clinical demonstration projects (quality improvement).

Other professionals and trainees: Medicine, Nursing, Pharmacy, Optometry and Social Work; all disciplines may have trainees at various levels (students, interns, residents, and fellows.)

Nature of clinical services delivered: Services are delivered both in the context of the team clinic as well as outside of the clinic for patients who require more in-depth assessment and treatment

In clinic: Assessment of cognitive functioning and psychological disorders, brief interventions for behavioral medicine issues (adherence, sleep, weight, pain, etc.), depression, anxiety, family/caregiving issues, and dementia-related behavioral problems. Consultation with other disciplines, psychology education of staff and trainees, and participation in the management of team dynamics.

Outside of clinic: Individual psychotherapy for Veteran or caregiver; couple or family therapies; coaching Veterans to use mobile apps to meet mental health and wellbeing goals (Geri-Mobile Health Project); capacity assessments; partake in other educational and clinical demonstration projects/quality improvement projects; lead didactics.

Research opportunities: Dr. Gould conducts research on using technology to deliver treatments to older adults with anxiety and depression. Interested interns may work with Dr. Gould on her ongoing research studies for part of the rotation as well.

Intern's role in the setting: Essentially the same as the Staff Psychologist. There is some opportunity for research with Dr. Gould or working on quality improvement projects as well as giving clinical/educational presentations.

Amount/type of supervision: Live supervision of new skills, 1-2 hour(s) individual supervision. Group supervision provided if multiple trainees and usually done as part of team clinic. Informal supervision involving working side-by-side on cases with the staff psychologist, particularly in the clinical setting. Level of autonomy is individually negotiated according to training goals.

Didactics: Attendance is required at the GRECC weekly Tuesday seminar (3-4pm). Seminars cover topics in geriatric medicine and interdisciplinary topics in geriatrics. There are optional weekly seminars from 2-3 which are often more medically oriented but all interdisciplinary team trainees are welcome. Monthly

Journal Club seminars are also available and psychology interns and fellows are encouraged to participate. Informal teaching from every discipline. Assigned readings.

Pace: Varied, depending upon the needs of the patients. Frequently fast and demanding in clinic, with plenty of time for writing reports and notes on other days. Progress notes should be drafted within a day of patient contact. Assessment reports should be written within a week of completing the exam. Workload can be managed within the allotted time.

Use of Digital Mental Health tools: Use of VA apps to help Veterans meet mental health and wellbeing goals (Geri-Mobile Health), research study on Meru Health mobile app for depression, research study on video-delivered anxiety intervention, program evaluation of tele-geropsychiatry consultation program. During COVID-19, there have been opportunities for service delivery through telehealth. Many of the primary care clinic appointments are conducted by telephone or audio-visual conference; the entire interdisciplinary team meets together with the Veteran and caregiver, as appropriate, utilizing the telehealth modality. This allows for continuity of care and observation/learning across disciplines. In the context of COVID-19, individual therapy is also offered via telephone and audio-visual conferencing modalities.

Pikes Peak Competencies: The psychology intern will have opportunities to see patients with medically, psychosocially, mentally and emotionally complex issues in an interdisciplinary team setting. The trainees will gain knowledge and skills in using culturally and individually appropriate assessments and interventions that consider the bio-psycho-social and environmental factors that may impact the health and well-being of older adults. Particular emphasis will be placed on team-based approaches, modifying evidence based interventions to accommodate chronic and acute medical problems, cognitive abilities, and late life developmental issues, and learning appropriate ways to partner and consult with families, team members, and other health care professionals. At the beginning of the rotation, trainees will be expected to review the Pikes Peak Evaluation Tool to highlight specific training goals for this rotation.

This is a primary medical care program run by the Geriatric Research Education and Clinical Center ([GRECC](#)). Interns work in close collaboration with the interdisciplinary team. Trainees provide individual, brief and long-term psychotherapies (including cognitive behavioral therapy, acceptance and commitment therapy, problem solving therapy, and reminiscence therapy), family therapy, behavioral medicine interventions, cognitive and mental health assessments/screenings and focused neuropsychological assessment. Many of the patients in the clinic have some level of cognitive impairment and many are diagnosed with dementia. Therefore, it is likely that the intern will work with patients with these impairments and/or with their caregivers to assist with coping and stress. We also provide coping techniques for a variety of medical conditions and work closely with the team to help improve patients' adherence with treatments offered by social work, nursing, and medicine.

Clinic hours for GRECC Geriatric Primary Care Clinic are Mondays from 1:00 pm to 4:00 pm and Tuesdays from 8:00 a.m. to 1:00 p.m. Further psychological interventions and assessment are done at times convenient to the intern. This clinic has trainees from all of the above disciplines, which affords an excellent opportunity to learn from and teach across disciplinary boundaries. There are opportunities to observe assessments and interventions by all disciplines and to be observed directly.

Geropsychiatry Community Living Center (GCLC, Building 360, MPD)**Supervisor: James Mazzone, Ph.D.**

Patient population: The Geropsychiatry Community Living Center encompasses 5 wards in the same building (A – Secure Dementia or Probate Conserved Ward; B – Locked Psychiatric or LPS Conserved Ward; D & E – Mixed Medical Psych Open Wards; and F – Palliative Care & Smoking Ward). Residents have serious medical problems and:

- dementia or cognitive impairment
- long-standing psychotic-spectrum disorders
- less severe psychiatric problems, e.g., substance abuse, PTSD, depression
- behavioral problems

Psychology's role: The psychologist acts as a clinician and consultant to the interdisciplinary team, including:

- Evaluation and management of behavioral problems
- Neuropsychological screening, including assessment of capacity and conservability
- Individual and family psychotherapy on a limited basis
- Technology supported psychological services
- Providing a psychological perspective at interdisciplinary care meetings and nursing reports

Other professionals & trainees: Nurses, geriatricians, psychiatrists, social workers, RNPs, recreation therapists, occupational therapists, physical therapists, pharmacologist, dietician, and trainees in recreation therapy, occupational therapy, psychiatry, and nursing.

Nature of clinical services delivered: Cognitive and capacity evaluations, behavioral assessment and management, psychotherapy, and technology supported psychological services are the primary activities, along with those listed above.

COVID-19 Risk Mitigation: During the pandemic, everyone entering the VA campus is screened for symptoms of COVID-19. Entrance to our building is restricted to staff, trainees and patients who reside in the building. No family or other visitors are currently admitted to the building and everyone is screened again, plus has their temperature taken at the building entrance. Attempts are made to maintain physical distancing when possible (i.e. > six feet apart). Trainees will be expected to follow hand hygiene and infection control protocols. Masks are required for everyone in the building. Face shields are also required for encounters when seeing patients. Additional precautions are taken around COVID-19 testing. Prior to starting the rotation, trainees will need to test negative before coming to the building and participate in episodic testing when requested. Given the COVID-19 pandemic is evolving, mitigation strategies may get adjusted as needed.

Intern's role: The rotation focuses on learning to provide a wide range of mental health services on a multidisciplinary team treating older adults with dementia, long- standing psychotic-spectrum disorders, and various medical problems. Direct clinical activities involve: facilitating evaluation & management of behavioral problems elicited by clients; conducting neuropsychological screening focused on decision making capacity & conservability; psychotherapy and technology enhanced care. Additional activities include meetings, staff education, and training.

Amount/type of supervision:

- 1 hour of weekly face-to-face supervision
- Informal supervision involving working side-by-side on cases with the staff psychologist
- Psychologist may have the intern do an audio recording of at least one therapy session.

Didactics: Opportunity to participate in educational programs offered to Extended Care Service staff.

Pace:

- Varied, depending upon the needs of the residents. Over course of rotation will be expected to follow residents for ongoing behavioral management and intervention in conjunction with episodic consultation assessment referrals. Although workload will fluctuate it can be managed within the allotted time.

- Attend applicable interdisciplinary care meetings.

Use of Digital Mental Health tools: Assistive technology services are routinely used in this rotation to extend traditional psychology interventions. Trainees will learn about Individualized Non-pharmacological Services Integrating Geriatric Health & Technology (**INSIGHT**), a technology integration model. INSIGHT evolved out of process improvement and program development activities in the GCLC. The INSIGHT process has been officially recognized as a national promising practice by the VA's National Office of Mental Health and Suicide Prevention (OMHSP). Through this model trainees will learn about how to add various technologies within the environment of care, how to use various technologies, & how outcomes or successes are being monitored. Trainees will also have an opportunity to participate in ongoing process improvement and program development activities in this area.

Pikes Peak Competencies: The psychology trainee will gain exposure to a population with complex medical, mental, and cognitive concerns. The trainee will learn to incorporate unique cultural factors such as military experience and combat exposure to evaluate, assess, and treat a geriatric population with a significant pathology. The trainee will be expected to work within an multidisciplinary team to serve the Biological, Psychological, and Social needs of the patient. The trainee will use formal and incidental assessment to guide treatment recommendations and interventions. Lastly, the trainee will learn to adapt and augment services to promote dignity, quality of life, and positive well-being.

Psychology evaluation and interventions at the 360 CLC are drawn from cognitive-behavioral spectrum approaches. For patients with behavioral problems and cognitive ability, behavioral contracts are frequently used. In addressing behavioral problems, the psychologist usually evaluates the patient; proposes to the interdisciplinary team a plan for assessment and intervention; revises the plan based on feedback; helps the team to communicate the plan to the patient and to other staff; and evaluates the results on an ongoing basis.

Examples of clinical problems for which psychology has been consulted:

- Verbal and physical abuse of staff or anger outbursts during care
- Non-compliance with prescribed or recommended care
- Assessing for delirium versus dementia in an elderly female patient with recent hip fracture and hip surgery.
- Capacity evaluation of a severely ill patient who demanded to discharge immediately "against medical advice"
- Providing family psychotherapy to a quadriplegic patient and her daughter, who were having heated conflicts during visits.
- Adjustment issues for a patient recently diagnosed with advanced cancer
- Hoarding behavior

A highlight of working at the Geropsychiatric CLC is the privilege of working with a highly skilled multidisciplinary team as it struggles to assess and treat a very complex and challenging group of patients. In this context interns benefit from hearing the enriching perspectives of other disciplines, while seeking to integrate their own psychological perspective into the team's decision-making process.

Date: 8/27/20

Home Based Primary Care Program (MB3 PAD and San Jose Clinic)

Supervisors: Elaine S. McMillan, Ph.D.

Jennifer Ho, Psy.D.

Patient population: The HBPC program serves primarily older Veterans (over the age of 65) with multiple chronic medical conditions and their caregivers/families.

Psychology's role: Direct service to patients and families; consultation with the HBPC interdisciplinary team and other hospital providers as needed; member of the interdisciplinary team.

Other professionals: An interprofessional team including medicine, occupational therapy, nursing, nutrition services, pharmacy, and social work. Interns, residents, & fellows from all disciplines may participate.

Clinical services: Home-based interview assessments; cognitive screenings and capacity evaluations; brief individual & family therapy for a variety of emotional disorders; caregiver support and psychoeducation; interventions for pain and weight management, smoking cessation, and adherence to medical regimens; palliative care psychology, staff consultation.

Intern's role: Serves as the team psychologist.

Supervision: 1-2 hours individual supervision per week. Observation during team meetings and occasional observation during patient meetings. Audiotape review of patient therapy sessions, when taping is feasible. Theoretical orientation emphasizes social learning, relational, and cognitive behavioral perspectives within a brief treatment model.

Didactics: Short in-services provided to team during team meetings. Trainees provide one in-service to team during the rotation.

Pace: 4-5 home visits to patients per week. Brief progress note for each visit. One morning-long team meeting. About 1-2 hours of follow-up contact with staff, patient's families, other providers, etc.

Use of Digital Mental Health tools: Mindfulness Coach, PTSD Coach, CBT-I app; Pacifica. Opportunities to provide psychotherapeutic interventions using HIPAA compliant telehealth platforms (WebEx, Zoom.gov, Virtual Video Connect, and VANTS line) will be offered.

Pikes Peak Competencies: Many of the Pikes Peak Core Competencies will be addressed during this rotation. Interns will receive training in the following areas: cognitive psychology and change using standardized testing measures to differentiate between normal age related cognitive changes and cognitive impairment; Social/psychological aspects of aging (for example, changing roles, coping with losses in function, bereavement of loved one, friends, social status, and options to foster emotional well-being); Biological aspects of aging, including training in specific considerations for interventions for older adults (e.g., pharmacological issues, sensory losses, specific disease presentations, physical decline, etc.); Psychopathology issues relevant to aging; Problems in daily living and the identification of environmental adaptations and accommodations to facilitate maintenance of, or increased, independence; Sociocultural and socioeconomic factors with training opportunities that highlight the heterogeneity of the racial, ethnic, and socioeconomic factors of the Veterans served; Assessment of older adults including assessment of decision making capacity, treatment, prevention and crisis intervention; Consultation, providing opportunities to interface with other disciplines, including interactions with both community based providers and other disciplines within VA. Interns will also gain an increased understanding of the special ethical issues that can often arise (i.e., balancing autonomy and safety).

The Home Based Primary Care (HBPC) program provides in-home primary medical care and psychosocial services for Veterans whose chronic medical conditions have made it difficult or impossible for them to access the outpatient clinics for the medical care they need. The HBPC program has three interdisciplinary teams that include a physician, nurse practitioners, occupational therapist, social worker, pharmacist, dietician, and psychologist. Trainees tend to work with only one team. A wide variety of psychological services are provided to HBPC clients by Psychology Trainees. These services include:

- Psychological assessments of patients and caregivers.

- Cognitive screenings and Capacity evaluations
- Individual and caregiver/family interventions for depression, anxiety, caregiver stress, end of life concerns and other forms of emotional distress.
- Training in behavioral medicine interventions, e.g., behavioral sleep management, pain management, weight management, and smoking cessation techniques.
- Consultation with other program staff about methods of enhancing patient adherence to treatment regimens.

Supervision includes 1-2 hours of individual supervision per week and observations during team meetings. Joint clinical visits are made during orientation and upon request of the trainee. Theoretical orientations include cognitive-behavioral theory and relational therapy with an emphasis on shorter-term treatment for individuals and couples. Training and supervision about health care team dynamics is included as part of supervision.

**Hospice and Palliative Care Center/Sub-Acute Medicine Unit
(Building 100, 4C, PAD)
Supervisor: Kimberly E. Hiroto, Ph.D.**

Patient population: The VA Hospice and Palliative Care Center is a 25-bed inpatient unit consisting of two wings: one wing (13 beds) serves patients needing hospice care and the other wing (12 beds) serves patients receiving subacute medical care and rehabilitation. Patients on both wings are admitted for various lengths of stays ranging from short-term to end-of-life care. The average length of stay usually ranges between 1-3months, but some patients have stayed with us for over 1yr; duration often depends on their medical needs and illness status along with their functioning and psychosocial situation (e.g., housing, availability of caregivers). Our hospice patient population includes those living with chronic or acute serious, life-limiting illness usually with 6-months or less time remaining (see below for a description of palliative and hospice care). Common medical for patients receiving hospice care includes metastatic cancer, advanced heart failure, chronic lung diseases, end-stage organ failure, neurocognitive disorders and progressive neurological diseases (e.g., ALS). Those receiving rehabilitation are often recovering from amputations and/or undergoing treatment (e.g., chemotherapy, dialysis). While these patients are often not yet eligible for hospice care, they often have chronic and/or life-limiting illnesses and frequently discharge home or to another residential setting (e.g., skilled nursing home) depending on their functional and medical needs. On several occasions our subacute medical patients discharge with home hospice or move over to our hospice wing. Within our unit, patient demographics vary significantly by sociodemographic characteristics, disease states, mental health diagnoses, military era, and life experience. Patients must test negative for COVID-19 before being admitted to our inpatient unit. Since the pandemic, family members and friends are able to visit but only under strict conditions, which depends on multiple factors (e.g., their own health, the patient's status). While general visitation rules exist, decisions are made on a case-by-case basis depending on each patient's and family's situation.

Psychology's role: Direct clinical service, consultation, interdisciplinary team participation, staff support.

Other professionals and trainees: Our interprofessional team consists of psychology, medicine, nursing, social work, occupational and physical therapy, massage therapy, chaplaincy, recreation therapy, pharmacy, and dietary services . Palliative medicine fellows rotate throughout the year as part of the Interprofessional Palliative Care Fellowship. We frequently have residents and fellows from other

specialties rotate through as well (hematology/oncology, psychosomatic medicine, geriatrics, pharmacy, occupational therapy).

Nature of clinical services delivered: Cognitive and mood assessments; psychotherapy with patients and emotional support to their families, opportunities for grief therapy; multiple theoretical orientations (cognitive-behavioral, existential, family systems) and clinical interventions used (problem-solving therapy, motivational interviewing, dignity/meaning-centered therapy); interprofessional consultation and psychoeducation.

Intern's role: Direct clinical service provider, consultant, interdisciplinary team member, liaison with other services; potential involvement in program development.

Supervision: At least one hour of individual supervision per week with additional supervision received as often as needed. One hour group supervision per week. Observation during team meetings and occasional observation during joint therapy sessions.

Didactics: Weekly group supervision; Monthly Interprofessional Hospice and Palliative Care didactics (optional for interns dependent on their schedule); daily interdisciplinary treatment team meetings with informal education offered; opportunities to participate in additional educational events (e.g. Palliative Care Journal Club; relevant Geropsychology/Neuropsychology seminar topics; relevant webinars).

Pace: 4-6 contacts a week (patients and families). Progress notes for each contact.

Use of Digital Mental Health tools: None at this time.

Pikes Peak Competencies: The intern will gain exposure and experience working with medically frail older adults living with advanced illness and their families. Working within an interprofessional team, interns will learn about the physical, cognitive, emotional, spiritual and existential aspects of living and dying with advanced illness and the unique ways military and Veteran cultures can affect patients' experiences. Interns will learn to assess for mental health symptoms in the presence of chronic, life-limiting, and terminal illness, develop case conceptualizations that integrate the bio-psycho-social-spiritual aspects of each person's life, and provide clinical interventions appropriate to each patient's/family's individual and cultural needs. Interns will also participate in interprofessional team meetings and gain experience providing consultation and communicating psychological concepts to other disciplines. Particular emphasis is placed on self-reflective practice, professional development, ethical/legal issues, social justice and cultural diversity given the nature of this work and the population.

"The Hospice and Palliative Care rotation was one of my first internship rotations and definitely the most memorable. The training experience was dynamic and invigorating, as I grew professionally, clinically, and personally. I continue to apply the lessons learned from the rotation to my current work. The clinical team provides a rich learning environment and the opportunity to work with Veterans at the end stage of life is a great honor." ~Recent intern

'Palliative care' is an umbrella term that includes but is not limited to hospice care. Palliative Care focuses on comfort and is provided at any point in the illness trajectory to alleviate physical and psycho-social-spiritual suffering, enhance quality of life, effectively manage symptoms, and offer comprehensive, interdisciplinary support to the patient and family. This type of care is offered throughout the illness course regardless of disease status. Hospice care is a type of palliative care offered to those with a terminal diagnosis during the last six months of life who choose to focus on comfort and forgo disease-directed curative treatment. This philosophy of care focuses on alleviating symptoms and maximizing quality of life. While the goal of hospice is not to cure an illness, it does aim to facilitate healing. In addition to meticulous symptom management and attention to easing signs of physical, psychosocial, spiritual, and existential suffering, hospice care also includes maximizing a

person's total comfort, facilitating their adjustment to end-of-life, processing through anticipatory grief, and helping patients find meaning in their life and their death.

The psychology intern works collaboratively with other professionals in assessing the patients and their support network, prioritizing problems, and defining and implementing psychological interventions. Psychological issues addressed include pain and symptom management, psychiatric problems (e.g. depression, anxiety, PTSD, serious mental illness), adjustment to chronic/acute illness and/or acquired disability, end-of-life, grief reactions, existential and spiritual distress, questions of meaning, guilt, interpersonal problems, communication difficulties, crisis management and legal and ethical issues (e.g. abuse, physician aid-in-dying). However, psychological issues addressed also include a sense of well-being, spiritual comfort, forgiveness, gratitude and post-traumatic growth. The intern will learn how to modify therapy in this non-traditional setting, with a strong focus on case conceptualization, cultural humility, documentation, and honing one's clinical ear to listen for underlying signs of distress as well as resilience and hope. Additionally, by helping our Veterans and their families find meaning in life, illness, and death, interns will hopefully examine the meaning of their own lives and develop an even deeper appreciation for the humanity of others, and themselves.

"I had several profound experiences [on this rotation] that have impacted both my professional and personal views. I learned a lot about the subtle and vital interventions I can provide in a therapy session. Personally, I am more mindful of how I spent my time and my relationships with family and friends." ~Recent intern

Neuropsychology Training

Overview: Clinical Neuropsychology Internship Track Training

Clinical Neuropsychology Internship training is offered as an emphasis area program. The following sites are primary training locations for Clinical Neuropsychology:

- Memory Clinic (Lisa Kinoshita, Ph.D.)
- Neuropsychological Assessment and Intervention Clinic (John Wager, Ph.D.)
- Psychological Assessment Unit (James Moses, Jr., Ph.D., ABPP-CN)
- Polytrauma Network Site, Palo Alto Division (Kristina Agbayani, Ph.D., ABPP-CN)
- Polytrauma Rehabilitation Center/Comprehensive Rehabilitation Center (Alexandra (Sasha) Jouk, Ph.D., Tiffanie Sim Wong, Ph.D., ABPP-RP)
- Polytrauma Transitional Rehabilitation Program (Jennifer Loughlin, Ph.D.)
- Inpatient Spinal Cord Injury Unit (Daniel Koehler, Psy.D.)
- Outpatient Spinal Cord Injury Clinic (Jon Rose, Ph.D.)

In addition, a few interns in recent years have chosen outpatient neuropsychology training experiences at the San Jose and Livermore Clinic sites (not described in this brochure and can be discussed with the Director of Training):

- Neuropsychological Assessment Clinic – San Jose Outpatient Clinic (Kacey Marton, Ph.D.)
- Polytrauma Network Site – Livermore Division (Joelle Broffman, Psy.D.)

All eight primary neuropsychology rotations are described below. Neuropsychology training experiences also occur in other sites, such as the Behavioral Medicine service and some inpatient psychiatric wards; they can sometimes be arranged in other settings as well. For interns in the Neuropsychology track, two of their 4 primary rotations will be selected among the above sites. The other 2 training rotations can be selected from other clinical areas according to training needs and interests. *Interns in any track may choose to train in any of the rotations described below;* however, interns in the Neuropsychology track have preference in the assignment of these rotations.

Training Goals

The training goals for the Clinical Neuropsychology Internship track are:

A. Diagnosis

- Exposure to neuroanatomy, neurophysiology overview, brain cuttings (neuropathology), neurology/neuroradiology and grand rounds as time permits.
- Exposure to major diagnostic test batteries
- Experience in at least one major diagnostic method that is thorough --model to be provided and taught by appropriate supervisor.
- Administer, score, interpret, and develop reports based on results of testing.
- Utilize computer-assisted administration and scoring of certain measures (e.g. Category Test, Wisconsin Card Sorting Test, continuous performance tests) as well as data analysis to expedite interpretation of assessment data.
- Work with a variety of patient groups, including (primarily) brain injury and stroke, but also such conditions as intracranial tumor, anoxia/hypoxia, nervous system infections, multiple sclerosis, neurodegenerative diseases, and various psychiatric disorders.
- Prepare comprehensive reports that are timely, accurate and clinically useful. Practice in communicating report data to patients, interdisciplinary staff, family members, and outside agencies in a timely manner.
- Present case material to peers in a series of case conferences within the medical center.

- Expand knowledge/experience with severe psychopathology and associated cognitive deficits
- Mastery of Wechsler scales (WAIS & WMS) for differential diagnosis, syndrome analysis.
- Mastery of personality assessment scales and profile interpretation.
- Exposure to projective tests in certain rotations (i.e., Psychological Assessment Unit), if desired.

B. Rehabilitation/ Intervention

- Familiarity with principles of cognitive remediation, methods, applicability, limitations and CARF standards.
- Theoretical background for Cognitive Retraining (CR), pros and cons, research base.
- Determination of candidacy/suitability for CR.
- Use of assessment for short, intermediate and long-term planning.
- Use of neuropsychological assessment data in the development of problems lists and treatment plans.
- Establishing treatment goals and determining progress/outcome of treatment.
- Neuropsychological consultation with medical and unit staff who provide rehabilitative care.
- Provision of psychoeducation to patients, family and staff concerning a variety of neuropathological conditions.
- Provision of assessment feedback to patients and families to begin the process of awareness and /or acceptance of cognitive/psychosocial strengths and weaknesses.
- Individual and group psychotherapy with neurologically impaired patients focusing on adjustment to physical/cognitive disability and a lower level of functional independence.
- Individual counseling/psychotherapy with cognitively impaired patients presenting with depression, anxiety, low self-esteem, impulsivity, sexual dysfunction, pain, sleep difficulties, behavioral noncompliance, etc.
- Couples counseling with patient and partner in conjunction with family therapist.
- Family therapy with patient and immediate family in conjunction with family therapist
- Case management-providing a neuropsychologically integrative viewpoint of patients for both staff and families.
- How to present neuropsychological information, education and in-services to non-neuropsychological professional audiences.
- Longitudinal exposure to patients on whom tests are available, to build up a personal reference base of:
 - The natural history of recovery from brain injury.
 - Benefits of and issues associated with repeated neuropsychological assessment over time
 - Neuropsychological test scores and functional behavioral capabilities and change over time
- Exposure to working on an interdisciplinary team
- Involvement in program development within programs.
- Understanding of program milieu from systems perspective, including roles of other disciplines.

Neuropsychology Didactics

The Neuropsychology Seminar meets on the fourth Thursday of each month from 3:00-4:00 pm, and the Neuropsychology Journal Club meets on the second Thursday of each month, from 3:00-4:30pm in tandem with the Geropsychology seminar. The first seminar starts during the last week of September and ends the last week of July. This seminar and Journal Club are **required** for neuropsychology interns and optional for other interested interns depending on supervisors' approval. Each month the seminar will typically include a presentation from invited VA or non-VA speakers addressing a range of clinical syndromes, while the Journal Club will include a discussion of relevant research articles, case presentations, and preparation for the Board Certification in Clinical Neuropsychology.

The seminar will address a wide range of topics in neuropsychology, as well as many topics which such as dementia, traumatic brain injuries, strokes, cognitive rehabilitation, and psychopathology. Neuropsychology-focused topics may include the basics of brain organization and assessment, differential

diagnoses of cognitive impairment and dementia, neurological syndromes (e.g., aphasia, neglect), neuroimaging, neurological exams, assessment and therapy challenges in outpatient, inpatient and long-term care settings, assessment and treatment of psychopathology across the lifespan, working with interdisciplinary teams, evaluation of mental capacity, and psychotherapy with caregivers and cognitively impaired patients. The seminar coordinator, Jennifer Loughlin, Ph.D., will send out schedules for the seminar throughout the year.

For neuropsychology interns only, there are optional educational experiences available which meet requirements for Board Certification in Clinical Neuropsychology. Interns can participate in Stanford Grand Rounds via video teleconferencing or view videorecorded sessions:

- 1) Stanford Neurosurgery Grand Rounds every Friday from 7:00-8:00am at Stanford Li Ka Shing Center, Room LK130.
- 2) Stanford Neurology Grand Rounds every Friday from 8:00-9:00am at Stanford Li Ka Shing Center, Room LK130. See the current schedule of presentations at: <http://med.stanford.edu/neurology/education/grandRounds.html>.
- 3) Brain cutting sessions every other Friday in PAD Bldg. 100 from 10-11:30am with a neuropathologist. This experience can be arranged on an individual basis by Lisa Kinoshita, Ph.D., in conjunction with Dr. Sobel, Neuropathologist.
- 4) Neuropsychology Multi-Site Didactic every Monday from 9am-11am at the PM&R conference room in building 7 in conjunction with several other VA sites through video teleconferencing. The seminar will consist of an hour of case conference and one hour of a reading seminar focused on a variety of topics and will be in a panel discussion format.

Memory Clinic (Building 6, PAD)

Supervisor: Lisa M. Kinoshita, Ph.D.

See description in the Geriatric Neuropsychology section.

Neuropsychological Assessment and Intervention Clinic (Building 6, PAD)

Supervisor: John Wager, Ph.D.

Patient population: Medical patients, with an emphasis on serving veterans aged 18 to 65, with neurological impairments, sometimes with psychiatric co-morbidities, usually PTSD, or depression. Most patients are neurologically impaired: traumatic brain injury, tumor, anoxic injury, learning disabilities, or have suspected cognitive decline of unknown origin. Some are multiply diagnosed with medical and psychiatric problems. Diagnosis often is uncertain at time of referral. The patient population is diagnostically and demographically diverse, and is living in the community. About 20% are women.

Psychology's role: We serve as diagnostic and treatment consultants to interdisciplinary staff throughout the medical center, and provide psychoeducation, cognitive retraining and individual psychotherapy (CRATER Therapy) to patients with neurological impairments and their families.

Other professionals and trainees: Neuropsychology practicum students, Psychology interns and Psychology postdoctoral fellows.

Nature of clinical services delivered: We evaluate patients' cognitive and mental status, strengths and deficits, to make differential diagnoses between neurologic and psychiatric components of cognitive deficit or psychiatric disorder, and to make recommendations for management and treatment. Interns are

expected to treat some of the patients, as well as their families in individual therapy with a focus on cognitive remediation, after the initial assessment. Cognitive deficits treated include difficulties with memory, attention, spatial abilities, speed of information processing, ability to multitask, impose order on the environment, or be socially appropriate. C.R.A.T.E.R. Therapy is taught for the treatment of patients with neurological impairment.

Intern's role: Interns take primary responsibility for diagnostic evaluation of cases from referrals made to the clinic. They select, administer, score, and interpret a battery of tests that is appropriate to address the referral question. Reports are written for the referring clinician based on the test results, the history, and interview data with patients and sometimes, their family members. Feedback is given to patients and/or their families. Some patients are seen for cognitive retraining, individual and family psychotherapy, and/or training in software and prosthetic electronic devices. Interns also have an opportunity to supervise practicum students.

Amount and type of supervision: Individual supervision is provided on a weekly basis, drop-in consultation is encouraged. Group supervision over cognitive retraining/psychotherapy is given for 1 hour per week. Interns are expected to give presentations twice during the rotation, at the didactic portion of group supervision.

Didactics: There is a 2 hour required didactic and group supervision held weekly in the clinic. Attendance at Grand Rounds in psychiatry, neurology and/or neurosurgery is encouraged.

Pace: Interns typically evaluate, 1 case a week. Time to test a patient and do the write-up optimally would be 7 days, but more time may be required for complex cases. Preliminary feedback reports to the referral source are standard. Rate of writing is adjusted to optimize the quality of the analysis and to conform to the experience level of the Intern. Providing patients and referral sources with treatment recommendations is emphasized. Interns are expected to provide up to 2 hours per week of psychotherapy with neurologically impaired individuals or individuals and their family members.

Use of Digital Mental Health tools: 1) Training in frontal lobe/memory prosthetic software (PEAT) within CRATER therapy; 2) Use of telehealth as well as iPad CRT for CRATER therapy to increase accessibility to care.

This rotation is appropriate for interns interested in specialties in neuropsychology, rehabilitation, medically-based populations (behavioral medicine), or geriatrics. The neuropsychology focus is on both assessment and neuropsychologically-informed treatment, the rehabilitation aspect is the focus on disability and functional improvement, and the geriatric focus is on diagnosis of Mild Cognitive Impairment or early diagnosis of Dementia as well as interventions to allow patients to age-in-place. A research opportunity is also available on the outcome/efficacy measures of psychotherapy and cognitive remediation with patients with neurological impairment.

Date: 8/19/2020

Polytrauma Network Site (Building 7, PAD)
Supervisors: Kristina Agbayani, Ph.D., ABPP-CN
Joelle Broffman, Psy.D.

Rotation Description and Patient Population: The Polytrauma Network Site (PNS) training rotation in Palo Alto Division is an interdisciplinary outpatient acquired brain injury evaluation and treatment clinic. The patient population primarily includes Veterans with a history of traumatic brain injury (approximately 80% mild TBI) or stroke, often with comorbid psychiatric conditions (e.g., PTSD, depression) and comorbid medical conditions (e.g., chronic pain, migraines, insomnia)..

Psychology's Role in the Setting: Provide neuropsychological and psychological screening and/or comprehensive assessment, individual psychotherapy and/or cognitive rehabilitation, patient and family education, and interdisciplinary team consultation. The psychologist functions on a large interdisciplinary team of physicians, PTs, OTs, RTs, Vision Specialists, Social Workers, Case Managers, and other providers.

Other Professionals and Trainees in the Setting: PNS is comprised of a physiatrist, neuropsychologist, speech pathologist, physical therapist, occupational therapist, recreational therapist, vision rehabilitation specialist, nurse case manager, and social work case managers.

Nature of Clinical Services Delivered: Brief and comprehensive neuropsychological assessment, providing feedback to Veterans and family members on neuropsychological assessments (including psychoeducation on the role of non-neurological contributions to cognitive difficulties). Working closely with the treatment team during comprehensive TBI evaluations (CTBIEs) to determine when a referral to neuropsychology is appropriate. Individual, time-limited psychotherapy and cognitive rehabilitation.

Intern's Role in the Setting: Competencies to be developed will include medical chart review and use of the VA's computerized patient record system (CPRS); learning of clinical interviewing skills appropriate for neuropsychological and mental health intake evaluations; administration, scoring, and interpretation of neuropsychological assessment procedures (especially as they relate to the assessment of mild TBI); administration, scoring, and interpretation of assessment procedures for mood disorders; clinical neuropsychological report writing; and clinical management and treatment of patients with comorbid mild TBI and mood disorders. Assessment will focus on neuropsychological testing procedures (administration, scoring, and interpretation) appropriate for mild TBI/concussion, clinical interviewing, neuropsychological report writing, with the possibility of psychotherapeutic interventions for TBI and mood disorders.

Amount/Type of Supervision: At least two hours of individual supervision per week. Co-treatment, shadowing, and observation during team meetings.

Rotation-Specific Meetings and Trainings: Tuesday morning interdisciplinary team meetings, monthly all-staff meetings

Pace: A moderate to rapid pace is to be expected.

Use of Digital Mental Health tools: Interns have the opportunity to conduct clinical interviews feedback sessions, and therapeutic interventions via video through VA Video Connect.

Competencies Met on this Rotation: a) neuropsychological and psychological assessment, b) intervention, c) consultation and interprofessional skills, c) scholarly inquiry and research, d) organization, management, program development, and program evaluation, e) professional issues/development, f) ethical, and legal issues, and g) cultural and individual diversity

**Polytrauma Rehabilitation Center/Comprehensive Rehabilitation Center
(Building 7, PAD)**

Supervisors: Tiffanie Sim Wong, Ph.D., ABPP-RP
Elisabeth McKenna, Ph.D.
Alexandra (Sasha) Jouk, Ph.D.

Rotation Description and Patient Population: The PRC/CRC is an 18-24 bed acute, inpatient rehabilitation unit within the Polytrauma System of Care (PSC). The PRC/CRC is one of 5 facilities in the country designed to provide intensive rehabilitative care to Veterans and Active Duty Service Members who experienced severe injuries to more than one organ system, including all levels of severity of TBI (mild, moderate, severe, disorders of consciousness). Other neurological and physical injuries include stroke, anoxia/hypoxia, brain tumors, encephalitis, cardiac conditions, amputations, orthopedic injuries, or general medical deconditioning. Approximately 80% of patients are male ranging in age from 18-90s. The average length of stay is typically 4-8 weeks with variation depending upon severity and acuity of injury and patient-centered care.

Psychology's role in the setting: Provide neuropsychological and psychological screening and comprehensive assessment, cognitive rehabilitation (with retraining and compensatory approaches), individual psychotherapy, patient and family education and training, and interdisciplinary team co-treatments and consultation. Develop and provide ongoing staff trainings and education. Provide training, mentorship, and supervision of junior colleagues when possible. Conduct applied research and program evaluation. Brief couples/family interventions involving support and education. Consultation/training to other providers.

Other professionals and trainees in the setting: Inter-professional team consisting of medicine, nursing, physical therapy, occupational therapy, speech pathology, rehabilitation neuropsychology, family therapy, recreational therapy, social work, vision therapy, optometry, audiology, military liaisons, and other disciplines. Other Psychology trainees (i.e., interns, fellows) may also be rotating in the setting.

Nature of clinical services delivered: Neuropsychological assessment, capacity assessment, cognitive rehabilitation, psychotherapeutic and behavioral interventions with individuals around coping with injury/disability, behavioral management, acute stress reactions/PTSD, substance use disorders, and/or other comorbidities, and treatment and discharge planning. Brief couples/family interventions include psychoeducation and support for adjustment to disability, and consultation/training to other providers.

Intern's role in the setting: Direct clinical service provider (assessment and intervention); consultant, interdisciplinary team member, and liaison to other services. In addition, the intern is expected to teach or provide training to members of other disciplines, direct a scholarly project or participate in research, or participate in program evaluation that informs clinical practice.

Amount/type of supervision: At least two hours of structured individual supervision per week and additional individual/group supervision. Co-treatment, shadowing, observation during team meetings and consultation on research. Theoretical orientation combines neuro-rehabilitation psychology with cognitive-behavioral, psychoeducational, interpersonal, and systems approaches.

Rotation-Specific Meetings and Trainings: Monday morning huddle (8:30AM-9:00AM), Tuesday and Thursday morning interdisciplinary team meetings (8:00AM-9:00AM) with possible carry-over meetings Fridays (8:00AM-9:00AM), monthly all-staff meetings (noon), monthly unit-based meetings (8:00AM), ongoing family meetings and team meetings, Psychology-specific group supervision with Dr. Sim, Dr. Jouk, and/or Dr. McKenna.

Pace: Rapid pace with background in Neuropsychological assessment/Rehabilitation expected

Use of Digital Mental Health tools: iPad use for cognitive screening and/or rehabilitation

COVID-19 Pandemic Precautions: Required masking of all staff, patients, and visitors. One mask issued per day per staff member. Increased hand hygiene and disinfection of surfaces, including neuropsychological test materials. Plexi-glass barrier available for testing. Tele-communications for formal team meetings.

Competencies Met on this Rotation: a) neuropsychological and psychological assessment, b) intervention, c) consultation and interprofessional skills, d) science-practice integration, e) professional values, attitudes, and behaviors, f) ethical and legal standards, g) individual and cultural diversity, h) communication and interpersonal skills, and i) supervision.

The VA Palo Alto Health Care System houses the Polytrauma System of Care, with Palo Alto being one of five comprehensive facilities in the country designed to provide intensive rehabilitative care to Veterans and service members with polytrauma (i.e., those who have experienced severe injuries to more than one organ system, including the central nervous system). The four main programs under this Polytrauma System of Care umbrella at VA PAHCS are: (1) the Polytrauma Rehabilitation Center/Comprehensive Rehabilitation Center (PRC/CRC, housed in 7D, which provides acute and sub-acute in-patient care); (2) the Polytrauma Transitional Rehabilitation Program (PTRP, residential/milieu-based treatment); (3) the Polytrauma Network Site (PNS, which provides outpatient treatment); and (4) the OIF/OEF program (primarily providing case management and outreach). Of note, the Polytrauma System of Care is scheduled to move into a new, state-of-the-art facility on the Palo Alto campus by the spring of 2020.

The Palo Alto Polytrauma Rehabilitation Center/Comprehensive Rehabilitation Center (PRC/CRC) is an 18-24 bed Rehabilitation Medicine Service, CARF-accredited inpatient unit designated as a TBI Model Systems Center. This unit provides acute care to patients with polytrauma resulting in physical, cognitive, psychological, or psychosocial impairments and functional disability. Some examples of polytrauma include traumatic brain injury (TBI), hearing loss, fractures, burns, amputations, and visual impairment. Patients may also present with disorders of consciousness. The PRC/CRC provides interdisciplinary evaluation and treatment to patients with cognitive, sensory and motor problems, and adjustment to potentially chronic disabilities. The objective of the PRC/CRC is to increase patients' functional independence and quality of life. The team consists of psychologists, rehabilitation neuropsychologists, physicians (physiatrists), nurses, speech and language pathologists, vision-rehabilitation specialists, occupational therapists, physical therapists, social workers, and case managers. A number of military liaisons also work within the interdisciplinary team, in order to facilitate treatment and discharge planning for active duty service members.

The psychologists on this service provide assessment and treatment services directly to patients, as well as consultation services to the treatment team. The direct service component includes: neuropsychological and psychodiagnostic testing, writing prognostic treatment plans, individual supportive psychotherapy, cognitive rehabilitation, behavior management, and family intervention. The consultation component includes: bi-weekly staff meetings, participating in family conferences, conducting educational rounds, and developing educational and research programs on the unit.

Psychology training focuses on patient care and consultation services. Emphasis is placed on neuropsychological and psychological evaluation and treatment of medically ill patients and psychological adjustment to disability/illness for patients and their family. Interns will participate in the full spectrum of psychological services offered on this unit, as described above. Interns conduct psychological evaluations and psychotherapeutic interventions for the patients in this program. As these patients often stay for some time, and may be seen by psychology several times per week, the intern has an opportunity to compare the patient's everyday behavior with the results of their testing, to observe functional change across time, and actively implement patient-centered treatment interventions. The emphasis on longitudinal exposure to neuropsychologically involved patients is in direct contrast to the cross-sectional approach of consulting and liaison assessment rotations. Interns will have the opportunity to work on an interdisciplinary team and provide consultation to team members regarding treatment planning, behavioral management, and provide psychoeducation as appropriate. The staff psychologist provides 2 to 4 hours of supervision per week for a half-time rotation.

**Polytrauma Transitional Rehabilitation Program (PTRP)
(Building MB2, PAD)**

Supervisors: Carey Pawlowski, Ph.D., ABPP-RP, Rehabilitation Psychology emphasis
Jennifer Loughlin, Ph.D., Neuropsychology emphasis

Rotation Description and Patient Population: PTRP is a 12-bed post-acute residential rehabilitation unit within the Polytrauma System of Care (PSC) for Active Duty Service Members and Veterans with a recently acquired brain injury or Polytrauma (generally 1 month to 1 year post injury). Medical and neurologic diagnoses include but are not limited to traumatic brain injury, cerebrovascular accidents (strokes), complex medical histories, amputations, tumor resection, encephalopathy and other CNS neurological disorders, and complex psychiatric history including PTSD, depression, anxiety, and bipolar disorder Type I and II. Focus is on the neurocognitive rehabilitation and re-integration back to the community, return to work, school, and/or meaningful activity.

The intern would work with either the neuropsychologist or the rehabilitation psychologist as his or her primary supervisor. Interns working with the neuropsychologist are expected to have some background in neuropsychological assessment. Interns working with the rehabilitation psychologist would be expected to have an interest in rehabilitation, health challenges, or trauma.

Psychology's role in the setting:

Neuropsychology's role is to serve as diagnostic and treatment consultants to interdisciplinary staff, describe patient's cognitive status, strengths and limitations, comment on short and long-term cognitive prognosis, develop and implement cognitive rehabilitation treatment plans, complete decision-making capacity evaluations, provide psychoeducation to patients and their families, and co-treat with other rehabilitation staff, as needed.

Rehabilitation Psychology's role is to be an integral member of the interdisciplinary team involved in diagnosis, treatment planning and implementation, behavioral management, providing psychoeducation to patients and families, consultation to other team members and teams, and individual and group psychological intervention to patients who sustained a recent life-altering physical and neurological trauma.

Other professionals and trainees in the setting: Interdisciplinary team including Psychiatrist (medical specialty of physical medicine and rehabilitation), occupational therapists, physical therapists, nurses, social workers, speech and language pathologists, psychiatrists, recreation therapists, low-vision specialists, and military liaisons, as well as psychology interns, fellows, and other discipline-specific trainees.

Nature of clinical services delivered:

Neuropsychology: Comprehensive neuropsychological assessment with feedback to the patient and family members (as available), as well as to the interdisciplinary team; provide cognitive rehabilitation in individual sessions; psychoeducation on brain-behavior relationships to patients, family, and staff; and provide consultation to staff as the "cognitive lead." Neuropsychological assessments are typically administered at admission and/or at discharge, depending on the recency of the patient's last evaluation and/or clinical need.

Rehabilitation Psychology: Individual and group psychotherapy; behavioral management planning and implementation; psychoeducation to the interdisciplinary treatment team, patients, and their families on the effects of neurological impairment on behavior and emotions, as well strategies for behavioral management and emotional regulation; psychosocial adjustment and

wellness groups; and psychological assessment (rehabilitation psychology, behavioral medicine, and/or personality-based instruments as a supplement to clinical interview and behavioral observations in both clinical and community settings).

Intern's role in the setting: Interns are full members of the interdisciplinary treatment team, working with all team members to help patients reach their rehabilitation goals. They serve as apprentices and take primary responsibility for performing all aforementioned roles of the staff neuropsychologist and/or rehabilitation psychologist under supervision and within the context of a supportive training environment.

Amount/type of supervision: On a half-time rotation, at least one hour per week of individual supervision plus two hours per week of supervision in team sessions; Drop-in consultation is strongly encouraged; supervisors are available on site during the day.

Rotation-Specific Meetings and Trainings: 2 hours biweekly in neuropsychology seminar, assigned by supervisor readings, educational interdisciplinary, PM&R, and psychology rounds, Polytrauma grand rounds/seminars, PTRP in-service presentation at the end of the rotation.

Pace:

Neuropsychology: Number of neuropsychological assessments (typically a 4 hour battery) completed over the course of the rotation varies based on census and the patient's rehabilitation process, but typically are done at admission and/or discharge from PTRP. Interns will carry a caseload of 2-3 patients for individual cognitive rehabilitation (typically 2x weekly per patient); 1 optional case of individual psychotherapy with full admission intake, psychological assessment, and treatment planning; attendance at weekly interdisciplinary meetings; and participation in family meetings (1-2 over the patient's rehabilitation course).

Rehabilitation Psychology: Varies based on census and the patient's rehabilitation process, with typical caseload of two to three individual psychotherapy patients (including treatment planning and implementation, providing individual treatment 1 to 4 x weekly per patient, consultation with staff as needed, and keeping current with all electronic charting); lead psychosocial adjustment and wellness group (2x week); attendance at weekly interdisciplinary meetings; and participation in family meetings.

Use of Digital Mental Health tools: Encourage and support use of VA mobile apps, as appropriate.

COVID-19 Pandemic Precautions: Required masking of all staff, patients, and visitors. One mask issued per day per staff member. Increased hand hygiene and disinfection of surfaces, including neuropsychological test materials. Plexi-glass barrier available for testing and individual sessions. Formal team meetings held in-person and through telecommunication.

Competencies Met on this Rotation: a) neuropsychological and/or psychological assessment, b) intervention, c) consultation, supervision, and teaching, c) scholarly inquiry and research, d) organization, management, program development, and program evaluation, e) professional issues/development, f) ethical, and legal issues, and g) cultural and individual diversity.

"PTRP offers a unique opportunity to see Neuropsych profiles "come to life" as patients learn to adapt to their areas of difficulty in real world settings. The treatment team is warm and welcoming, and the supervision is both comprehensive and extremely supportive." ~Recent intern/fellow

The VA Palo Alto Health Care System houses the Polytrauma System of Care, with Palo Alto being one of five comprehensive facilities in the country designed to provide intensive rehabilitative care to Veterans and active duty service members with polytrauma (i.e., those who have experienced severe injuries to more than one organ system, including the central nervous system). The four main programs under this Polytrauma System of Care umbrella at VA PAHCS are: (1) the Polytrauma Rehabilitation Center (PRC, housed in 7D, which provides acute and sub-acute in-patient care); (2) the Polytrauma Transitional Rehabilitation Program (PTRP); (3) the Polytrauma Network Site (PNS, which provides outpatient treatment); and (4) the OIF/OEF program (primarily providing case management and outreach).

The Polytrauma Transitional Rehabilitation Program (PTRP) is a post-acute, transitional, milieu-based, residential program designed to transition patient with a brain injury from acute inpatient rehabilitation to living in the community or return to military duty. Typically, patients are moderately to severely impaired neurologically, although generally medically stable and able to participate in comprehensive and intensive rehabilitation toward re-developing home, work, and/or community roles. Patients who sustained milder injuries may also be considered for admission to PTRP. Patients live on the unit (MB2) during the initial phase of the program and may transition to day treatment while living in the community. Length of stay varies according to particular patient goals and progress, but a typical length of stay in the PTRP is three to six months.

Given the polytraumatic nature of the injuries in the PTRP, interns will have the opportunity to work with patients on issues related to brain injury/neurological impairment and co-occurring conditions such as PTSD, visual impairment, amputations, orthopedic injuries, etc. The PTRP operates in a truly interdisciplinary method. Collaboration is key, with various disciplines working together and mutually reinforcing specific patient goals (e.g., cognitive enhancement and compensation, physical health and wellness, life skill development, psychosocial adjustment, etc.). Cognitive rehabilitation retraining is woven throughout the program. The interdisciplinary treatment team works with each patient to meet his or her specific community re-entry goals as well as the criterion goals of the three program phases: (1) Foundation-building; (2) Skill-building; (3) Community application.

With all of the above in mind, the PTRP staff not only have an opportunity to get to know the patients (and often their families) quite well, we also have the opportunity to help them enhance their quality of life while resuming and adapting to various roles in their homes and in the community. The community-integration focus makes this setting a unique opportunity for clinicians to observe, guide, and provide feedback to patients while they are engaging in “real life” events (ranging anywhere from successfully maneuvering through all of the steps necessary to attend a baseball game in the community to developing a comprehensive life-goal plan such as attending college or obtaining employment.)

“The large staff to patient ratio allows for in-depth clinical experiences with individual clients and the ability to see how polytrauma is addressed from an interdisciplinary format. The team functions together in a very professional and collegial manner.”
~Recent intern

On the PTRP rotation, it is our sincere hope that the intern continues on his or her professional development pathway while enhancing versatile skills in assessment, intervention, and consultation. As supervisors, our mutual aim is to provide plentiful support while promoting the intern’s increasing sense of responsibility and independence as such skills develop, thereby fostering a sense of professional identity and self-efficacy.

Psychological Assessment Unit (Building 6, PAD)
Supervisor: James A. Moses Jr., Ph.D., ABPP-CN

Patient population: Mixed neuropsychiatric and medical patients. Most patients are multiply- diagnosed with medical, psychiatric, and substance abuse problems. Neuropsychiatric diagnosis often is uncertain at time of referral. The patient population is diagnostically and demographically diverse.

Psychology's role: We serve as diagnostic consultants to interdisciplinary staff throughout the medical center.

Other professionals and trainees: Practicum students and Psychology Interns.

Nature of clinical services delivered: We evaluate patients' cognitive and mental status strengths and deficits, to make differential diagnoses between neurologic and psychiatric components of cognitive deficit or psychiatric disorder, and to make recommendations for management when appropriate.

Intern's role: Interns take primary responsibility for diagnostic evaluation of cases that they choose from referrals made to the unit. They select, administer, score, and interpret a battery of tests that is appropriate to address the referral question. Reports are written for the referring clinician based on the test results, the history, and interview data. Very occasionally an advanced intern with a well-defined question may choose to collaborate with Dr. Moses to formulate a psychometric research study that makes use of extensive archival psychometric data. Every attempt is made to integrate new developments in empirically based assessment with clinical practice. We evaluate our clinical procedures empirically on an ongoing basis. Research results are the basis of our clinical guidelines.

Amount and type of supervision: Individual supervision is provided on a weekly basis, drop-in consultation is encouraged.

Didactics: Attendance at Grand Rounds in psychiatry, neurology and/or neurosurgery is encouraged.

Pace: Interns typically take one case at a time to evaluate. Time to test a patient and do the write-up optimally would be 5-7 working days, but more time may be required for complex cases. Cases that require only actuarial assessment may be done in less time. Preliminary feedback notes to the referral source are encouraged. Rate of writing is adjusted to optimize the quality of the analysis and to conform to the experience level of the intern.

Use of Digital Mental Health tools: Automated test scoring for almost all assessment procedures is used to optimize valid test scoring and to minimize clerical workload.

The Psychological Assessment Unit provides diagnostic psychological testing services to the Palo Alto Division by consultation. Staff psychologists, psychology interns, psychiatrists, medical and psychiatric residents and staff, and other health care professionals send referrals for evaluation of patients who present complex diagnostic problems.

A very diverse range of patients with neurological and/or psychiatric disorders are routinely assessed to evaluate their intellectual, memorial, mental status, personality, and neuropsychological functioning. Our clinical role is primarily differential diagnosis and evaluation of the patient's unique pattern of cognitive strengths and weaknesses. The goal is to provide comprehensive behavioral and cognitive assessment services, which can aid treatment team personnel to plan an individualized program for each patient we evaluate.

Interns who choose this training assignment may conduct assessments of cases from the Psychological Assessment Unit or from their own treatment caseload from other training sites. The number of cases seen depends on the intern's schedule, motivation, experience, and case complexity. We emphasize quality over quantity of experience in skill building and professional service delivery. Basic assessment of intellectual functioning, memorial functions, neuropsychological screening and personality/mental status assessment are the core skill areas to be mastered. The tests used to achieve these goals will vary with the assets and limitations of the patient. Goals for training will be set individually for each intern in consultation with the supervisor at the outset of the training period and are modified as is necessary.

We provide each intern with exposure to a wider range of clinical experience than is available at a university clinic. Experiences with psychotic, brain damaged, geriatric, and physically impaired patients usually are new to interns who train on this unit. Training in assessment on the Psychological Assessment Unit always is provided on a part-time basis for pre-doctoral interns.

Individual supervision is provided weekly by the supervising neuropsychologist.

Reviewed by: James A. Moses, Ph.D., ABPP-CN

Date: 8/29/2020

San Jose Outpatient Neuropsychology Clinic (5855 Silver Creek Valley Pl, San Jose Division)
Supervisor: Kacey Marton, Ph.D.

Patient population: Broad-ranging, general outpatient population consisting of community-dwelling Veterans aged 18 to 90+ with suspected cognitive concerns/complaints, often with neurological conditions, psychiatric co-morbidities (particularly anxiety, depression, PTSD), and considerable medical complexity. The majority of patients are older adults, but younger Veterans are also seen (often with concerns related to educational/occupational functioning). A small minority of patients are women. Veterans are seen at the San Jose Community-Based Outpatient Clinic to allow for Veterans living further South to more easily access care.

Psychology's role: Provision of neuropsychological and psychological comprehensive and/or brief assessment/screening, patient and family feedback and education, and interdisciplinary team consultation.

Other professionals and trainees: Neuropsychology/Psychology practicum students, interns, and postdoctoral fellows may rotate in this setting. Interdisciplinary consultation involves communication with a range of disciplines, most typically physicians (particularly neurologists, psychiatrists, geriatricians, primary care MDs), psychologists, nurse practitioners, and social workers.

Nature of clinical services delivered: Brief and comprehensive neuropsychological and psychological assessment, provision of feedback to referral sources, patients, and caregivers (including psychoeducation on the role of non-neurological contributions to cognitive difficulties), and interdisciplinary consultation and collaboration.

Intern's role: Trainees conduct clinical interviews and select, administer, score, and interpret test batteries appropriate to address the referral question. Reports are written for the patient and referring clinician based on the test results, history, chart review, and interview data with patients and (if applicable) collateral informants. Feedback is given to patients and/or their loved ones. Trainees will likely communicate regularly with referring providers and other relevant providers as needed. If practicum students are simultaneously on rotation, trainees may have the opportunity to supervise practicum students. Opportunities for clinical encounters via telehealth will likely be available.

Amount and type of supervision: Minimum 1-2 hours of individual supervision is provided on a weekly basis (minimum 1 hour if the number of rotating trainees facilitates group supervision or virtual group supervision across VA campuses is simultaneously available; minimum 2 hours if exclusively individual), with additional drop-in consultation encouraged as needed.

Didactics: Trainees are strongly encouraged to attend biweekly VAPAHCS Neuropsychology didactics (discussing a wide range of topics) and Neuropsychology/Rehabilitation Psychology journal clubs, as well as monthly Geropsychology seminars if an area of interest. Additional group-based didactic trainings may be available if facilitated by the number of trainees rotating at a given time.

Pace: Moderate to rapid; trainees will typically evaluate 1-3 cases weekly. Report turn-around is targeted at one week. Preliminary feedback reports to the referral source are standard. Rate of writing is adjusted to optimize the quality of the analysis and to conform to the experience level of the trainee.

Use of Digital Mental Health tools: Evaluations may occur via telehealth, and trainees may facilitate provision of VA-provided “digital divide” tablets to increase accessibility to care, as needed (particularly in regards to COVID).

Competencies Met on this Rotation: a) neuropsychological assessment, b) consultation and interprofessional skills, c) scholarly inquiry and research, d) supervision (if appropriate/other trainees rotating), e) organization, management, program development, and program evaluation, f) professional issues/development, g) ethical and legal issues, and h) cultural and individual diversity

Spinal Cord Injury and Disorders Clinic (Building 7, F wing, PAD)

Supervisor: Jon Rose, Ph.D.

Rotation Description and Patient Population: This comprehensive specialty outpatient program serves outpatients in Northern California, Hawaii, Pacific Territories and parts of Nevada. Persons served have spinal cord injury or dysfunction (M.S., A.L.S., spinal stroke, tumors, etc.), ages 18 to 90 (mean age 64), with duration of injury from a few days to 60 years. All SCI/D Veterans are eligible regardless of when they were injured, so our patients are extremely diverse in culture, income, education and achievement. Many patients have concomitant or subsequent TBI. Despite their disabilities, people often become more functional and socially active as a result of their rehabilitation experience. We follow our patients at least once a year for life, so there is an opportunity to observe how people adapt to disabilities throughout adulthood, and how adult development and aging interact with disability. Psychology interns see many different problems, yet most of our patients do not see themselves as mental health patients, even when receiving psychological interventions. Interdisciplinary assessments are usually done 10:00 to 4:00, Tuesdays from 9:00 to 4:00 and Fridays from 10:00 to 3:00. Further psychological interventions and assessment are done at times convenient to the intern. The rotation requires 18 hours per week including Tuesdays from 7:30-2:30. An ideal schedule to allow time for supervision of practicum students includes all day Monday or Friday, Tuesday 7:30 to 2:30 and 4 hours on Thursday.

Psychology's role in the setting: Psychology's role: Clinical services to patients, consultation with other disciplines, psychology education of staff and trainees, and participation in the management of team dynamics.

Other professionals and trainees: Medicine, Nursing, Occupational Therapy, Physical Therapy, Recreation Therapy and Social Work.

Safety: During the pandemic, everyone entering the VA campus is screened for symptoms of COVID. Entrance to our building is restricted to staff, trainees and scheduled patients. No family or other visitors are admitted and everyone is screened again plus has their temperature taken at the entrance. Trainee work stations are > 6 feet apart and masks are required for everyone in the building when this social distance cannot be maintained. Additional precautions are being developed for neuropsychological assessments and we will not begin testing until we are confident this can be done safely. At this time I anticipate we will be performing formal assessments long before the 2021/22 training year.

Nature of clinical services delivered: Screening for cognitive functioning and mental health disorders, neuropsychological and personality assessment, individual brief and long-term therapy with some family therapy, sexuality counseling, behavioral medicine interventions (obesity, pain, etc.), substance abuse treatment, interdisciplinary dementia treatment, consultation with other disciplines, psychological education of staff and trainees, and participation in the management of team dynamics. Provide neuropsychological assessment of identified problems includes: learning styles, functional decline, capacity (e.g., to manage care, decisions, finances or driving), mood and personality disorders, and

behavioral and social problems. Some care is given by telephone and video telehealth to patient's homes due to the large catchment area.

Intern's role in the setting: The major goal of the rotation is to learn how to function in a medical setting as a fully integrated member of an interdisciplinary team, providing assessment, consultation, teaching, prevention, and treatment. Interns also provide supplemental supervision of two practicum students.

Amount/type of supervision: Live supervision of new skills, 1-hour each of individual supervision, group supervision and psychology rounds. Level of autonomy is individually negotiated according to training goals. Therapy orientations: behavioral, cognitive, person-centered, psychodynamic, motivational interviewing, ACT, and systems approaches. Interns are supervised in a developmental model of supervision for their two students. Interns are encouraged to become active in the interdisciplinary Academy of SCI Professionals, The Society of Clinical Geropsychology, and/or Division 22 (Rehabilitation Psychology) of The American Psychological Association, and provided appropriate mentorship in professional development.

Rotation-Specific Meetings and Trainings: Assessments are done to assist both patients and clinic providers, so there is much opportunity to observe the ecologic validity of findings and recommendations. SCI Grand Rounds Thursdays from 8:15-9:00 typically consist of reviewing spinal cord and some brain MRIs related to current treatment decisions. Interns have the opportunity to become more familiar with neuroanatomy and the limits of imaging techniques. Occasionally staff will present special topics of interest to all disciplines. Interns may present assessment findings with suggestions to improve care of difficult patients. Tuesday psychology rounds at 9 AM teach concise record review and assessment planning, with an emphasis on what psychology can offer each patient. Group supervision initially provides orientation to the clinic and SCI/D, then covers a variety of topics chosen by trainees including specific disorders, specific tests, psychotherapy orientations, biofeedback, clinical hypnosis, and professional development. Interns schedule individual supervision weekly with Dr. Rose and with each of their own trainees.

Pace: Frequently fast and demanding in clinic, with plenty of time for writing reports and notes on other days. Progress notes should be drafted on the day of patient contact. Assessment reports should be written within a week of completing the exam. The supervisor reviews all notes and reports via e-mail. Workload can be managed within the allotted time.

Use of Digital Mental Health tools: Video Telehealth to Home is frequently used due to our vast catchment area. Since this was already part of our standard training, SCI clinic trainees were able to begin working from home relatively soon after the onset of the COVID-19 pandemic. Currently interns and staff are onsite to facilitate team coordination, but most patients are seen via telehealth. We utilize some mental health apps developed by VA as needed. Examples are ACT Coach and Virtual Hope Box.

Competencies Met on this Rotation: a) neuropsychological assessment, b) intervention, c) consultation, supervision, and teaching, d) scholarly inquiry, e) program evaluation, f) professional issues/development, g) ethical, and legal issues, and h) cultural and individual diversity.

Spinal Cord Injury Center (Building 7, PAD)
Neuropsychology/ Neurorehabilitation Assessment and Intervention
Spinal Cord Injury and Disorders (inpatient and home care)
Supervisor: Daniel Koehler, Psy.D.

Rotation Description and Patient Population: The Spinal Cord Service follows Veterans from the time of their injury (spinal cord injury) or diagnosis (multiple sclerosis, amyotrophic lateral sclerosis, Friedreich's spinocerebellar ataxia, and neuromyelitis optica) throughout their life span. Neuropsychological screening evaluations are completed on all Veterans with comprehensive neuropsychological evaluations for Veterans with neurocognitive disorders which may include traumatic brain injury, vascular dementia, stroke, Alzheimer's dementia, frontal temporal dementia, and multiple sclerosis.

Referral questions can be diagnostic in nature but are typically related to assisting the interdisciplinary team to help the Veteran maximize function or quality of life. Therefore, the evaluation often requires subsequent intervention. In addition, the trainee will be expected assist the inpatient and home care teams with the treatment of neurocognitive disorders. This will involve team consultation, cotreatments, education, treatment plan development, and supporting the execution of the plan. Moreover, the trainee will work with the Veteran on an individual basis to develop and employ cognitive strategies. This often takes place within the context of the Veteran being diagnosed with an adjustment disorder (anxiety and depressive symptoms). The trainee will also have the opportunity to be the neuropsychology representative of the multidisciplinary team at the weekly Amyotrophic Lateral Sclerosis Clinic – pending clinic operational status.

Other professionals and trainees in the setting: Inter-professional team consisting of psychiatry, internal medicine, pulmonologists, neurology, nursing, physical therapy, occupational therapy, speech pathology, psychology, recreational therapy, social work, respiratory therapy, and other disciplines. This is a training site with trainees from all disciplines including psychology fellows and practicum students.

Intern's role: The intern will attend interdisciplinary meetings to provide guidance and consultation for neuropsychological impacts on the rehabilitation process and functional independence. Once it is determined that a neuropsychological evaluation is indicated, the trainee will generate an appropriate battery considering barriers of physical abilities, time, fatigue, and inpatient systems in order to answer the referral question as efficiently as possible. The battery length may range from an hour up to four hours. The testing may be completed in one day or over the course of the week. Once the testing is completed, preliminary results are expected to be communicated to the team within the IDT meeting and documented in progress notes as soon as possible. Turnaround time is imperative on this rotation as treatment decision are being made daily. The full report should be completed within a week from completion of testing. If the results indicate intervention, the trainee will be expected to formulate a neuropsychological treatment plan, educate team members, and execute the plan. The trainee will be expected to participate and potentially lead the weekly neuropsychological case conference meetings. The trainee also has an option to participate as part of the SCI Home Care Team, where they would be expected to evaluate and provide intervention within the Veteran's homes when indicated. Given COVID-19, all homecare treatment has transitioned to the VA's VVC telehealth platform.

Supervision: 1 hour per week individual supervision, 2 hours per week supervision in team sessions; drop-in consultation is encouraged, supervisors are available on site during the day (on the unit or via phone).

Rotation-Specific Meetings and Trainings: Monday afternoon Home Care team meeting, Tuesday interdisciplinary team meeting, Tuesday group supervision with all psychology trainees, Thursday psychosocial huddle, family and team meetings, Thursday neuroradiology rounds, weekly Neuropsychology case conference, and Thursday afternoon ALS Clinic.

Pace: Moderate to Rapid.

Use of Digital Mental Health tools: None.

Competencies in Clinical Neuropsychology (per the Houston Guidelines) will be emphasized during this rotation: a) neuropsychological assessment, b) intervention, c) consultation, supervision, and teaching, c) scholarly inquiry and research, d) organization, management, program development, and program evaluation, e) professional issues/development, f) ethical, and legal issues, and g) cultural and individual.

Geriatric Neuropsychology Track Training

Overview: Clinical Geriatric Neuropsychology Internship Training

One internship slot is reserved for the Geriatric Neuropsychology Internship training track. This track will meet the Pikes Peak Geropsychology competencies and also prepare the intern to be highly competitive for a Division 40 two-year neuropsychology fellowship. This track is especially beneficial for those interested in assessment of aging-related disorders including neurodegenerative diseases. Those who wish to pursue Board Certification in Clinical Neuropsychology and/or Geropsychology are especially encouraged to consider this emphasis area.

The following sites are primary training rotations for Clinical Geriatric Neuropsychology, which includes a combination of both clinical neuropsychology and geropsychology rotations:

- Memory Clinic (Lisa Kinoshita, Ph.D.) – ***required rotation in this track***
- Neuropsychological Assessment and Intervention Clinic (John Wager, Ph.D.)
- Psychological Assessment Unit (James Moses, Jr., Ph.D., ABPP-CN)
- Polytrauma Network Site (Kristina Agbayani, Ph.D., ABPP-CN)
- Polytrauma Rehabilitation Center/Comprehensive Rehabilitation Center (Tiffanie Sim Wong, Ph.D., ABPP-RP; Alexandra Jouk, Ph.D.)
- Polytrauma Transitional Rehabilitation Program (Carey Pawlowski, Ph.D. ABPP-RP; Jennifer Loughlin, Ph.D.)
- Inpatient Spinal Cord Injury Unit (Daniel Koehler, Psy.D.; TBD)
- Outpatient Spinal Cord Injury Clinic (Jon Rose, Ph.D.)
- Community Living Center - Short-stay/Rehab & Long-term care units (Margaret Florsheim, Ph.D.)
- Geriatric Outpatient Mental Health (Erin Sakai, Ph.D.)
- GRECC/Geriatric Primary Care Clinic (Christine Gould, Ph.D. ABPP-Gero; Erin Sakai, Ph.D.)
- Geropsychiatry Community Living Center (James Mazzone, Ph.D.)
- Home Based Primary Care Program (Elaine McMillan, Ph.D.; Jennifer Ho, Psy.D.)
- Hospice and Palliative Care Center/Sub-Acute Medicine Unit (Kimberly Hiroto, Ph.D.)
- MIRECC (Sherry Beaudreau, Ph.D., ABPP-Gero; J. Kaci Fairchild, Ph.D., ABPP-Gero; Lisa Kinoshita, Ph.D., Allyson Rosen, Ph.D., ABPP-CN)
- Western Blind Rehabilitation Center (Laura Peters, Ph.D.)

In addition, a few interns in recent years have chosen outpatient neuropsychology training experiences at the San Jose and Livermore Clinic sites (not described in this brochure and can be discussed with the Director of Training):

- Neuropsychological Assessment Clinic – San Jose Outpatient Clinic (Kacey Marton, Ph.D.)
- Outpatient Neuropsychology Clinic - Livermore Division (Joshua McKeever, Ph.D.)

All eighteen [Clinical Neuropsychology](#) and [Geropsychology](#) rotations are described in their respective sections. For the intern in the Geriatric Neuropsychology track, one rotation of the 4 primary rotations will be the Memory Clinic, another will be in neuropsychology, and at least one will be in geropsychology with a focus on intervention. The other training rotation can be selected from other clinical areas according to training needs and interests. Please note that *any of the rotations above are open to interns from any other tracks*; however, the process of choosing and assigning rotations is based on the intern's specific track and training goals. The intern in the Geriatric Neuropsychology track will share preferences in the assignment of these rotations with interns in related tracks (Clinical Neuropsychology and Geropsychology).

Below are a sample combination of rotations completed by recent interns:

Example A:

- Rotation 1: Memory Clinic
- Rotation 2: Community Living Center (short-term/rehab and long-term care)
- Rotation 3: Neuropsychological Assessment and Intervention Clinic
- Rotation 4: Inpatient Psychiatry Unit

Example B:

- Rotation 1: Memory Clinic
- Rotation 2: Outpatient Spinal Cord Injury Clinic
- Rotation 3: Polytrauma Transitional Rehabilitation Program
- Rotation 4: Men's Trauma Recovery Program

The intern in the Clinical Geriatric Neuropsychology track is expected to attend required didactics for both Neuropsychology and Geropsychology, which are described in their respective sections.

Memory Clinic (Building 6, PAD) **Supervisor: Lisa M. Kinoshita, Ph.D.**

Rotation Description: The VA Memory Clinic is an outpatient consultation clinic at the VAPAHCS which receives referrals from the General Medicine Clinic, Home Based Primary Care, Mental Health Clinic, GRECC, Neurology, Oncology, Hematology, and other specialty medicine clinics. The Memory Clinic focuses on assessment and differential diagnosis of complex cognitive and psychiatric disorders. Common disorders include dementia, mild cognitive impairment, stroke syndromes, age-associated cognitive impairment, sequelae related to neurodegenerative disorders, TBI, and neurological and vascular disorders. The clinic patient population primarily includes Veterans from Gulf War I, Vietnam War, Korean War and World War II eras who have cognitive complaints related to memory loss and other cognitive function changes. Trainees provide diagnostic impressions and treatment recommendations to providers and provide feedback to the patient and family. Interns in the Memory Clinic assess and treat complex patients with cognitive, medical and psychiatric co-morbidities. Trainees learn neuropsychological and psychological assessment and treatment using a scientist-practitioner model in which the empirical literature and clinical experience guide case conceptualization. Furthermore, the training rotation is embedded in a bio-psycho-social model of case conceptualization. Interns receive training in assessment and intervention delivery via in person and video teleneuropsychology modalities. Trainees gain experience with medical, financial, and legal capacity evaluations and conservatorship evaluations. All assessments provide referring clinicians with differential diagnosis and treatment recommendations that impact the patient's quality of life and future planning.

Patient population: The patient population includes medical and psychiatric outpatients and medical inpatients. Patients are primarily older adult Veterans with medical and psychiatric co-morbidities and changes in cognitive functioning, memory concerns, or dementia. Trainees also work with the patient's family and caregivers.

Psychology's role: Provide direct clinical service (neuropsychological and psychological comprehensive assessment, cognitive rehabilitation, family interventions); consultation with providers, patients, family; interdisciplinary team participation, case presentation. Conduct research.

Other professionals and trainees: Interns receive training in interdisciplinary teams. One training opportunity at the Memory Clinic includes the Cognitive Assessment Clinic (CAC) in which interns work within an interdisciplinary team that includes providers in neurology and geriatrics. The CAC interdisciplinary team clinic is on Thursday mornings from 8-12:30. The Memory Clinic's consultation staff consists of an interprofessional clinical team, including psychologists, neurologists, geriatricians,

practicum students, interns, and postdoctoral fellows and residents in clinical psychology, psychiatry and neurology.

Nature of clinical services delivered: Trainees conduct clinical interviews, neuropsychological screening, comprehensive neuropsychological and psychological assessments, provide feedback to interdisciplinary team members, referral sources, patient, and caregivers. Trainees provide cognitive rehabilitation, individual, couples and family psychotherapy, caregiver education and psychotherapy, and interprofessional consultation. Training in cognitive rehabilitation and interdisciplinary team clinic is available to interns.

Intern's role: Direct clinical service provider, consultant, interdisciplinary team member, liaison with other services. Administration, scoring, interpretation and report writing of neuropsychological screening and comprehensive neuropsychological and psychological assessment batteries, provide feedback to interdisciplinary team members, referral sources, patient and caregivers regarding outcome of evaluation, provide cognitive rehabilitation, individual, couples and family psychotherapy and interprofessional consultation.

Supervision: A minimum of 1 hour of individual supervision per week and 1.5 hours of group supervision per week, with additional supervision individual and/or group supervision as needed. Supervisor will observe trainee during sessions with patients (live supervision) as well as review verbal and written reports and case presentations.

Didactics: One-on-one training in neuroradiology, review of patient's neuroradiology with neurology staff, observation of neurological exams, weekly neuropsychology and geropsychology seminar, board certification and fact finding didactics, pertinent psychiatry, neurology and neurosurgery Grand Rounds at Stanford.

Pace: Moderate to rapid pace expected. Trainees will have 2-3 assessment patients per week and 1-2 psychotherapy or cognitive rehabilitation patients per week. Progress notes are required for each patient contact within 24 hours. Final assessment reports are expected to be completed within 1-2 weeks following completion of the neuropsychological evaluation.

Use of Digital Mental Health tools: Smart phones and electronic tablets are used when available in cognitive rehabilitation.

Competencies Met on this Rotation: a) neuropsychological assessment b) intervention, c) consultation, supervision, and teaching, c) scholarly inquiry and research, d) organization, management, program development, and program evaluation, e) professional issues/development, f) ethical, and legal issues, and g) cultural and individual diversity.

Pikes Peak Competencies: The psychology trainee will gain training in the following Pikes Peak Competency areas: research and theory; cognitive psychology and change; social/psychological aspects of aging; biological aspects of aging; psychopathology issues relevant to aging; problems in daily living; sociocultural and socioeconomic factors; assessment of older adults; treatment; prevention and crisis intervention; consultation; interface with other disciplines; and special ethical issues.

Clinical Research Programs

Health Services Research & Development Center for Innovation to Implementation (Ci2i, Building 324, MPD)

Supervisor(s): Daniel Blonigen, Ph.D.
Jessica Breland, PhD
Ruth Cronkite, Ph.D.
Adrienne Heinz, Ph.D.
Keith Humphreys, Ph.D.
Rachel Kimerling, Ph.D.
Eric Kuhn, Ph.D.
Mark McGovern, Ph.D.
Amanda Midboe, Ph.D.
Elizabeth Oliva, Ph.D.
Craig Rosen, Ph.D.
Christine Timko, Ph.D.
Eric Schmidt, Ph.D.
Jodie Trafton, Ph.D.
Ranak Trivedi, Ph.D.
Julie Weitlauf, Ph.D.
Shannon Wiltsey Stirman, Ph.D.
Lindsey Zimmerman, Ph.D.

Patient population: Veterans enrolled in the VA and receiving a wide variety of care including primary care, specialty mental health care (e.g., substance abuse treatment and chronic disease management), and Veterans enrolled in research studies.

Psychology's role: Ci2i researchers, many of whom are psychologists, play a critical role in development, dissemination, delivery, implementation, and evaluation of clinical services. At Ci2i, psychologists conceive and answer important questions about outcomes, quality, and costs of publicly funded mental health services.

Other professionals and trainees: The Ci2i community includes a variety of experts in health services research areas, including health economics, epidemiology, public health, medical sociology, and biostatistics.

Nature of clinical services delivered: No direct clinical services are provided.

Intern's role: In consultation with a research mentor, interns develop and implement a research project related to one of the Center's several ongoing or archival studies. Over the course of the rotation, interns are expected to develop a report of their project that is suitable for presentation at a scientific conference and/or publication in a peer-reviewed journal.

Amount/type of supervision: One or two research mentors are assigned to each intern. Supervision will be as needed, typically involving several face-to-face meetings per week.

Didactics: The Center sponsors a weekly forum on a variety of relevant health services research topics; attendance is required. The research mentor and intern may choose to incorporate additional seminars, e.g., Grand Rounds, presentations at Stanford, study groups, etc. The intern and mentor will determine readings relevant to the chosen research project and areas of interest.

Pace: The goal of completing a research project from conception to write up within six months requires skillful time management. Rotation supervisors help the intern develop a rotation plan. Interns at Ci2i benefit from a coherent rotation focus with minimal additional requirements.

Use of Digital Mental Health tools: Ci2i investigators conduct research on mobile applications such as an app for self-management of drinking problems, an app for weight-loss management, and an app for cognitive training for Veterans with co-occurring PTSD and alcohol use disorder, as well as research on video telehealth for Veterans with barriers to in-person care. Ci2i investigators collaborate with investigators from NCPTSD's Mobile Apps Team to study the usability, effectiveness, and implementation of various mobile health tools.

The HSR&D rotation offers interns ongoing professional development as researchers within the context of a national center of research excellence. The Center for Innovation to Implementation ([Ci2i](#)) is one of the VA Health Services Research and Development Service's (HSR&D) national network of research centers. Ci2i has strong collaborative relationships with several other research programs at the Palo Alto VA, including the Program Evaluation and Resource Center (PERC), and the Health Economics Research Center (HERC). Ci2i is also affiliated with the Stanford University School of Medicine. Ci2i's mission is to conduct and disseminate health services research that results in more effective and cost-effective care for Veterans and for the nation's population as a whole. We work to develop an integrated body of knowledge about health care and to help the VA and the broader health care community plan and adapt to changes associated with health care reform. One main focus of the Center is on individuals with psychiatric and substance use disorders. Other foci that may be of interest to clinical psychology interns include the quality and value of medical specialty care for Veterans with co-occurring medical and mental health conditions, and implementation science.

Interns at Ci2i become involved in activities designed to improve their ability to conduct and interpret health services research. The organizational philosophy at the Center is strongly emphasized in its internship rotation: We believe that a collaborative, clear, and supportive work environment contributes to professional development and training outcomes. Interns are expected to attend presentations that are relevant to the field, read research articles related to their research topic, and generally participate in the intellectual life of the Center. Interns may receive training in a range of research skills, including quantitative and/or qualitative methods, assessment, statistics, data management, and statistical programs such as SPSS. Interns may also receive mentoring on professional development issues, e.g., integrating clinical practice experiences and knowledge into conceptualization of health services research questions, clarifying their own research interests and goals, applying for research-related jobs, scientific writing, grant proposal writing, project administration, publishing, presenting at professional meetings. This rotation may be particularly useful for interns who are planning academic/research careers or are preparing for administrative/clinical roles in which understanding and conducting health services research (e.g., program evaluation) is a major professional activity. Goals for the HSR&D internship rotation include the following:

Interns will participate in an effective research-oriented work environment. The Center's organizational culture is both interpersonally supportive and intellectually stimulating. In the internship rotation, this culture includes encouraging and modeling effective professional communication, establishing collegial mentorship relationships between supervisors and interns, encouraging collaboration rather than competition, providing clear expectations and role descriptions, helping interns acquire skills, and supporting the intern in defining and achieving their own training goals.

Interns will be able to ask effective health services research questions by integrating clinical practice experiences into conceptualization of health services research questions, analyzing and understanding relevant research literatures, and connecting health services research questions with important VA and non-VA health care policy and services issues.

Interns will develop as professional health science researchers by clarifying their own health science research interests, developing collaborative communication skills within interdisciplinary clinical research settings, seeking consultation when appropriate, defining and achieving their own professional goals, and functioning as a productive member of an intellectual community. Interns should be able to attend to issues of race and culture in research conceptualization and implementation, including understanding the influence of one's own racial/ethnic background and those of research participants.

Interns will acquire relevant research competencies, including selecting and employing appropriate quantitative and/or qualitative data analytic methods, completing presentations suitable for presentation at a professional conference/submission to a professional journal, and/or understanding the basic mechanics of grant proposal writing and project management.

Broad domains of research for which rotation supervisors have datasets that could be made available to interns include:

- Longitudinal studies on the course and outcomes of Veterans and non-Veterans in treatment for substance use and/or other psychiatric disorders.
- Longitudinal studies on the course and outcomes of Veterans with co-occurring PTSD and substance use disorders.
- Telephone monitoring to increase care engagement for Veterans with substance use and/or other psychiatric disorders.
- Implementation and effectiveness of integrated services for adults with co-occurring substance use and psychiatric disorders in routine care settings.
- Implementation and effectiveness of treatments for Veterans and non-Veterans with opiate use disorders (e.g., medication-assisted treatment).
- Implementation of evidence-based psychotherapies (depression, anxiety, and PTSD) in VA and community settings.
- Evaluation and QI projects related to substance use and mental health treatment programming (e.g., opioid safety, naloxone distribution, suicide prevention).
- Unmet emotional and home and community based services for caregivers of Veteran.
- Pilot test of web-based program designed to support patient-caregiver dyads in self-management activities.
- Personal health record use of Veterans with co-occurring psychiatric disorders and medical conditions (e.g., HIV).
- Understanding Veterans' views and use of weight management programs.
- Health outcomes and experiences of care for women Veterans.
- Health care access and outcomes of criminally justice-involved and/or homeless Veterans.

Further information on the Center's activities is available by request, and on the website at <http://www.ci2i.research.va.gov/>. Interested interns should contact Dr. Blonigen at least three months prior to the beginning of the rotation to discuss the possibilities of a rotation in the Center. This rotation is available only as a full half-time rotation (6 months @ 18 hours/week).

**National Center for Post Traumatic Stress Disorder
Dissemination and Training Division (Buildings 324 & 334, MPD)**

Supervisors:

Eve Carlson, Ph.D.
Marylene Cloitre, Ph.D., Fellowship Director
Afsoon Eftekhari, Ph.D.
Rachel Kimerling, Ph.D.
Eric Kuhn, Ph.D., Acting Deputy Director, NCPTSD Dissemination and Training Division
Shannon McCaslin, Ph.D.
Carmen McLean, Ph.D.
Jason Owen, Ph.D., M.P.H.
Craig Rosen, Ph.D., Director, NCPTSD Dissemination and Training Division
Quyen Tiet, Ph.D.
Robyn Walser, Ph.D.
Shannon Wiltsey Stirman, Ph.D.
Steve Woodward, Ph.D., Director, PTSD Sleep Laboratory
Lindsey Zimmerman, Ph.D.

Patient population: Vietnam-era Veterans are the majority of VA PTSD patients nationwide, but projects also include Iraq and Afghanistan Veterans, Veterans exposed to military sexual trauma (MST), and Veterans of other conflicts (Korean War, the first Gulf War). Research has been conducted on hospital patients with traumatic injuries and family members of gravely injured hospital patients. The Dissemination & Training Division is also responsible for nationwide mobile mental health initiatives aimed at Veterans (and their family members) enrolled in inpatient or outpatient VA care, those receiving services in the community, and those not currently connected to mental health services. NCPTSD is also actively involved in developing and testing outreach and engagement strategies for Veterans who remain underserved such as rural Veterans, student Veterans, and women who have experienced MST. Development and testing of treatment interventions for alternative venues including primary care and telemental health to the home are ongoing.

Psychology's role: NCPTSD researchers and educators, most of whom are psychologists, play a nationwide leadership role in disseminating state-of-the-art treatments for PTSD, including a portfolio of widely-disseminated mobile apps (PTSD Coach, Mindfulness Coach, Family Coach, etc.), two national VA initiatives to train clinicians in evidence-based treatments, and video and web-based trainings for clinicians and web-based educational materials for trauma survivors. NCPTSD researchers conduct evaluations of VA mental health services, clinical intervention trials, implementation science, mobile apps and web interventions, assessment development studies, biological research, and neuroimaging studies.

Other professionals and trainees: Psychiatry, Research, Social Work, Public Health, Psychology Practicum Students.

Nature of clinical services delivered: Limited clinical services are delivered as part of specific research trials or user experience studies.

Intern's role: The training needs and interests of the intern define the mix of dissemination and research activities. Interns interested in dissemination work with National Center staff to develop PTSD-related products and services with potential for wide dissemination, or to take on a significant role in an ongoing implementation science or dissemination project. Interns interested in research work with a mentor to

develop and implement a research project related to one of NCPTSD's ongoing studies or archival datasets. Research interns are expected to develop a report of their project that is suitable for presentation at a scientific conference and/or publication in a peer-reviewed journal. Interns may also have an opportunity to participate in delivery of interventions in ongoing clinical trials. Interns interested in mobile mental health are expected to participate in mobile app development (content writing, wireframing, or user testing), analysis of data from mobile app trials, and user experience testing with Veterans.

Amount/type of supervision: One or two mentors are assigned to each intern. Supervision will be as needed, typically involving several face-to-face meetings per week.

Pace: The goal of completing a research project or education project from conception to write up within six months requires skillful time management. Rotation supervisors help the intern develop a rotation plan.

Use of digital mental health tools: Mobile applications for iOS and Android, including PTSD Coach, PTSD Family Coach, PE Coach, CBT-I Coach, Insomnia Coach, Mindfulness Coach, CPT Coach, Stay Quit Coach, AIMS, STAIR Coach, Mood Coach, ACT Coach, Couples Coach, and Beyond MST; web-based interventions including AIMS, Moving Forward, VA CRAFT, and webSTAIR.

The National Center for Posttraumatic Stress Disorder ([NCPTSD](#)) is a congressionally mandated consortium whose goal is to advance understanding of trauma and its consequences. The [Dissemination and Training Division](#) at the Palo Alto VAPAHCS, Menlo Park Division, is one of seven National Center divisions located at five sites. The others are located in Boston (Behavioral Science Division and Women's Health Sciences Division), Honolulu (Pacific Islands Division), West Haven (Evaluation Division and Clinical Neurosciences Division) and White River Junction, Vermont (Executive Division).

Interns may participate in ongoing research choosing from a variety of research opportunities. These include ongoing studies to evaluate VA policies related to screening, detection and treatment of PTSD, military sexual trauma, and other deployment-related health conditions; clinical trials of psychosocial interventions; psychometric instrument development; novel assessment methods development; laboratory and ambulatory psychophysiological and sleep studies; neuroimaging; longitudinal studies of the course of PTSD; and systems of care for recent trauma survivors. Cognitive, affective, psychobiologic and spiritual domains of PTSD are under investigation, as are related health service delivery issues.

Interns may participate in a broad range of dissemination and training initiatives. Current dissemination/implementation activities include two nationwide initiatives to train VA clinicians in Prolonged Exposure (PE) and in Acceptance and Commitment Therapy (ACT), and patient education and self-help materials for military personnel and civilians exposed to trauma.

Trainees at the National Center for PTSD have the opportunity to:

- Learn to conceptualize the after-effects of trauma from a variety of theoretical perspectives—primarily cognitive-behavioral, biological, and interpersonal;
- Gain an understanding of factors that influence implementation of best care practices for PTSD in a national treatment system;
- Learn about effective means of disseminating and training clinicians in PTSD treatments.
- Gain further exposure to PTSD clinical research; and/or,
- Gain experience in evaluating quality of care for PTSD.

The National Center for PTSD has strong collaborative relationships with several other clinical and research programs at the Palo Alto VA, including the Men's Trauma Recovery Program, the Women's Trauma Recovery Program, the PTSD Clinical Team, the Sierra-Pacific Mental Illness Research, Education and Clinical Center (MIRECC), the Center for Innovation to Implementation (Ci2i), the Program Evaluation and Resource Center (PERC), and the Health Economics Research Center (HERC).

**Sierra Pacific Mental Illness Research Education and Clinical Center (MIRECC)
Dementia Core (Building 5, Palo Alto Division)**

Supervisors: Sherry A. Beaudreau, Ph.D., ABPP-Gero
J. Kaci Fairchild, Ph.D., ABPP-Gero
Lisa Kinoshita, Ph.D.
Allyson Rosen, Ph.D., ABPP-CN

Patient population: Persons with cognitive, late-life neuropsychiatric or psychiatric impairment participating in clinical research studies.

Psychology's role: MIRECC researchers in the Dementia Core, which includes psychologists, follow the mission of the center which is research, education, and clinical services aimed at improving the lives of those affected by Alzheimer's Disease, related dementias, Vascular Cognitive Impairment, and mild cognitive impairment. MIRECC investigators are involved in the assessment and treatment of late-life cognitive and psychiatric disorders.

Other professionals and trainees: In addition to psychology, the Sierra Pacific MIRECC at the VA Palo Alto includes a variety of experts in psychiatry, neurology, nursing, and neuroscience. Trainees at all levels participate in MIRECC functions and include bachelor level research assistants, research volunteers, practicum students, psychology interns, and advanced postdoctoral fellows.

Nature of clinical services delivered: This is a clinical research rotation. Clinical contact will be obtained through participant contact through research protocols. Time spent in direct clinical services will be up to 50% of the interns' time on the rotation, and will be based on the interns' clinical geropsychology training needs following the Pike's Peak Model of training (Knight, Karel, Hinrichsen, Qualls, & Duffy, 2009). The Pike's Peak Model of geropsychology training provides a list of competencies that can be used by trainees and their supervisors to ensure training is received in important domains of professional geropsychology. These competencies include methodological issues in conducting or evaluating research in aging. On this rotation, direct service opportunities are integrated with or relevant to the interns' clinical research project. Examples of direct services include neuropsychological and psychiatric assessment with older adults and the provision of evidence based treatments aimed at improving memory, mood, anxiety or other late-life mental health symptoms or psychosocial concerns. Additional opportunities include community outreach and psychoeducation.

Intern's role: Interns complete two main activities under the supervision of a licensed psychologist. 1) Interns participate in integrated clinical service activities as part of a clinical research protocol. 2) Interns develop and implement a research project utilizing existing data from one of the MIRECC's ongoing studies. Over the course of the rotation, interns are expected to develop: 1) advanced clinical competency or achievement of new competencies related to the Pike's Peak Model of geropsychology, 2) clinical expertise in an area related to their research project, and 3) a report of their project that is suitable for presentation at a scientific conference and for presentation in a research forum at the MIRECC. Preparation of a manuscript for peer-reviewed publication or other publication such as a letter to the editor are encouraged, but not required.

Amount/type of supervision: One or two supervisors are assigned to each intern. Supervision will be a minimum of two hours per week with at least one hour of face-to-face individual supervision with the primary supervisor.

Didactics: The VA Advanced Fellowship Program in Mental Illness Research and Education offers weekly didactics on Wednesdays from 10am to noon on academic survival, professional development, manuscript and grant writing, methodology, and biostatistics; attendance by interns is encouraged but not required. The research supervisor and intern may choose to incorporate additional seminars, e.g., Geriatric Psychiatry and Neuroscience Grand Rounds, presentations at Stanford, or study groups. The intern and mentor will determine readings relevant to the chosen research project and areas of interest.

Pace: Rotation supervisors help the intern develop a training plan integrating their clinical and research goals for this rotation. Pace of clinical contact and research progress will be based on these overarching goals.

Use of Digital Mental Health tools: None

The Sierra Pacific MIRECC rotation offers interns ongoing professional development as clinical researchers within the context of a multi-disciplinary translational research center. There are currently ten MIRECCs nationwide with each focusing on mental illnesses or conditions that are common in Veterans. Researchers at the MIRECCs investigate the causes of mental illness, develop new treatments for mental illness, and evaluate both established and new treatments with the goal of identifying best practices.

The Sierra Pacific MIRECC at VA Palo Alto is affiliated with the Stanford University School of Medicine and research mentors are part of the Stanford faculty through the Department of Psychiatry and Behavioral Sciences. The MIRECC Dementia Core's mission is to study the progression of dementia and other cognitive disorders or impairment over time, treatment response, assessment issues, and problems patients and caregivers experience in coping with the changes that occur. We work to develop an integrated body of knowledge about dementia and to help the VA and the broader health care community plan and adapt to changes associated with the rapidly expanding aging population among both Veterans and civilians. Some areas of focus in the MIRECC are on individuals with cognitive impairment and neuropsychiatric symptoms, caregiver skills training, prevention and management of cognitive impairment, prevention of cognitive decline in vascular surgical procedures and chronic vascular risk, late-life psychiatric disorders, neuropsychological test development, and innovative mental health treatment approaches. Secondary foci include sexuality and aging, sleep, and the application of advanced biostatistical techniques.

Interns at MIRECC become involved in activities designed to improve their ability to conduct and interpret clinical aging research and to achieve clinical competencies in accord with the Pike's Peak Model of Clinical Geropsychology training. Interns may receive training in a range of clinical research skills, including program development, quantitative methods, assessment, statistics, data management, and statistical programs such as SPSS. Interns may also receive mentoring on professional development issues, such as: integrating clinical practice experiences and knowledge into translational research questions; clarifying their own research interests and goals; applying for research-related jobs; scientific writing; grant proposal writing; project administration; publishing; and presenting at professional meetings. This rotation may be particularly useful for interns who are planning academic/research careers or are preparing for administrative/clinical roles in which understanding and conducting translational research (e.g., intervention or assessment) is a major professional activity. Goals for this rotation are the following:

Interns will participate in an effective clinical research-oriented work environment. The MIRECC aims to foster intellectual stimulation and research independence. This environment encourages and models effective professional communication among multidisciplinary staff, as well as, collegial mentorship relationships between supervisors and interns. Supervisors also help interns acquire relevant skills, and support the interns in defining and achieving their own training goals in the context of careers in aging research.

Interns will be able to ask effective geropsychological clinical research questions by integrating clinical practice experiences into conceptualization of aging research questions, and analyzing and understanding relevant research literatures.

Interns will develop advanced clinical skills relevant to assessment or treatment of older adults by participating in direct clinical research services. These services integrate the interns' experience by allowing them to directly apply knowledge gained from clinical duties on the rotation to a clinical research question developed in consultation with their supervisor. Interns will develop a training plan based on their clinical aging interests, their training needs with respect to the Pike's Peak Model, and the supervisor's clinical research program. Typically, direct clinical services and the interns' independent research project will be an integrated clinical research experience utilizing larger ongoing projects at the MIRECC.

Interns will develop as professional researchers in aging by clarifying their own research interests in geropsychology, developing collaborative communication skills within multidisciplinary clinical research settings, seeking consultation when appropriate, defining and achieving their own professional goals, and functioning as a productive member of an intellectual community. Supervisors expose interns to networking and service opportunities in the larger clinical geropsychology professional community locally, nationally, and internationally.

Interns will acquire relevant clinical research competencies to select and employ appropriate analytic methods for both cross-sectional and longitudinal aging research, including late life clinical trial research; select, design, and administer valid and reliable instruments for use with older adults; if relevant to the interns' goals, administer evidence based treatments; prepare for presentation at a professional conference or prepare a manuscript for submission to a professional journal.

Recent and ongoing Dementia Core studies at the MIRECC:

Evidence-Based Treatments

- Brief Behavioral Interventions, especially Problem Solving Therapy for Suicide Prevention and for Treating Late-Life Mental Health Disorders: Sherry Beaudreau
- Physical Exercise and Cognitive Training for Persons with Mild Cognitive Impairment: Kaci Fairchild
- Physical Exercise and Caregiver Skills Training for Caregivers: Kaci Fairchild
- Biological, Psychological, and Cognitive Mediators of Treatment Response: Kaci Fairchild & Sherry Beaudreau
- Innovative Statistical and Methodological Techniques for Clinical Aging Research including Randomized Control Trials: Kaci Fairchild & Sherry Beaudreau

Neuroscientific Methods and Neurocognitive Outcomes

- Predictors of Cognitive Decline in Aging Veterans with PTSD: Lisa Kinoshita
- Assessment and Impact of Late-Life Sleep Impairment: Lisa Kinoshita
- The Application of Neuroimaging Techniques to the Study of Cognitive Decline in Individuals with MCI and Dementia: Allyson Rosen
- Long-term Neurocognitive Sequelae of Subclinical Microembolization During Carotid Interventions: Allyson Rosen
- Genetic Moderators of Cognitive Impairment: Sherry Beaudreau & Kaci Fairchild
- Neurocognitive Markers of Late-Life Psychiatric Symptoms and Suicidal Ideation in Older Adults: Sherry Beaudreau

Psychology Training Staff

Psychology Service

Kristina Agbayani, Ph.D., ABPP-CN University of Houston, 2014. Internship: VA Boston Healthcare System 2013-2014 (rehabilitation psychology and neuropsychology). Postdoctoral fellowship: VA Northern California Health Care System 2014-2016 (clinical neuropsychology). Licensed in the state of California, PSY28060. Board Certified in Clinical Neuropsychology (2019) through the American Board of Professional Psychology/American Board of Clinical Neuropsychology. On staff at the VA Palo Alto HCS since 2016. Professional Organizations: American Academy of Clinical Neuropsychology, American Psychological Association (Divisions 22 and 40) and the International Neuropsychological Society. Professional and research Interests: clinical neuropsychology of mild TBI and PTSD, cognitive rehabilitation.

Stephen T. Black, Ph.D., Ph.D. University of California, Santa Cruz (Social & Personality) 1989, Jackson State University (Clinical) 2005. Internship: Mississippi State Hospital, 2004, Post-Doctoral Fellowship: VA Palo Alto HCS (Psychosocial Rehabilitation), California license PSY21055, since 2006, Mississippi license PSY46754, since 2006, Faculty appointment: Clinical Instructor (Affiliated), Department of Psychiatry and Behavioral Sciences, Stanford University School of Medicine. Professional organizations: American Psychological Association, Association for Psychological Science, American Psychology & Law Society, Society for a Scientific Clinical Psychology. Research Interests: Suicide assessment and intervention, Psychosocial rehabilitation for serious mental illness. Theoretical orientation: Behavioral-cognitive, Humanistic.

Kimberly L. Brodsky, Ph.D. University of Colorado, Boulder, 2008. Internship VA Northern California HCS, 2007-2008. Licensed PSY 22956 State of California since 2009. Faculty appointments: Clinical Assistant Professor (Affiliated), Department of Psychiatry and Behavioral Sciences, Stanford University School of Medicine and Co-director of Mental Health Continuing Education Series. Stanford University “Teacher of the Year” Award, 2013. Professional Organizations: American Psychological Association, Association for Behavioral and Cognitive Therapies, International Society for Traumatic Stress Studies. Clinical Interests: Group treatment modalities and interventions, leadership, program development, motivational interviewing and enhancement, ACT, DBT, evidence based treatments for PTSD and substance use disorders, military sexual trauma, mindfulness based interventions, women focused interventions for domestic violence, trauma and addictions, supervision, interprofessional mentorship.

Joelle Broffman, Psy.D. Pepperdine University, 2017. Internship: VA Loma Linda Healthcare System 2016-2017 (APA-Accredited). Postdoctoral Fellowship: VA Palo Alto Health Care System 2017-2019 (Clinical Neuropsychology; 2-Year APA-Accredited). Licensed in California, PSY30413. On staff at VA Palo Alto HCS since 09/2019. Professional memberships: American Psychological Association (Divisions 22 and 40). Professional and research interests: Evaluation and treatment of traumatic brain injury and other acquired brain injury; psychological interventions including mindfulness and acceptance-based approaches; program development and evaluation.

Jean H. Cooney, Ph.D. Pacific Graduate School of Psychology, 2001. Minneapolis VA Internship 1999-2000; VA Palo Alto HCS Post-Doctoral Training 2001-2002; on staff 2000 to present. Licensed (PSY18279), State of California since 2002. Clinical Interests and Background: Evidence Based Treatments for PTSD (PE and CPT), anxiety disorders, developmental trauma, group psychotherapy, Cognitive Behavioral Treatment.

Jessica Cuellar, Ph.D. University of North Carolina at Chapel Hill, 2014. Internship: Medical College of Georgia/Charlie Norwood VA Medical Center, 2013-2014. Postdoctoral Fellowship: VA Palo Alto HCS 2014-2015. VA Palo Alto HCS staff since 2015. Licensure: State of California (PSY27633) since 2015. Professional Organization: American Psychological Association (Divisions 7, 43, 45). Professional/Research Interests: Couple and family therapy, trauma and the family context, parenting/caregiving issues, developmental psychopathology, culturally sensitive treatment, psychology training and supervision.

Nana A. Dawson-Andoh, Ph.D. The Pennsylvania State University, 2016. Internship: San Francisco VA Medical Center, 2014 -2015. Postdoctoral Fellowship in Substance Use/Homelessness Rehabilitation at the VA the Palo Alto Health Care System, 2015 - 2016. Currently a psychologist in Compensated Work Therapy (CWT) program focusing on matching and supporting work ready Veterans in competitive jobs. Professional Organizations: American Psychological Association (Division 45, Society for the Psychological Study of Culture, Ethnicity and Race). Professional interests: Culturally informed treatment for ethnic minorities and underserved clients, multicultural competence and proficiency, evidence based treatments based treatment for substance use disorders.

Stacy M. Dodd, Ph.D., ABPP University of Florida, 2010. Internship, VA Palo Alto HCS (Behavioral Medicine Track) 2009-2010. Postdoctoral Fellowship, VA Palo Alto HCS (Behavioral Medicine Emphasis) 2010-2011. On staff at VA Palo Alto HCS since 2012. Licensed, State of California PSY 24431, since 2011. Board Certified in Clinical Health Psychology. Professional Organizations: American Psychological Association (Division 38), Society of Behavioral Medicine, Association of VA Hematology and Oncology, Northern California Cognitive Behavioral Therapy Network. Professional Interests: Behavioral medicine/health psychology, psychooncology, sexual function, insomnia and sleep disorders, transgender health care, primary care psychology.

William O. Faustman, Ph.D. University of Mississippi, 1983. Internship: VA Palo Alto HCS, 1983, on staff since 1984. California license PSY8777, since 1985. Faculty appointment: Clinical Professor (Affiliated), Department of Psychiatry and Behavioral Sciences, Stanford University School of Medicine. Professional organizations: American Psychological Association (Fellow, Division 28, Psychopharmacology and Substance Abuse), British Psychological Society (Chartered Psychologist in Great Britain, Registry #88137), American Psychological Society, Society of Biological Psychiatry, Society for Neuroscience, Western Psychological Association, Southeastern Psychological Association, Sigma Xi. Research Interests: Biological basis of schizophrenia, neuropsychological impairments in psychotic disorders, clinical drug development of atypical antipsychotic medications.

Margaret Florsheim, Ph.D. Wayne State University, 1988. VA Palo Alto HCS Internship, 1987. Licensed, California PSY11727 since 1990. Professional Organizations: Gerontological Society of America. Research Interests: Older Adult Neuropsychological Functioning, Caregiver stress.

Claire L. Hebenstreit, Ph.D. University of Denver, 2013. Internship: VA Palo Alto HCS, 2012-2013. Postdoctoral fellowship: VA Advanced Fellowship in Women's Health Research, San Francisco VA Medical Center and the University of California San Francisco, 2013-2016. Licensed, State of California PSY28980. Professional Organizations: International Society for Traumatic Stress Studies, Women in Cognitive Science, Association for Psychological Science. Interests: Evidence-based treatments for PTSD, interpersonal and intimate partner violence against women, substance use disorders.

Kimberly E. Hiroto, Ph.D. University of Colorado at Colorado Springs, 2010. Internship VA Palo Alto HCS (Geropsychology emphasis area) 2009-2010. Postdoctoral Fellowship VA Palo Alto HCS (Hospice/Palliative Care focus area) 2010-2011. Licensed, State of California PSY 25320, since 2012. Professional Organizations: American Psychological Association (Society of Clinical Geropsychology).

Professional Interests: training in geropsychology and cultural humility, meaning-making in advanced illness, end-of-life care, the effect of cultural diversity and sociohistorical context in the lives of older adults.

Jennifer S. Ho, Psy.D. Ferkauf Graduate School of Psychology, Yeshiva University, 2018. Internship & Postdoctoral Fellowship: VA Palo Alto HCS (Geropsychology, Palliative Care), 2017-19. Pending license. Professional organizations: Council of Professional Geropsychology Training Programs, APA Div. 12-2 Society of Clinical Geropsychology. Interests: Aging and geropsychology; minority stress and diversity issues; psychodynamic and relational psychotherapy; integrative care services to address mental, chronic, and life-limited illnesses.

Jeanette Hsu, Ph.D., ABPP University of California, Berkeley, 1995. Internship, VA Palo Alto HCS 1994-1995. Postdoctoral fellowship, The Children's Health Council, Palo Alto, 1995-1996. VA Palo Alto HCS staff since 1996. Licensed, State of California PSY15008, since 1997. Board Certified in Clinical Psychology (2020) through the American Board of Professional Psychology/American Board of Clinical Psychology. Clinical Professor (Affiliated), Department of Psychiatry and Behavioral Sciences, Stanford University School of Medicine. 2016 VA Psychology Training Council (VAPTC) Zeiss Award for Outstanding Contributions to VA Psychology Training. Professional Associations: American Psychological Association (Fellow, Division 18; former Executive Committee member, Division 35), Association of Psychology Postdoctoral and Internship Centers (APPIC; former Board Member), Association for Behavioral and Cognitive Therapies, VA Psychology Training Council (former Chair). Professional Interests: Psychology training administration, behavioral medicine/health psychology, addiction treatment, developmental psychopathology, teaching and supervision of multicultural competence.

Emily Hugo, Psy.D. PGSP-Stanford Psy.D. Consortium, 2007. Internship Duke University Medical Center, Cognitive Behavioral Track, 2006-2007. Postdoctoral training Stanford University Department of Psychiatry. Licensed PSY 23245 State of California since 2009. Clinical Interests: Treatment of PTSD and the delivery of associated evidence based treatments including Prolonged Exposure, Cognitive Processing Therapy, and Acceptance and Commitment Therapy. Also intensively trained in Dialectical Behavioral Therapy and interested in the treatment of eating disorders.

Robert Jenkins, Ph.D. University of Nevada, Reno, 1985. VA Palo Alto HCS Internship and Postdoctoral Training, 1984-1986; on staff since 1986. Licensed, State of California, PSY10345 since 1988. Professional Organizations: Association of Black Psychologists, California Psychological Association. Clinical Interests: Cross-Cultural issues in treatment, evidence-based treatment for posttraumatic stress disorder, psychosocial adaptation and functioning, relapse prevention.

Alexandra (Sasha) Jouk, Ph.D. University of Victoria, British Columbia, Canada, 2015 (Clinical Neuropsychology). Internship (Geropsychology emphasis area): VA West Los Angeles Healthcare System, 2014-2015. Postdoctoral Fellowship (Rehabilitation Psychology emphasis area): VA Palo Alto Healthcare System, 2015-2017. Licensed in the State of California PSY29275 since 2017. Professional Organizations: American Psychological Association, Division 22 – Rehabilitation Psychology. Professional Interests: Rehabilitation after disability, aging, family support and caregiving, and training/supervision.

Lisa Kinoshita, Ph.D. Pacific Graduate School of Psychology, 2001. Internship: VA Palo Alto Health Care System, 1999-2000. Postdoctoral Fellowship: Mental Illness Research, Education and Clinical Center, Dementia Research Emphasis, 2001-2003. Licensed, State of California, PSY21916. Professional Organizations: Asian American Psychological Association, American Psychological Association, International Neuropsychological Society. Professional and Research Interests: neuropsychology, geropsychology, Asian American psychology, predictors of cognitive decline, cognitive disorders, dementia, posttraumatic stress disorder, sleep disorders.

Dan Koehler, Psy.D. The Wright Institute, 2017. Internship: VA North Texas Health Care System 2016-2017 (medical psychology track). Postdoctoral fellowship: VA Palo Alto Health Care System 2017-2019 (Rehabilitation Psychology). Licensed in the State of California PSY30854 since 2019. Professional Organizations: American Psychological Association (Divisions 22 and 40), Academy of Spinal Cord Injury Professionals (ASCIP). Professional and Research Interests: Neurorehabilitation, adjustment to disability, coping effectiveness, and community reintegration following stroke, TBI, and SCI/D (including MS and ALS); Enhancing treatment outcomes via interdisciplinary cotreatment interventions.

Jaclyn Kraemer, Ph.D. Palo Alto University, 2013. Internship: Missouri Health Sciences Psychology Consortium at the Harry S. Truman Veterans' Hospital in Columbia, Missouri, 2012-2013. Post-doctoral fellowship: Palo Alto VA Health Care System, 2013-2014. On staff in the Trauma Recovery Services since August 2014. Licensed (PSY26612) in the State of California since 2014. The SUD-PTSD Specialist for Palo Alto VA Health Care System. Professional Organization: American Psychological Association. Professional Interests: Evidence-based treatments for posttraumatic stress disorder and trauma (Prolonged Exposure and Cognitive Processing Therapy and Concurrent Treatment of PTSD and SUD using Prolonged Exposure [COPE]), substance use disorders (CBT, Dialectical Behavior Therapy, and Contingency Management), and co-occurring diagnoses (DBT); group psychotherapy; and program development/implementation.

Madhur Kulkarni, Ph.D. University of Michigan, 2010. Internship: VA Palo Alto Healthcare System (VAPAHCS), 2010. Joint Postdoctoral Fellowship: Center for Innovation to Implementation, Health Services Research and Development, VAPAHCS and Department of Psychiatry and Behavioral Sciences, Stanford University School of Medicine, 2012. California License: PSY 26959 since 2015. Currently a psychologist on the PTSD Clinical Team. Clinical and Professional Interests: Treatment of PTSD through treatments including Prolonged Exposure, Cognitive Processing Therapy, and Acceptance and Commitment Therapy, as well as treatments for cooccurring PTSD-Substance use disorders. Also intensively trained in Motivational Interviewing, Interpersonal Therapy, and Skills Training for Affective and Interpersonal Regulation (STAIR). Co-authored STAIR patient manual for Veterans. Strong interest in providing culturally-sensitive treatment to ethnic minorities and underserved clients and developing multicultural competence and proficiency in supervisees.

Geoffrey W. Lane, Ph.D., ABPP-Gero Pacific Graduate School of Psychology, 2004. Geropsychology internship: University of Medicine and Dentistry of New Jersey, 2004-2005. Geropsychology postdoctoral fellowship, University of Rochester Medical Center, 2005-2006. Licensed, state of California PSY20829. Consultant, Institute on Aging, San Francisco CA, 2006-present. Neuropsychologist, Rehab Without Walls, San Jose CA, 2009-2015, Psychological Consultant, Avenidas Adult Day Health Program. Professional Organizations: American Psychological Association, Psychologists in Long Term Care. Professional and research interests: Neuropsychological assessment in geriatric populations, long term care psychology, technological innovations in long term care, program development and program evaluation in long term care settings, behavior management in dementia care.

Bruce Linenberg, Ph.D. Georgia State University, 1990. Internship VAMC Palo Alto, 1988-89. Licensed, California, 1992, PSY12683. Clinical Associate Professor (Affiliated), Psychiatry and Behavioral Sciences, Stanford University Medical Center. Professional Organizations: American Psychological Association, San Mateo County Psychological Association, Society for Exploration of Psychotherapy Integration. Interests: Psychotherapy integration; integration of philosophy and the humanities with clinical work; Interpersonal psychodynamic, existential, experiential, recovery and systems perspectives; Phenomenological research.

Dorene Loew, Ph.D. University of Vermont, 1987. Internship VA Palo Alto HCS 1986-87. Post-internship employment at the San Francisco VA and UCSF prior to returning to VA Palo Alto in 1989.

Licensed, State of California PSY11325, since 1997. Professional Organization: American Psychological Association; International Society for Traumatic Stress Studies. Professional Interests: Treatment of PTSD and co-occurring disorders through evidence-based interventions including PE, CPT, CBT for SUDs, and DBT. Mindfulness and compassion-based interventions, especially addressing PTSD and/or moral injury.

Jessica A. Lohnberg, Ph.D. University of Iowa, 2011. Internship: VA Long Beach Healthcare System, 2010-2011. Postdoctoral Fellowship (Behavioral Medicine emphasis): VA Palo Alto Health Care System, 2011-2012. Licensed, State of California PSY25097, since 2012. Faculty appointment: Clinical Professor (Affiliated), Department of Psychiatry and Behavioral Sciences, Stanford University School of Medicine. Professional Organizations: American Psychological Association (APA Divisions 17, 18, and 38), Society of Behavioral Medicine (SBM). Professional and research interests: Chronic pain, posttraumatic growth after cancer, health behavior change (e.g., smoking cessation & weight loss), biofeedback, bariatric surgery, interdisciplinary program evaluation and process improvement, supervision and training, adherence, pre-surgical psychological assessment (e.g., bariatric surgery evals, transplant evals, spinal cord stimulator evals), and coping with chronic illness.

Jennifer Loughlin, Ph.D. Palo Alto University, 2012. Internship: Minneapolis VA, 2010-2011. Postdoctoral fellowship (neurorehabilitation emphasis): Barrow Neurological Institute (Phoenix), 2012-2014. Neuropsychologist at the Barrow Neurological Institute from 2014-2016. On staff at the Palo Alto VA since 2016. Licensed, State of Arizona since 2014. Professional Organizations: American Psychological Association (Divisions 22 and 40) and the National Academy of Neuropsychology. Professional and Research Interests: neurorehabilitation, post-TBI adjustment, community reintegration, and outcomes.

Steven Lovett, Ph.D. Virginia Polytechnic Institute and State University, VA Palo Alto HCS since 1984. Licensed, State of California PSY8565 since 1984. Assistant Professor, Pacific Graduate School of Psychology. Professional Organizations: American Psychological Association, Association of VA Psychologist Leaders (past President), Gerontological Society of America, Sigma Xi: The Research Organization of America. Research Interests: Coping with chronic disease and disability in older adults, stress and coping in caregivers of older adults, depression and the elderly.

Kacey Marton, Ph.D. Pacific Graduate School of Psychology/Palo Alto University, 2018. Internship: VA Palo Alto HCS (Neuropsychology Track), 2017-2018. Postdoctoral Fellowship: VA Palo Alto HCS (Neuropsychology, APA Specialty-Accredited), 2018-2020. Licensed in California, PSY 31241. On staff at VAPA HCS since 2020. Professional Organizations: American Psychological Association (Divisions 40 and 22), International Neuropsychological Society, National Academy of Neuropsychology, Northern California Neuropsychology Forum. Professional and Research Interests: neurorehabilitation, functional assessment and ecological validity, use of technology to increase access to care, program development.

James Mazzone, Ph.D. Pacific Graduate School of Psychology, Palo Alto, 2007. Internship, Central Arkansas VA Healthcare System 2006-2007. Postdoctoral fellowship, The VA Palo Alto Health Care System, 2007-2008. VA Palo Alto Health Care System staff since 2008. Licensed, State of California PSY22067, since 2008. Professional Affiliations: American Psychological Association and Sigma Xi, The Scientific Research Society. Professional Interests: Integrated medical and mental health treatment; alcohol and substance abuse; physical and psychological trauma; high-risk and disabled populations and; lifestyle, health risk behaviors, and aging.

Joshua McKeever, Ph.D. Drexel University, 2014. Internship: University of Washington 2013-2014 (Behavioral Medicine/Neuropsychology track). Postdoctoral fellowship: VA Palo Alto Health Care System 2014-2016 (Rehabilitation Psychology emphasis area). Licensed in the State of California PSY28168 since 2016. Professional Organizations: American Psychological Association (Divisions 22 and 40), Northern

California Neuropsychology Forum, International Neuropsychological Society. Professional and Research Interests: Memory disorders, neurocognitive rehabilitation, adjustment to disability following neurological and physical illness and injury, post-traumatic growth, primary and specialty care integration.

Elisabeth McKenna, Ph.D. Palo Alto University (formerly Pacific Graduate School of Psychology) Palo Alto, CA, 1997, VAPAHCs since 2010. Licensed, State of California PSY 16746 since 2000. Psychology Internship: University of Virginia (1995-96), Postdoctoral Fellowship: Kaiser Santa Clara Child & Adolescent Psychiatry (1997-98). Professional Interests Include: PTSD, TBI, Behavioral Medicine, Family Therapy, and Adoption.

Elaine S. McMillan, Ph.D. University of Maine, 2008. Internship: VA Medical Center, Durham, NC 2007-2008. Postdoctoral Fellowship (Palliative Care emphasis area): VA Palo Alto HCS 2008-2009. On staff since 2009. Licensed, State of California PSY23530 since 2010. Professional/research interests: Caregiver support and education, adjustment to chronic illness, cognitive-behavioral therapy with older adults, palliative care and hospice, behavioral medicine.

Melissa A. Mendoza, Psy.D. University of La Verne, 2015. Internship: Boston Consortium, 2014-2015. Postdoctoral Fellowship (Psychosocial Rehabilitation emphasis area) VA Palo Alto HCS 2015-2016. Professional Organizations: American Psychological Association (Division 56, Trauma Psychology; Division 41, Law Society), Association for Behavioral and Cognitive Therapies, International Society for Traumatic Stress Studies. Professional Interests: Implementation of evidence based interventions for individuals recovering from severe and persistent mental illness, traumatic stress exposure, substance abuse, and pervasive emotion dysregulation deficits; promotion of recovery-oriented principles to facilitate positive psychosocial outcomes, resilience, and successful community reintegration; consultation to interdisciplinary treatment teams to inform systemic changes that promote recovery.

Susan Mirch-Kretschmann, Ph.D. Yale University, 2004. Internship: VA Palo Alto Health Care System (Behavioral Medicine emphasis) 2002-2003. Post-doctoral Psychosocial Rehabilitation Fellow: VA Palo Alto HCS, 2003-2004. Consultant for VA Palo Alto HCS 2004-2005. Licensed State of California PSY2256, Certified Psychiatric Rehabilitation Provider since 2004, National Master Trainer for CBT-SUD and Consultant for VA MI training initiative. Professional Organizations: Association of Behavioral and Cognitive Therapies, Association of VA Psychology Leaders, Association for Psychological Science, Motivational Interviewing Network of Trainers. Clinical Interests: Dissemination and Implementation Science for evidence-based practices in mental health and substance use disorders, teaching and training staff in EBPs, program development and outcome measurement, empirically based treatments for co-occurring disorders Research Interests: Care provider factors in health/mental health disparities, development of staff trainings to reduce these disparities, multicultural training and competency, stigma, motivation, emotion, recovery-oriented interventions and treatment planning, program outcome, and implementation science.

James Moses, Ph.D., ABPP-CN University of Colorado, Boulder, 1974. Dual internship at Fort Miley (San Francisco) VAMC and Palo Alto VAMC, 1973-74; VA Palo Alto HCS since 1974. Licensed California PSY4428 since 1975. Licensed New Mexico #1053, since 2008. Diplomate, American Board of Professional Psychology in Clinical Psychology (2003) and Clinical Neuropsychology (2006). Diplomate, American Board of Professional Neuropsychology, 1990. Adjunct Clinical Professor Emeritus of Psychiatry and Behavioral Sciences, Stanford University School of Medicine (since 2005). Editorial Board Member, Archives of Clinical Neuropsychology. Professional Organizations: American Psychological Association, American Association for the Advancement of Science, Society for Personality Assessment, International Neuropsychological Society, National Academy of Neuropsychology. Research Interests: Diagnostic clinical neuropsychology, cognitive psychology, psychopathology of depression, schizophrenia.

Hong Nguyen, Ph.D. University of Washington, 2014. Clinical internship VA Palo Alto HCS, 2013-2014. Post-doctoral fellowship San Francisco VA HCS, 2014-2015. Licensed Clinical Psychologist, state of Washington since 2015. Professional organizations: International Society for Traumatic Stress Studies, American Psychological Association, Association for Behavioral and Cognitive Therapies, and International OCD Foundation. Clinical and research interests: training and dissemination of Dialectical Behavior Therapy, complex PTSD, partner violence, substance use, anxiety disorders, and issues of diversity in research, treatment provision, and training.

Melissa O'Donnell, Psy.D. PGSP-Stanford Psy.D. Consortium, 2018. Internship VA Los Angeles Ambulatory Care Center, 2017-2018. Postdoctoral training VA Palo Alto HCS (Continuum of Care for Addictive Behaviors, Trauma, and Co-occurring Disorders), 2018-19. Licensed PSY 31277 State of California since 2019. Professional Organizations: American Psychological Association (Division 50, Society of Addiction Psychology), Clinical Interests: Evidence-based practices for addiction treatment, trauma, risk and resilience, shame and self-stigma for addiction and other marginalized populations, Acceptance and Commitment Therapy, as well as Mindfulness and Self-Compassion interventions.

Priti Parekh, Ph.D. Duke University, 2001. Internship, Durham VAMC 2000-2001. Postdoctoral fellowship, Duke University Medical Center in the Division of Behavioral Medicine, 2001-2003. Licensed, State of Maryland #04098 since 2004. Professional affiliations: Division 38 of the American Psychological Association, Maryland Psychological Association. Professional and research interests: psychological and behavioral factors in medical illness, presurgical psychological assessment, chronic pain, HIV, and diabetes.

Carey Pawlowski, PhD, ABPP-RP University of Nebraska-Lincoln, 2002. Internship VA New Mexico HCS, 2001-2002. Postdoctoral fellowship VA Pittsburgh HCS, 2002-2003. Licensed since 2003, state of Missouri (#2003030099) and state of California since 2012 (#25268). Neurorehabilitation psychologist at The Rehabilitation Institute of Kansas City 2003 – 2008. Staff Rehabilitation psychologist with the Polytrauma Transitional Rehabilitation Program (PTRP) at the VA Palo Alto HCS since 2008. Board Certified Rehabilitation Psychologist (#8092) through the American Board of Professional Psychology (ABPP)/American Board of Rehabilitation Psychology (ABRP); Certified Brain Injury Specialist Trainer (CBIST #11633). Professional Organizations: American Psychological Association, Divisions 18, 22, and 40; National Academy of Neuropsychology. Clinical and research interests: rehabilitation psychology; clinical neuropsychology; functional outcomes after acquired or traumatic brain injury; adjustment to disability; post-traumatic growth; behavioral pain management; cognitively modified, evidence-based approach to treating combat stress/PTSD.

Laura J. Peters, Ph.D. University, of Utah 1988. VA Palo Alto HCS internship, 1986; VA staff member since 1986. Licensed State of California PSY11247 since 1989. Professional Organizations: American Psychological Association. Research Interests: Family Caregiver Stress, Cognitive Screening of Blind Veterans. Member of VAPAHCS Clinical Bioethics Committee, WBRC Education Committee and Leadership Team, Mediator with VAPAHCS Alternative Dispute Resolution Program.

Kendra Ractliffe, Ph.D. University of South Dakota, 2013. Clinical internship VA Palo Alto HCS, 2012-2013, Post-doctoral fellowship San Francisco VA HCS, 2013-2014. Licensed Clinical Psychologist, State of California PSY 27201 since 2015.
